As previously reported, Congress mandated the switch to digital to free up spectrum for new wireless services. Off-air viewers will need to get a converter box or upgrade to a digital TV set. Cable and satellite TV subscribers should not notice a difference as any digital conversion is handled by the delivery provider. (Adapted from various published reports)

HAM RADIO IN SPACE: AO-16 ON FOR NOW IN BENT PIPE MODE

The temperature on board the AMSAT Oscar 16 ham satellite has come up enough so that the watchdog timing problem has gone away. On September 1st, Amsat North America Vice President for Operations, Drew Glassbrenner, KO4MA, turned the satellite on. He then and commanded it into bent pipe mode. As a result, AO-16 now operates as a cross mode, cross band voice repeater, with an uplink on 145.920 FM. The downlink is reduced carrier AM, similar to double sideband, on 437.026. Most stations find receiving the downlink on USB works best.

Work is continuing to predict how long this latest period of operation may last, but initial estimates are around 2-3 months total. There may not be another opportunity to use AO-16 after this one. This is because the satellite will generally head towards longer eclipses and lower temperatures for several years. (ANS)

WORLDBEAT - EUROPE: NI-CAD BATTERIES TO BE BANNED IN EUROPE

Ni-Cad batteries will soon be a thing of the past in Europe. On September 26th a new Europen Union directive comes into force preventing the importation of Ni-Cad and certain other batteries into Europe.

In April of 2004 the European parliament voted to ban Nickel-Cadmium batteries based on them being an ecological hazard. At that time the parliament also adopted restrictions on the use of lead in batteries. It says the lead content can be fully replaced by environmentally preferable Alkaline Manganese batteries.

And what about the impact of this ban on ham radio gear? According to information from Icom U-K, Ni-Cd batteries for their equipment will only be available until its stocks are exhausted. Icom says that alternative types of battery for current equipment have been available for some time, so there should be no problem in finding an substitute.

But Icom U-K says that for older equipment where Ni-Cd was the only type of battery available, replacements may not be available. (Southgate, European Public Health Alliance)

CONTEST CALANDER: CQ WW DX CONTESTS IN OCTOBER

Turning to news from the world of radio sporting, word that the 2008 CQ World Wide DX Contests take place the last two weekends next month.. The phone portion of the contest is October 25th to the 26th while the C-W event is October 29th to the 30th. Both contests run from 0000 U-T-C on Saturday to 2400 U-T-C on Sunday. More information and complete contest rules can be found beginning on page 94 of the September issue of CQ Magazine or on the web at www.cq-amateur-radio.com. (DXNL)

**

CONTEST CALANDER: 2007 SEPT VHF CONTEST CERTIFICATES MAILED OUT

Also, ARRL Contest Branch Manager Sean Kutzko, KX9X Certificates for the 2007 September VHF QSO Party have been mailed out. Certificate winners should receive them just in time to use as motivation to do well in the 2008 running of the same event. (VHF Reflector)

DX

In DX, word that the DX Magazine's 2008 Most Wanted Survey is now up and ready to collect data on the publications website. The publishers are encouraging those interested to submit their needed countries lists to because this is the primary survey that DXpedition planners use to decide where to go. To cast your votes go to www.dxpub.com and click on 2008 survey. The results will be published in the January/February 2009 issue of The DX Magazine.

On the air, listen out for EA7ATX and EA7AY operating as HK1AT from Columbia for the next several weeks. An activation of San Bernardo Island is planned for September 14th through 19th. QSL direct only via EA7ATX.

The SV-DX-Group will be active from Limnos Island in Northern Aaegaein through mid-September as SY8L. Listen out for them on 160 through 8 meters using all modes. QSL via SV2DGH.

A team of 8 Korean operators will be active from Tok Island in the Sea of Japan between September 13th to the 18th. They will be using the special call D9D. QSL as directed on the air,

Lastly, DL7UFN and DL7VEE will operate from Paraguay portable Zed-P-6 through the 14th of January 2009. The pair will hit the airwaves in the capital Asuncion on 160 through 10 meters using CW, SSB, RTTY and PSK at the station facilities of ZP5AZL. QSLs via their home calls, either direct or via the bureau.

(Above from various DX news sources)

THAT FINAL ITEM: THE 2008 WORLD ARDF CHAMPIONSHIP GAMES

And finally this week, the 2008 summer Olympics are over and so is this year's world championships of radio direction finding games. And in the latter team USA brought home a medal. Newsline's Joe Moell K0OV has the details:

--

Members of ARDF Team USA are returning from the 14th World Championships of Amateur Radio Direction Finding, held in a resort community near Seoul, Korea. Ten competitors from 7 states, plus two officials and a visitor, traveled to Korea to take on about 330 competitors from two dozen other countries. As always, the eastern European and former Soviet bloc countries took most of the awards, but this year, for the first time, a North American team member medaled in one of the five age divisions for males. It was George Neal KF6YKN, who won a bronze medal in the category for men ages 50-59 during the two meter competition on September 4. He found all four of his required transmitters in 1:23:42, about five minutes longer than the gold medal winner took. The route he chose was a little over six kilometers long.

USA has been represented at the biennial ARDF World Championships since 1998 and our performance continues to improve, thanks to an increasing number of training sessions around the country. This is the second consecutive World Championships in which the USA has brought home a medal. At the World Championships in the forests of Bulgaria in 2006, Nadia Scharlau of North Carolina won bronze in the 80-meter contest.

As the team members return home, more photos and results are becoming available. See the latest at the "Homing In" Web site, www.homingin.com, where you will also learn how you and your family can begin enjoying the fun of on-foot hidden transmitter hunting. That's homingin, as one word, homingin.com.

From southern California, where we will welcome the team members back with a special ARDF event for beginners and experts on September 20, this is Joe Moell, K-zero-O-V for Amateur Radio Newsline.

--

Our congratulations to all who took part in this years Amateur Radio Direction Finding world championship games. (K0OV)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the

Amateur Radio Newsline(tm). Our e-mail address is
newsline@arnewsline.org. More information is available at Amateur Radio
Newsline's(tm) only official website located at www.arnewsline.org. You can
also write to us or support us at Amateur Radio Newsline(tm), P.O. Box
660937,
Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jeff Clark,
K8JAC, saying 73 and we thank you for listening.

ATTENTION ALL AMATEURS: With Hurricane Ike fast approaching landfall in
the Gulf Coast area, Net operations in the upper portions of 80, 40 and
20 meters have been activated. The ARRL asks Amateur Radio operators to
be considerate of these Nets -- if you are asked to change frequencies
because you're on a Net for Hurricane Ike operations, please cooperate.

==> HURRICANE IKE EYEING GALVESTON ISLAND

Hurricane Ike -- currently a Category 2 hurricane, but expected to reach
Category 3 status sometime today -- is poised to make landfall near
Galveston Island around 3 AM early Saturday, if it keeps on its current
track and speed. Hams in Texas and Louisiana have had a bit of a
breather since Hurricane Gustav
<http://www.arrl.org/news/stories/2008/09/03/10311/?nc=1> came through
```

two weeks ago. ARRL Section leadership in Texas, Louisiana, Oklahoma, Mississippi and Arkansas reported in ongoing conference calls with ARRL Headquarters that they are ready for Ike.

* South Texas

According to ARRL South Texas Section Emergency Coordinator Mike Schwartz, KG5TL, the following counties in South Texas have received mandatory evacuation orders: San Patricio, Aransas, Matagorda, Brazoria, Galveston, Chambers, Jefferson, Hardin and Orange. Calhoun, Victoria and Jackson have been issued voluntary evacuation orders, while certain ZIP codes in Harris County -- home of Houston, the country's fourth largest city -- received mandatory evacuation orders. Schwartz said that Emergency Management Officials in New Braunfels have requested Amateur Radio communications support.

"People are heading out of town, up Interstate 45, out of Houston, and Interstate 290, to San Antonio," Schwartz said. Austin, the state capital, is in the South Texas Section, and Schwartz said that that city will serve as the State's marshalling center. Schwartz also reported that ARES and RACES groups have been working in tandem "very well" with each other.

In September 1900, Galveston experienced the worst hurricane (a Category 4 storm in today's measurements) -- some say the worst natural disaster -- in US history; more than 8000 people perished in that storm <http://www.1900storm.com/>.

* North Texas

In ARRL's North Texas Section, Section Emergency Coordinator Bill Swan, K5MWC, said approximately 15 American Red Cross shelters are already open. "ARES members will be providing communications at these locations," he said. "Many coastal residents escaping from Ike are expected to head up to the North Texas Section."

According to Swan, Emergency Management Agencies in the Section will move up to Condition 3 -- an alert status -- as soon as the storm comes through. "Right now, there are agreements in place throughout the area for county-to-county aid."

Amateur Radio operators are providing support to FEMA Region VI during Hurricane Ike, Swan said, "through the establishment of a coordination communications link that state agencies can request FEMA support, as well as to respond to requests from FEMA for information that agencies can use in their response to those impacted by Hurricane Ike." FEMA Region VI covers the states of Texas, Arkansas, Oklahoma, New Mexico and Louisiana. "FEMA has been very pleased with the activity and support of Amateur Radio here in the North Texas Section," Swan said.

Swan said that the coordination link "will provide the basis for future interfaces with FEMA as the amateur community in Region VI seeks ways to provide support as a part of the National Response Framework,

specifically to the Emergency Support Function #2 of that Framework that deals with communications. It will also serve to identify those areas where Amateur Radio can provide a service to FEMA. The role of Amateur Radio is still evolving, but it is clear that the amateur community can assist in providing interoperability between agencies at the local, state and national level." A 2 meter link has been opened to FEMA Regional Headquarters in Denton, just north of Dallas.

* West Texas

ARRL West Texas Section Manager John Dyer, AE5B, said that while his Section isn't expected to feel the storm as his counterparts in the other two Sections will, hams in West Texas are ready for whatever is needed. He said that three shelters for those with special medical needs are being set up in the West Texas Section in Lubbock, El Paso and Amarillo, as well as Oklahoma. "The State is considering using the airport in Midland as a way to get in and out of the area. With the storm coming in, they don't think that the airports in Dallas [NTX] or Houston [STX] will be very usable."

Section Emergency Coordinator for the ARRL West Texas Section J. T. Caldwell, WA5ZFH, reported that portions of Presidio County are more than 11 feet above flood stage after persistant rains over the last few days. Presidio County sits on the banks of the Rio Grande, the natural border that separates Texas from Mexico. "Reservoirs in Mexico are 106 percent full," Caldwell said, "and authorities there are dumping water from their reservoirs that feed into the Rio Grande, and we are looking at that to cause some major flooding."

Public Information Officer Steven Polunsky, KE5GDR, reported that the water being released into the Rio Grande is causing major problems. "We do not know at this point how long the release [from the reservoirs to the Rio Grande] will continue," he said. "It is creating a hazardous situation affecting Presidio and Brewster Counties. Redford, a town in Presidio County, has been isolated for three days. Food is being airdropped. The road to Lajitas is under five feet of water."

Lubbock, Caldwell said, is being "inundated with remnants of Tropical Depression Lowell in the Pacific," and there is "some concern" how much rain the area will receive when the storms meet up with each other. "The ground here is completely saturated. We're in trouble if we get rains from Hurricane Ike. It could turn into a severe flooding event, since the water has virtually no place to go," he said.

* Louisiana

In Louisiana, Section Manager Gary Stratton, K5GLS, said that Cameron Parish is "completely underwater," and that mandatory evacuation orders have been issued for Cameron, Calcasieu, Lafayette, Iberia, Lafourche, Jefferson and St Bernard Parishes; Beauregard, Allen, St Martin, Iberville, St Mary, Livingston, Terrebonne and Plaquemines Parishes have receive voluntary evacuation orders.

"Eighteen shelters, including a special needs shelter in Shreveport, have been opened," Stratton reported. "ARES is providing communications support in each of these shelters."

* Arkansas

Arkansas Section Manager Dave Norris, K5UZ, said his main concern is flooding. "The ground here is over saturated from Hurricane Gustav," he said. "In tracking the storm, we're on the 'bad side' of it. Tornados are a big concern, so SKYWARN is in a 'wait and see' mode and doing what we can to get everything prepared."

Amateurs in the Arkansas Section are on standby, waiting to see if their assistance is needed in the Louisiana and South Texas Sections, Norris said.

* Mississippi

Mississippi Section Manager Malcolm Keown, W5XX, reported that there is one shelter open on the coast, but there has not been a request for Amateur Radio support for that shelter. "Hancock County - the county closest to Louisiana on the coast - has been issued mandatory evacuation orders, and the National Guard has been deployed to assist with anything needed down there," Keown said. "Highway 90, which runs parallel to the coast, has been closed."

* Oklahoma

Oklahoma Section manager John Thomason, WB5SYT, said he has been in contact with that state's Emergency Operations Center. "We have two concerns right now in Oklahoma," he said, "Flooding and preparations to host evacuees fleeing Ike. We're in a state of readiness." Saying that the governor has declared a state of emergency, Thomason said that Oklahoma Section leadership is in contact with the Salvation Army and American Red Cross.

* Hurricane Ike's Progress

At 10 AM (CDT) Friday, the National Hurricane Center (NHC) reported that Ike was heading toward the west-northwest near 12 MPH, with its center about 295 miles east of Corpus Christi, Texas and about 195 miles southeast of Galveston, Texas. A turn toward the northwest is expected later today, with a turn toward the north expected on Saturday. Forecasters at the NHC said that Ike's center will be very near the upper Texas coast by late Friday or early Saturday. Because Ike is a very large tropical cyclone, weather will begin to deteriorate along the coastline soon.

Isolated tornadoes are possible on Friday over portions of Southern Louisiana and extreme Southern Mississippi, the National Weather Service said. Isolated tornadoes are possible Friday night over portions of Southwestern Louisiana and Southeastern Texas.

If Ike keeps on its current track, forecasters are calling for the storm to make landfall along the Central Texas coast early Saturday morning as

a major hurricane. A hurricane warning is in effect from Morgan City, Louisiana, to Baffin Bay, Texas. A tropical storm warning remains in effect south of Baffin Bay to Port Mansfield, Texas. A tropical storm warning is also in effect from east of Morgan City to the Mississippi-Alabama border, including the city of New Orleans and Lake Pontchartrain.

==> TROPICAL STORM HANNA MADE PRESENCE ON KNOWN EASTERN SEABOARD

Tropical Storm Hanna made its way up the East Coast of the United States, making landfall on the North/South Carolina border at 3:15 AM (EDT) Saturday, September 6. The storm produced tropical storm-force winds gusts, with some locations experiencing sustained tropical storm-force winds. Amateur Radio operators in the Carolinas and northward were prepared for the storm.

According to ARRL North Carolina Section Manager Tim Slay, N4IB, hams in his state were ready for Hanna, with personnel in place at the Amateur Radio Station at the State Emergency Operations Center. Slay said plans called for the hams to start operating from there Friday evening, going until about mid-day on Saturday when the EOC was secured at 12:30 PM.

The Tarheel Emergency Net, North Carolina's HF ARES Net that meets on 3.923 MHz, was on stand-by status Friday night, going active at 6 AM Saturday. North Carolina Section Emergency Coordinator Bernard Nobles, WA4MOK, said the Net remained active "until Emergency Management [officials] release Amateur Radio. The Tarheel Net received reports from across the state, mostly about the amounts of rainfall, which are anywhere from 1 to 5 inches."

Nobles said that the Amateur Radio station at the North Carolina Eastern Branch Emergency Operations Center in Kinston began operations at 6 AM Saturday. Later that morning, the EOC lost commercial power and the amateur station went on battery power until power was restored, about an hour later. Operations at the Eastern Branch were secured around noon.

According to Nobles, Hanna has not been as bad as expected, but there were several thousand people without power in North Carolina's coastal region. "We have been incredibly fortunate," North Carolina Emergency Management spokeswoman Jill Lucas said. "We have had no significant damage. We have had some trees down and local flooding, but nothing significant."

ARRL South Carolina Section Emergency Coordinator Charlie Miller, AE4UX, reported that on Friday evening, the South Carolina Emergency Management Division had the State Emergency Operations Center at Operations Condition 1 (OPCON 1) -- the highest level of alert -- with the SEOC manned 24 hours a day. "All normal communications modes are functioning," he said. At 9:30 AM on Saturday, the SEOC closed and all county EOCs returned to normal operations. "During Hanna, no communications outages -- beyond normal day-to-day outages -- were reported," he said.

On Saturday, "Port buoys are being inspected by the Coast Guard, and all three South Carolina ports are anticipated to be opened this morning," Miller said. "During Hanna, 22 Red Cross shelters received 650 people; eight people sought shelter in a shelter designated for 'special medical needs.'"

Miller said that there were no reports of injuries or "significant damage" in South Carolina.

ARRL Sections up the coast to Maine were notified on Friday on reporting protocols if ARES was activated in response to Hanna. From Friday evening throughout Saturday, status reports were received from the Eastern Massachusetts, Eastern New York, New York-Long Island, Northern New Jersey, Southern New Jersey and Virginia Sections.

==> ARRL PRESENTS NEW MEMBERSHIP BENEFIT

With just a mouse click or two, ARRL members can now access the online QST magazine archive <http://www.arrl.org/members-only/qqnsearch.html>. This new benefit -- a service of the ARRL Technical Information Service (TIS) <http://www.arrl.org/tis/> -- provides PDF copies of all QST articles from December 1915 through December 2004, enabling members to view and print their favorite article, project and more. For many years, the TIS has provided members with assistance researching ARRL periodicals and publications, as well as providing members and non-members with article reprints for a small fee. Access to the new online digital QST archive is free for ARRL members, and is for their personal use only -- material in the archive may not be freely distributed or copied.

"Having access to every issue of QST through 2004 is absolutely incredible!" said ARRL Lab Manager Ed Hare, W1RFI. "The best of the best of QST from every era is now at the fingertips of every ARRL member with a keyboard and an Internet connection. Members can research articles on any subject that interests them, or just browse the past issues. This will be a popular membership benefit that will be of special value to new and long-time hams alike. This valuable content will help radio amateurs who use QST as a technical resource -- for projects, equipment 'hints and kinks' -- and for other research contributing to the advancement of the radio art. We know many hams will simply enjoy perusing these pages of history, too."

The ARRL Periodicals Archive and Search lists every article for QST from 1915 to the present, QEX from 1981 to the present, Ham Radio from 1968 to 1990 and NCJ from 1973 to the present (please note that beginning in 1998, each issue of QEX covers two months). Only ARRL members will be able to download and print copies of the QST articles.

QST magazine is the official journal of ARRL, the national association for Amateur Radio. An interest in Amateur Radio is the only essential qualification of membership. ARRL membership is $39 per year in the US. For a complete list of membership benefits and dues, please visit the ARRL Membership Web page <http://www.arrl.org/join>.

==> 2008 FIELD DAY LOGS RECEIVED, POSTED ONLINE

All 2008 Field Day logs that have been received have been posted to the Claimed Scores page <http://www.arrl.org/contests/claimed> on the ARRL Web site. They reflect all applications sent from the b4h.net Web applet <http://b4h.net/cabforms/>, as well as those received via the US Postal Service and usable electronic submissions sent via regular e-mail (non-Web applet submissions).

According to Field Day Manager Dan Henderson, N1ND, "In some cases we did not receive sufficient information, so we can't post them at this time. A follow-up e-mail was sent to those concerned that included a blank summary sheet and a request to please complete the form and resubmit. In cases where we have not heard back from those requests, the entries are currently not on the list and can't be included until complete information is received back by the ARRL."

Those with missing entries, who have questions or who find errors in their listing should contact Henderson via e-mail <n1nd@arrl.org> or by phone at 860-594-0236 after Tuesday, September 16. When you call, please have your receipt number available -- if sent via the b4h.net Web applet -- or other means to verify the submission was made before the July 29 deadline.

==> IEEE SECTION TO HONOR FIRST VOICE TRANSMISSION

On Saturday, September 13, the Boston Section of the Institute of Electrical and Electronic Engineers (IEEE) <http://www.ieee.org/> will commemorate the first wireless radio broadcast in 1906 by Reginald A. Fessenden at Brant Rock, Massachusetts. IEEE members will award an IEEE Milestone in Electrical Engineering and Computing in recognition of this landmark innovation <http://www.ieee.org/web/aboutus/history_center/milestones_intro.html>.

IEEE President Lewis Terman will be on hand to award the IEEE Milestone Plaque during a one-day program honoring early radio innovations and commemorating the accomplishments at Brant Rock. The award ceremony will take place in Marshfield, close to where the original radio tower once stood. After welcoming remarks, there will be a presentation by radio historian Jack Belrose, VE2CV; Belrose, recipient of the Radio Club of America's Armstrong Medal for his contribution to the radio art and science, is with the Radio Sciences Communications Research Centre in Ottawa, Canada.

According to organizers, more than 100 people representing the radio broadcasting industry, local officials, historic communities, educators, students and Amateur Radio associations are expected to attend; a portion of the program will address the role of Amateur Radio enthusiasts in developing this great industry. While at the event, students between the ages of 10-12 will be able to build crystal sets during the afternoon session; they will be able to take these sets home with them.

Attendance is free and open to the public. More information is available on the IEEE's Boston Section Web site <http://fessendenmilestone.quartomese.com/> or by calling the IEEE Boston headquarters at 781-245-5405.

==> ARRL, TAPR PREPARE FOR DIGITAL COMMUNICATIONS CONFERENCE

Aficionados of digital communications are gearing up for the 27th annual ARRL/TAPR Digital Communications Conference (DCC) September 26-28 in Chicago, Illinois <http://www.tapr.org/dcc.html>. The ARRL/TAPR Digital Communications Conference is an international forum for radio amateurs to meet, publish their work and present new ideas and techniques. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications. The DCC is for all levels of technical experience -- not just for the expert. Not only is the conference technically stimulating, it is a weekend of fun for all who have more than a casual interest in any aspect of amateur digital electronics and communications; introductory sessions are scheduled throughout the conference to introduce new technical topics for both beginners and experts.

Topics at the DCC include, but are not limited to: Software defined radio (SDR); digital voice (D-STAR, P25, WinDRM, FDMDV, G4GUO); digital satellite communications; Global Position System (GPS); precision timing; Automatic Position Reporting System (APRS); short messaging (a mode of APRS); Digital Signal Processing (DSP); HF digital modes; Internet interoperability with Amateur Radio networks; spread spectrum; IEEE 802.11 and other Part 15 license-exempt systems adaptable for Amateur Radio; using TCP/IP networking over Amateur Radio; mesh and peer-to-peer wireless networking; emergency and Homeland Defense backup digital communications; using Linux in Amateur Radio; updates on AX.25, and other wireless networking protocols.

QEX Editor Larry Wolfgang, WR1B, will represent the ARRL at the Conference. He will also be giving a talk "Writing for Publication -- It's Not Rocket Science (Even if You Are Writing About Rocket Science!)." Retired ARRL Chief Technology Officer Paul Rinaldo, W4RI, will also represent the League. Rinaldo will speak on "SDR Outlook."

The DCC provides a separate (and lockable) room for participants to bring and show off their latest projects. Tables and power will be provided. Participants are encouraged to bring their own equipment and display for all to see, learn, and ask questions about, as well as a small sign and/or flyer naming and describing their project.

D-STAR digital voice and data will be the focus of the DCC Friday evening session. Pioneers and leaders in D-STAR digital voice and data technology will be presenting the technical innovations in D-STAR and how it is being used worldwide. In addition to the Friday evening session, ICOM will be at the DCC demonstrating D-STAR radios in the demonstration room, and TAPR's 70 cm and 23 cm D-STAR digital voice and data repeaters (KT7APR) with Internet gateway will be on the air.

WINMOR, an HF digital protocol designed for use with the Winlink 2000 network, is set to be unveiled at the DCC. According to developer Rick Muething, KN6KB, WINMOR will effectively eliminate the need for external PACTOR hardware. "This new protocol is implemented through a Windows application that uses a computer sound card for all the analog-to-digital conversion. It provides error-free ARQ transfers within 200, 500 or 2000 Hz bandwidths," Muething said. In terms of throughput, Muething said that the 200-Hz WINMOR mode appears to equal the performance of PACTOR I. In WINMOR's 2000 Hz mode, its performance rivals PACTOR III. "WINMOR is a work in progress," Muething said. "We won't be pulling the wraps off a finished application at the conference. We're close, though. I'd like to see on-air testing in 3 to 6 months."

Each year, the DCC hosts an in-depth 4 hour seminar on Sunday. Past seminars have included such topics as Software Defined Radios, Spread Spectrum Design and Theory, RD Design and Deployment, PICmicro MCU Design and Development, Packet Radio Networks with Millions or Billions of Stations and others. Seminars are given by experts in their field -- this year is no different. Phil Harman, VK6APH, will present "Software Radio Through the Looking-Glass."

Harman, licensed for more than 40 years, has worked on leading-edge RF techniques related to receivers and transmitters. His current passion is the development of fully digital HF radios. Harman co-writes the Software Defined Radio column in the "RSGB Radio Communications" journal and also co-authored the SDR chapter in the latest "RSGB Handbook." He will guide participants through the basics of SDRs right up to the very latest techniques that digitize signals directly at the antenna socket. Using diagrams and a minimum of math, Harman will cover such subjects as front end design, mixers, I and Q signals, digital up and down conversion, AGC techniques, noise blanking and high efficiency power amplifiers. The presentation will be highly interactive, so be sure to bring along that question that has been puzzling you for so long! Conference presentations, meetings, and seminars will be held at the Holiday Inn Hotel Elk Grove Village, Illinois. It is highly recommended that participants book rooms prior to arriving. A block of rooms at the special DCC room rate of $89.00 single/double is available; this rate is good until the block is all sold out. The hotel provides a complimentary shuttle to and from O'Hare Airport.

==>SOLAR UPDATE

Tad "Close bosom-friend of the maturing Sun" Cook, K7RA, this week reports: A new sunspot -- number 1001 -- emerged on Thursday, September 11. It is actually a single group with two small magnetic disturbances; we hope it is not another like the last sunspot, a weak one that barely emerged on August 21-22. That spot was so small that some observatories didn't count it, but it was a Solar Cycle 24 spot. August was much ballyhooed as the first time since 1913 that there was a month or more between the most recent sunspot appearances. Actually, it was the first time that a whole calendar month went by with no spots. Of course, this doesn't really mean anything more than any other 30 day period with no

spots because the calendar is based on arbitrary beginnings and endings. Sunspot numbers for September 4-10 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 65.9, 65.2, 65.8, 66.6, 67.1, 67.1 and 67.2 with a mean of 66.4. Estimated planetary A indices were 33, 7, 7, 8, 8, 6 and 4 with a mean of 10.4. Estimated mid-latitude A indices were 17, 7, 7, 7, 9, 4 and 2 with a mean of 7.6. The US Air Force predicts planetary A index for September 12-17 at 5, 8, 20, 12 and 8. Geophysical Institute Prague predicts quiet conditions September 12, unsettled September 13, unsettled to active September 14, unsettled September 15, quiet September 16, quiet to unsettled September 17 and quiet September 18. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by John Keats' "To Autumn" <http://www.bartleby.com/126/47.html>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, check out the ARRL September VHF QSO Party on September 13-15. The NCCC Sprint is September 12 and the PODXS 070 Club 80 Meter Autumn Sprint is September 12-13. The FISTS Get Your Feet Wet Weekend is September 12-14. The Swiss HTC QRP Sprint is September 13. The WAE DX Contest (SSB) and the Arkansas QSO Party are both September 13-14. The North American Sprint (SSB), the SKCC Weekend Sprintathon and the ARCI End of Summer Digital Sprint are September 14. The NAQCC Straight Key/Bug Sprint is September 18. Next weekend is the ARRL 10 GHz and Up Contest and the ARRL International EME Competition on September 20-21. YLRL Howdy Days are September 18-20. The NCCC Sprint is September 19 and the Feld Hell Sprint is September 20. Be on the lookout for these contests on September 20-21: The Colorado QSO Party, the SARL VHF/UHF Contest, the Scandinavian Activity Contest (CW), the CIS DX Contest, the South Carolina QSO Party, the Washington State Salmon Run and the QCWA Fall QSO Party. The Run for the Bacon QRP Contest and the 144 MHz Fall Sprint are both on September 22. The SKCC Sprint is September 24 and the BCC QSO Party is September 25. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, September 21, 2008 for these online course sessions beginning on Friday, October 3, 2008: Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Technician License Course (EC-010); Analog Electronics (EC-012), and Digital Electronics (EC-013).

Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ITU Leadership Visits Asian Amateur Radio Exhibit: For four days earlier this month, members of Asia's information and communications technology (ICT) sector convened at ITU Telecom Asia <http://www.itu.int/ASIA2008/>, focusing on core issues relating to ICT expansion across the region. The event featured the latest technologies and innovations -- including Amateur Radio -- as well as an extensive forum that explored key technologies, policies and applications. The IARU <http://www.iaru.org/>, in an effort to promote the benefits of the Amateur Radio Service throughout the region, participated in the event. The IARU booth was organized by IARU Region 3 <http://www.iaru-r3.org/> with assistance from the Radio Amateur Society of Thailand (RAST) <http://www.qsl.net/rast/>, the IARU Member-Society in that country. IARU Region 3 Director Gopal Madhavan, VU2GMN, said that while at ITU Telecom Asia, ITU Secretary General Dr Hamadoun Toure, HB9EHT, and Dr Eun-Ju Kim, Head of the ITU Regional Office for Asia and the Pacific, visited the IARU booth, staying and talking with hams and visitors for more than half an hour.

* VHF Society to Hold Conference Next Month: The Pacific Northwest VHF Society (PNWVHFS) <http://www.pnwvhfs.org/> will host their 15th annual conference <http://www.pnwvhfs.org/administration/conference.htm> in Moses Lake, Washington, on October 3-5. ARRL Contest Branch Manager Sean Kutzko, KX9X, will travel to the conference to represent the League. An avid 6 and 2 meter operator, he will give a general update on Contest Branch issues that affect VHF+ operators, speak about the ARRL's new Fred Fish Memorial Award <http://www.arrl.org/awards/ffma/> and check QSLs for VUCC <http://www.arrl.org/awards/vucc/> and other ARRL awards. Joe Taylor, K1JT -- Nobel Laureate and developer of WSJT <http://www.physics.princeton.edu/pulsar/K1JT/>, software for VHF meteor scatter communications -- will be the keynote speaker. Along with social events throughout the conference, a formal program of speakers, presentations, technical programs and round-table discussions will take place Saturday morning and afternoon. Following a brief society annual meeting that afternoon, there will be an informal swap meet in the parking lot. Society members and non-members are encouraged to attend the conference. For more information, please visit the PNWVHFS

conference Web site. -- PNWVHFS Secretary Steve Pack, WB7VAS

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Can someone advise on problems with an Icom ic-718?
Suddenly, I can no long xmit on full power. I can get it put out maybe
40W according to the built-in meter and according to my tuner. Also,
when tuning the tuner in xmit mode, there is a hum that gets loud or
soft depending on the tunning - coming from the xmitter. Is it
possible that one of the two 2SC2904's in the PA unit has blown?
Help / advice is appreciated.

903. Tristao towers

Funny how time slips by when you're not paying attention.

I've always wanted a tower. I was impressed by the one at the club station that I used to hang out and bother the operators before I was licensed.

At long last, 41 years after I got my novice license, I have a tower.

Admittedly, it's still laying on it's side in the driveway having laid in a friend's back yard for 11 years. ;-) But... I _have_ my tower now.

A simple affair, not self supporting, it needs to bolted to the side of the house and the top needs guying when all the way up. And sure, it's only 38' tall. But I _have_ my tower now.

Doesn't sound like a bad PA transistor from here.

Two guesses:

- Something has happened to your antenna system. The ground has opened,
or the shield of the coax has opened, or a connection on the antenna
itself has opened. Causing high RF levels in the shack, which are feedin
g
back into the radio.

- Something is wrong with your power supply. It's no longer able to
deliver rated voltage at the current necessary to power the IC718 at full
output. A failed pass transistor (or driver transistor) can cause this.
Actually, so can a loose connection in the cable connecting the supply to
the radio.

Divide and conquer. Get your hands on a dummy load & a voltmeter.

Can you transmit at full power into the dummy load? If so, there's
something wrong with your antenna. (or external tuner, or coax, or groun
d)

If you *can't* transmit at full power into the dummy load, leave it
connected and measure the power supply voltage as you transmit. It shoul
d
stay above 12.5 volts. If it doesn't, there's something wrong with the
supply.

If you can't transmit full power into the dummy load but the supply
voltage is staying above 12.5 then you probably do have a problem with th
e
IC718 itself.

Good luck.

Hi Jeff.

Congratulations I know the feeling! Hope you get the tower into use without
too much of a delay.

73, Ian G4EAN.

> Hi from KJ4DIY
>

Hi, Howard and Welcome to Ham Radio!

I got my novice in 1957 when I was 11 thanks to the local hams in our little town in upstate NY. It was a defensive move on their parts because us boys used to hang out in their hamshacks all the time working DX on their radios and they figured the ONLY way to get rid of us and get control of their equipment back was to get us our licenses and help us build novice stations of our own so they could have some PEACE! It worked pretty well...

It's been a helluva ride.

Please do not judge any of us from what you see in some of these newsgroups or may hear on some 75 meter frequencies. We're NOT a bunch of nasty old men who hate everyone that hasn't been on the air since dirt was new...(c;

My record youngest ham failed his first test when he was 7 because he ran out of paper printing those big letters on the Novice Morse test. We gave him plenty of paper the next time around and he got his Novice at 7, Tech at 8 and General at 9, at which point he moved away. That was a long time before we could search on the internet to find him, again.

I think you waited way too long to make the jump.

73 de Larry W4CharlestonSouthCarolina
waiting for Hurricane Ike to come blow the place away, again....

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items for giveaway will be permitted |
on an occasional basis from casual, non-commercial owners, and at the |
discretion of the moderators. The items should be free except for |
reasonable direct costs such as shipping, must be directly |
amateur-radio-related, must be in serviceable condition, and be |
practical to ship to a distant recipient. This is intended as a |
common-sense exception to our ban on forsale postings, provided that it |
doesn't overwhelm the basic character of our discussion newsgroup with |
classified ads or requests to haul off scrap or junk in salvage |
condition. |

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with
the "netiquette" of Usenet as well as the particular posting guidelines
for this group. Several useful posts for "newbies" can be found on the
newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be
automatically rejected:

A) Articles that contain original text of more than 75 characters
per line
B) Crossposted articles to newsgroups not included in these
Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital
signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned
from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common
text. This may be a cute quip or quote, or may include information
about their family, contact information, or disclaimers required by
their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or

members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should

not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

(Adapted, with permission, from the misc.kids.moderated Posting Guidelines.)

Jeff-1.0,
You may want to check carefully for corrosion and if you find any
get the surface scraped down and get it hot dipped galvanized.

You may also want to check with your local building department to see
if the local codes make any special provisions/requirements when used
towers are installed.

You are getting a building permit (not to be confused with a use or
zoning permit), right?

Most towns are responsible for how they put up light and utility poles. Get
in touch with their public works people. When you follow their own specs
there's not much more they can say since you have found their own point of
liability.

Amateur Radio Newsline(tm) Report 1623 - September 19, 2008

Amateur Radio Newsline report number 1623 with a release date of Friday, September 19th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hurricane Ike hits Texas and ham radio is ready. Also, Australian ham T-V to go digital, an electronics show is raided in Germany and D-Star comes to a remote corner of the world. Find out where on Amateur Radio Newsline(tm) report number 1623 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO FACES HURRICANE IKE

Amateur radio was ready when hurricane Ike made landfall on the East Texas coast on Saturday, September 13th. Bill Pasternak, WA6ITF is in the newsroom with a look at the storm and the work of the nations ham radio community during and after the storm:

--

Ike came ashore on Galveston Island packing driving rain and wind gusts in excess of 110 miles per hour. It flooded thousands of homes and businesses, shattered windows in Houston's skyscrapers while knocking out power and telephone service to millions of people. Cellular telephones reportedly became all but useless. But ham radio continued to operate throughout the storm and was the first to report the results of Ike's landfall:

--

Audio is available in the MP3 version of this weeks newscast dowbloadable at www.arnewsline.org

--

That was Jim Sellers, N0UAM, in Springfield, Missouri, who was in control of the Voice over Internet Severe Weather Net. This was one of a pair of severe weather nets that played a key rile in tracking Ike. The other was the Hurricane Watch Net with hits home on 20 Meter SSB and an alternate frequency on 40 Meter SSB. With long distance propagation on the high frequency bands not very good, the VoIP Net played a significant role in gathering information for the National Weather Service as the storm made its way up toward the North:

--

Audio is available in the MP3 version of this weeks newscast downloadable at www.arnewsline.org

--

Meantime, back along the Texas and Louisiana coastlines, Ike began to spawn a series of tornadoes as reported on the VoIP Net by then net control Richard Long, KF6BKA, operating from Nashville, Tennessee:

--

Audio is available in the MP3 version of this weeks newscast downloadable at www.arnewsline.org

--

Even with poor propagation, some stations in Texas were able to pass along information on the High Frequency bands, This transmission was recorded using the N2JEU Internet controlled remote receiver in upstate New York:

--

Audio is available in the MP3 version of this weeks newscast downloadable at www.arnewsline.org

--

Unfortunately the signal dropped back into the noise before we could get his callsign, but he was among many hams involved in keeping the information on Ike flowing.

As word of the immensity of Hurricane Ike became known, the staff at ARRL headquarters in Connecticut began to plan for its aftermath. Anticipating that communications staffing requests would expected to exceed resources in the Hurricane Ike recovery areas the ARRL began planning the coordination requests for additional ham radio personnel. These would be volunteers from adjoining and near-by states out of Ike's path but close to Texas and Louisiana. Meantime, hams involved in the emergency continued to handle information requests from across the region:

--

Audio is available in the MP3 version of this weeks newscast downloadable at www.arnewsline.org

--

By late Sunday, September 14th, Ike had been downgraded to a Tropical Storm was moving out of Texas. Both the Hurricane Watch Net and the VoIP Nets were secured and it was time for relief efforts and damage assessment to begin.

And in another report coming in on Tuesday, September 16th, members of ARES South Texas District 14, were are manning at least six Points of Distribution in Harris County Texas. These operators were and possibly

still are providing communications between the National Guard units at the distribution centers and the Harris County Office of Emergency Management, to coordinate the delivery and re-supply of food, water and ready to eat meals to Ike's victims. Ironically, most of the participating amateurs are also victims, having suffered property losses and expected power outages to last approximately three weeks.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the newsroom in Los Angeles.

--

The story of Hurricane Ike and its aftermath will be with us for some time to come. We will have more on the role of ham radio in post storm relief efforts in next weeks newscast. In the meantime, if you happen to hear any on the air ham radio relief communications please tape it and send it to us for inclusion in future Hurricane Ike reports. (ARNewsline(tm) the ARRL and various other sources. Audio via the VoIP Weather Net and the N2JEU remote receiver)

**

RADIO SCAM ALERT: WEBSITES PFISHING THE FCC

It appears as if someone or a group of someone's is trying to scam the Federal Communications Commission out of some money. According to news reports attorney Harry Cole told Radio World that his firm advised the commission last week that it found two fake Internet sites that are attempting to misdirect those licensees trying to pay their regulatory fees online.

The fees in question are due on September 25th. In a press release the FCC said that the phony websites are reportedly trying to collect financial information. The agency is urging regulatory fee payers to make any Internet payments directly through the commission's authorized Internet site. It also says that its Inspector General is looking into the matter. (RW)

**

RADIO LAW: W3NYI WINS TOWER BATTLE

Some good news for a Pennsylvania ham what had been fighting to keep his tower and antenna. Word that Chuck Mills, W3NYI, will be able to keep his tower after all. Amateur Radio Newsline's Mark Abramowicz, NT3V, has more:

--

A few weeks ago here on Newsline, we told you the story of Chuck Mills, who lives in a small town east of Pittsburgh.

Mills was granted a permit and then had it lifted by Penn Township officials after neighbors complained about his plan to erect a 53-foot, tilt-over, crank-up tower in his development.

American Radio Relay League volunteer legal counsel Michael Lazaroff, K3AIR, stepped in and tried to allay concerns of the township officials.

But, when Lazaroff tried to meet all concerns raised by the township in a second filing for a permit, he got a call from the township's attorney that the second application would likely be denied.

But that didn't stop Lazaroff.

He told the township attorney that the small community could be facing a very expensive legal fight which he predicted it would lose if it denied the second permit.

Lazaroff also noted a story in the local press reported the township treasurer complained that the municipality already had exhausted its legal budget for the year handling Mills' appeal hearing.

In an email to Amateur Radio Newsline, Lazaroff says he heard nothing more about Mills' second application.

But, Lazaroff's research into state law found language stating any building permit application not acted upon within 15 business days is automatically granted.

Lazaroff tells Amateur Radio Newsline he sent the township a letter citing the statute and advising officials that any interference in the timeline would result in an immediate lawsuit.

Two days after the 15-day period expired, Lazaroff says Mills received his permit.

Meanwhile, legislative remedies to prevent future problems like the one Mills faced are making their way through Pennsylvania's state House and Senate.

As of this week's deadline, the Pennsylvania Senate was preparing to pass a bill barring municipalities from interfering with amateur radio tower installations.

The bill contained an amendment mentioning a possible height restriction for certain townships, but left it open to legal interpretation whether any restriction would have to be followed.

The Pennsylvania House has a similar bill - without the amendment - awaiting action.

Those lobbying for passage of the bills say there appears to be a broad base of bi-partisan support for addressing the issue.

We'll keep you updated on the progress in future reports.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia

--

Needless to say that Mills is happy that the fight is over. (W3WN, ARNewsline(tm))

**

BREAK 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WL7CVG repeater serving South-central Alaska.

(5 sec pause here)

**

RADIO CHANGES: AUSTRALIAN ATV REPEATER TO GO ALL DIGITAL

A fast scan Amateur Television repeater in Australia will be among the worlds first to go fully digital. W-I-A newsman Rob Carmichael, VK3DTR, speaks with the ham who is making it happen:

--

(ROB VK3DTR) Good morning, I have with me Peter Cossins VK3BFG who has some very interesting news about the Melbourne ATV repeater.

(PETER VK3BFG) Yes Rob- the plan is to digitise the output of VK3RTV on Mt Dandenong which services Melbourne and Geelong. The project will use German made commercial modules and a linear amplifier
to convert this repeater to digital transmission.

(ROB) Sounds interesting, how will we be able to pick up the digital TV signals?

(PETER) That will be very easy by using the now readily available set-top boxes that convert the off air digital signal so they can be seen on an ordinary analogue TV receiver.

(ROB) Sounds very interesting indeed and I bet it will encourage more people to get involved. When will it happen?

(PETER) That's right Rob, it should stimulate more activity on ATV. The plan is start the project in December and its completion will depend on securing the necessary funding.

(ROB) Thank you Peter. Now back to our studio.

--

Newsline will be following this interesting ham radio digital television conversion as it progresses. (WIA News)

**

EMERGING TECHNOLOGY: DTV ENTERING THE HOME STRETCH

And speaking about digital television, the FCC has issued a new report on the status of the digital build out by full power television broadcasters It shows that over 96 percent of active full power television stations are either fully operational with digital service or

are on track to have their full digital service operational by February 17, 2009.

Here are the numbers. Some 1,002 stations which is 56 percent of a current total of 1,798 active television stations reported that they have fully constructed their post-transition DTV facilities and are ready for the DTV transition. The only step remaining for these stations is to terminate analog operations on or before next February's analog cutoff date. (FCC, CGC)

**

ENFORCEMNENT: $18,000 FINE AGAINST TEEN IS CANCELLED BY THE FCC

The FCC has dismissed an $18,000 fine levied against a Largo, Florida teen they identify only as John Doe due to his age. This after the youth who now in state custody told the agency that he had no income to pay. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the rest of the story:

--

As previously reported , back on August 24, 2007, the United States Coast Guard contacted an agent from the Tampa Office, who was en route to locate the source of the false distress calls received by that maritime service. The Coast Guard told the FCC agent that it had used direction finding to determine that the false distress calls were coming from a location in or near a mobile home community in Largo, Florida. The Coast Guard also told the agent that the Largo Police Department had just apprehended a student who lived in this mobile home community and who had several radios. This included a marine band transceiver in his bedroom that was connected to a 12 volt marine battery and whip antenna.

Later that day the teen confessed to the Largo Police Department that he had stolen a marine radio from a boat and used it to make five false distress calls to the Coast Guard from his bedroom.

The Largo Police Department arrested our John Doe on charges unrelated to the false distress calls. It also confiscated one marine radio, two CB radios, a marine battery and a whip antenna from his residence. On August 30, 2007 the FCC confirmed that the marine radio confiscated from the teen could in fact operate on maritime channel 16.

On April 30, 2008, the Tampa FCC Office issued a Notice of Apparent Liability for Forfeiture to John Doe in the amount of $18,000. This, for the apparent willful and repeated violation of Sections 301 and 325 of the Act.

John Doe did not submit a response to the notice, and this past June 30th the Enforcement Bureau released the Forfeiture Order. Soon after, our John Doe submit a petition for reconsideration of the Forfeiture Order. In his pleading he expresses sincere remorse for his actions. He also requested a reduction or cancellation of the forfeiture, because it would pose a financial hardship.

In his filing he explained that he was only a sixteen-year-old, that he has never had a job and has no sources of income. He also noted that he has been in the custody of the state of Florida and in a juvenile detention facility since this past February .

After examining the financial documentation submitted by this John Doe, the FCC concluded that cancellation of the forfeiture is warranted. This, based solely on his lack of income and the fact that he is currently in the custody of the state.

For the Amateur Radio Newsline. I'm Bruce Tennant, K6PZW, reporting.

--

Because of the seriousness of the violation, the FCC did admonish this young John Doe for his willful and repeated violation of Sections 301 and 325 of the Communications Act. (FCC)

**

ENFORCEMENT: INVESTIGATORS RAID BERLIN ELECTRONICS EXPOSITION

And some enforcement action of a different sort. This as authorities in Germany confiscate electronics that they believe to be patent violations. Amateur Radio Newsline's Jeff Clark, K8JAC, is here with the details:

--

German criminal investigators have confiscated a substantial amount of electronic equipment from the IFA Conference in Berlin. According to Media Network, the items seized include at least 170 TV sets, 140 MP3 players, 60 DVD recorders and 43 car radios.

Media Network days that the manufacturers of the goods are suspected of infringing patents. The majority of the items were manufactured in the Pacific Rim. Among them were such big names such as Hyundai IT, whose display of flat screens was removed by the investigators in full view of the public.

Although criminal investigators have visited IFA shows before, this is the first time that they have operated on such a massive scale. About 200 enforcement personnel are believed to have been involved in the enforcement action.

I'm Jeff Clark, K8JAC.

--

The Berlin IFA Conference ran through Wednesday, September 3rd. (MediaNetwork)

**

RADIO LAW: STATION NOT TO BLAME FOR CAR ALARM FAILURES

Car alarms going off can be annoying, but for a broadcaster it's even worse
when your radio station gets blamed for it.

Take the case of WRBQ-FM in Tampa Florida. According to the Tampa Tribune, the FCC says that the station which operates on 104.7 MHz uses a frequency that may contain a harmonic. One that could possibly be the same as the frequency used by some car alarms.

The Tampa Tribune reported last week that a radio stations signal may be causing some alarms going to either go off or stop working. But says the FCC, the station is not in violation of any law since it says that the car alarms in question are required to be designed to accept and reject any interfering signals.

And not everyone is convinced that WRBQ is the cause. The newspaper said that some think the problem could be traced to a local police radio system or even wireless phones. Well let you know if we hear more.
(RW)

**

D-STAR NEWS: D-STAR COMES TO THE AZORES

D-Star has come to one of the remotest points on the globe. This, with word that the first D-Star repeater in the Azores Islands is on the air.

The CQ0DAH dash B D-Star repeater is located on Santa Bï¿½rbara Mountain on Terceira Island. It operates on UHF Channel RU576, with a transmit frequency of 438.450MHz and receive frequency of 430.850MHz, transmitting 25 watts out.

The adoption of D-Star in a remote outpost like the Azores is very significant since ham gear is not easy to come by in that part of the world. What it also seems to mean is that the D-Star digital system is quickly becoming the world standard that will eventually replace analog F-M for ham radio ham radio utility repeater communications. This, even though its only supported by Icom with most other manufacturers having turned their backs to it or trying to push alternatives that the ham radio community is showing little interest in adopting. (D-Star Remailer)

**

THE SOCIAL SCENE PNW VHF CONFERENCE IN OCTOBER

The Pacific Northwest VHF Society will host their 15th annual conference . This, in Moses Lake, Washington, from October 3rd to the 5th.

Joe Taylor, K1JT, the astrophysicist who won the Nobel Prize in Physics for his discovery with Russell Alan Hulse of a "new type of pulsar is the keynote speaker. Taylor is best known in ham radio as the developer of WSJT software for VHF meteor scatter communications.

Other scheduled events include technical programs, presentations, and round-table discussions as a part of the formal program of speakers. There

will be an informal swap meet in the parking lot. More information about the conference is on-line at www.pnwvhfs.org (VHF Reflector)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

A WORD FROM SUPPORT FUND ADMINISTRATOR ANDY JAREMA, N6TCQ

This is Andy Jarema, N6TCQ, Newsline Support Fund Administrator. This would normally be the spot in the newscast when I'd be able to make some thank-yous to those who help us keep the news coming your way, but our producer has informed me that there's just too much breaking news happening this week for me to do that.

Rest assured I'll be back in future weeks, but in the mean time I'd just like to say that these reports require us to go get the news, it doesn't come to us. There will be an address at the end of this newscast where you can help us to help keep you informed, or you can do it through PayPal on our official website, arnewsline.org. Thank you, and as they say: now back to the news. (Support Fund)

**

NAMES IN THE NEWS: AMSAT BOD MEMBERS SEEKING NEW PRES

Some names in the news. First off is word that AMSAT North America has elected three people to its Board of Directors, but is in search of a new president. As a result of the 2008 Board of Directors election, Tom Clark, K3IO, Lou McFadin, W5DID and Gould Smith, WA4SXM will serve on the AMSAT BOD for 2 years. The alternate is Bill Ress, N6GHZ. (ANS)

**

NAMES IN THE NEWS: W1GPS WONT RUN FOR ANOTHER TERM AS AMSAT-NA PRES

Meantime, current AMSAT President Rick Hambly, W2GPS, has notified the organizations Board of Directors that he is not a candidate for President for the upcoming year. Hambly has served as President of AMSAT since October 2004.

To fill Hambly's position the members of the new Board will then begin a formal search process to recruit and select a new President. This process is expected to take several weeks with the goal of having a new President identified prior to the AMSAT Board of Directors meeting on October 23, prior to the AMSAT Symposium in Atlanta. (ANS)

**

NAMES IN THE NEWS: NEW IRTS NEWS EDITOIR - EI8JB

The Irish Radio Transmitters Society has appointed Charles Carolan EI8JB as the new News Editor. Carolan resides in Navan having moved there from Dublin. Although his EI8 call is relatively recent, he was first licensed while living in Canada as VA3IRL back in 1995. Carolan to take over from Mark Wall EI7IS. (GB2RS, Southgate)

**

EMERGING HAM TECHNOLOGY: CW SKIMMER SPARKS DISCUSSION

Its new, exciting and can make C-W operation a breeze. We are talking about a new Morse reception assistance program that is so advanced that it has the world of Amateur Radio talking. Jim Linton, VK3PC, reports:

--

CW skimmer makes paddles go further?

Like virtually all sports, amateur radio does have its controversies and a current one is called the CW Skimmer, but what is it?

A clever piece of software developed by Alex Shovkoplyas VE3NEA, the Canadian who is also behind the DX Atlas and a number of other ham radio programs.

CW Skimmer receives and decodes signals and graphically shows them as a band map on a computer screen, listing stations by callsign and frequency.

The software obviously can help to more easily find stations, which could be very useful during a contest of a DXpedition.

Meanwhile Pete Smith N4ZR is pushing for listening centers to be set up using the software to create a 'reverse beacon' network.

CW Skimmer is sparking lots of debate as to whether it's just a new innovation that should be embraced by radio amateurs, or outlawed by ham radio contest rule makers.

For the Amateur Radio Newsline, I'm Jim Linton VK3PC.

--

The bottom line is that C-W Skimmer is here, people are using it. And like it or not you cannot regulate mans ingenuity nor can you turn back the sands of time. (WIA News)

**

HAM RADIO IN SPACE: SOUTH AFRICAN HAM-SAT MAY LAUNCH BY YEARS END

Another ham radio satellite may be on-orbit soon. According the Russian Federation TASS news agency the South African Amateur Radio satellite Sumbandila could be launched this year.

The TASS report quotes the head of the Federal Space Agency Anatoly Perminov as saying that Sumbandila is likely to be launched into orbit as the associated pressures along with a Russian spacecraft known as Meteor-M. Meteor-M is currently scheduled for launch by the end of 2008. (Southgate)

**

HAM RADIO IN SPACE: THE SUDAN AGAIN ON THE BIRDS

The Sudan is once again active on the Amateur Radio Satellites. This, with word that ST2NH is operational from Khartoum. To request a scheduled contact please contact Nadir via the email address given in his entry at QRZ.com. (ANS)

**

ON THE AIR: CELEBRATING STEAM IN THE BRITISH ISLES

On the air. Word that special event station GB2STI will be operating 'Railways On The Air' event the weekend beginning on Saturday, September 27th. This, from the excursion platform of the Railway Preservation Society of Ireland at Whitehead. The station will be operated on 80, 40 and 20 meters by members and friends of the Antrim and District Amateur Radio Society as part of the celebrations of the first steam passenger train to operate in the British isles. A special QSL Card will be available for all contacts made during the event. QSL via GI0KPF at his callbook address. (GB2RS)

**

ON THE AIR: NEW SOLAR BEACON DOWN UNDER

And something interesting from down-under. A new solar powered QRP beacon is operating on a frequency of 3 point 686 MHz with an output power of only 90 milliwatts. The transmitter feeds a half-wave dipole and is in a horse stable at Beverly, an historic settlement in Western Australia's wheat belt
country. That's about 130 kilometers east of the city of Perth.

So far it's been heard in VK2, VK4 and VK6. Its owner is Barrie Burns, VK6ADI. He welcomes any and all reception reports via e-mail to vk6dir (at) bigpond (dot) com. (WIA News)

**

DX

In DX, HA3JB in Morroco will activate the new callsign CN2IPA of the "International Police Association" from September 21st through October 5th. Gab will use CW, RTTY, PSK, SSTV and some SSB and plans to take part in the CQDX RTTY Contest. QSLs should be sent via his homecall and count for the International Police Association award.

And F6AJA, wants to remind everyone to visit the Les Nouvelles DX web page to see more than 5,700 old QSL cards in several different albums and

galleries. The URL is LesNouvellesDX.free.fr.

F5IRO will be on Martinique from September 21st until February 2009. He will likely be using his home call portable F M using CW, digital modes and also SSB on 40, 30 and 20 meters during his little spare time on weekends after 2200 UTC. QSLs direct or via bureau.

Lastly, listen out for LA7WCA, to hit the airwaves from Svalbard as JW7WCA from September 19th to the 26th. He will be accompanied by LA8BCA and LB9UE. The three will work mostly in SSB and only some CW on 160 through 10 meters. QSL's for JW7WCA go via LA7WCA.

(Above from various DX news services)

**

THAT FINAL ITEM: A COMPUTER WITH HUMAN COMMUNICATIONS SKILLS

A computer system that can carry on a discussion with a human being by reacting to signals such as tone of voice and facial expression is being developed by an international team of researchers. Amateur Radio Newsline's Burt Hicks, WB6MQV, tells us about this latest experiment in artificial intelligence:

--

The project is known as SEMAINE and it plans to build SAL. That's short for the Sensitive Artificial Listener system.

SAL will have the ability to perceive a human user's facial expression, gaze, and voice and then interact with the user. When engaging with a human, SAL will be able to adapt its own performance and pursue different actions, depending on the users non-verbal behavior..

Professor Roddy Cowie, from the School of Psychology, leads the team at Queen's University in Belfast, Ireland. He says that a basic feature of human communication is that it is colored by emotion. He says that when we talk to another person, the words are carried on an undercurrent of signs that show them what attracts us, what bores us and so on.

Professor Cowie says that the fact that computers do not currently do this is one of the main reasons why communicating with them is so unlike interacting with a human. It is also one of the reasons we can find them so frustrating to use. .

But SEMAINE and projects like it will change the way people interact with technology. They hope that this means that you will be talking to your computer in 20 years time. When you eventually are able to do this, Professor Cowie asks that you pause for a minute, and remember that the human sciences at Queen's University helped to lay the groundwork.

For the Amateur Radio Newsline, I'm Burt Hicks, WB6MQV, in Los Angeles.

--

The SEMAINE project is led by the German Center for Research on Artificial Intelligence. The other partners are Imperial College in London, the University of Paris , the University of Twente in Holland, the Technical University of Munich and of coarse Queens University in Ireland. The European Commission awarded SEMAINE a grant of 2.75 million Euros after it was ranked first out of 143 bids for medium-sized projects in the area of cognitive systems and robotics (Adapted from materials provided by Queen's University Belfast on-line release)

==> HAMS IN TEXAS AND SURROUNDING STATES ACTIVE AS IKE POUNDS GULF COAST AND INLAND AREAS

As Hurricane Ike weakened and became a tropical storm and then a tropical depression after slamming ashore near Galveston, Texas early Saturday morning, hams in several ARRL sections were supporting agencies with their communications needs. Although the final word on all the locations where ARES was providing communications support has yet to be reported, it was clear that Amateur Radio played a part in the response to the massive storm.

In a conference call with ARRL Headquarters staff the morning of Sunday, September 14, ARRL section leadership reported that ARES was supporting Emergency Operations Centers throughout the region, and that equipment

shipped to the Gulf Coast under the Ham Aid program was either being put to use or held for possible use as requests arrive.

* Texas

South Texas Section Emergency Coordinator Mike Schwartz, KG5TL, whose section took the brunt of Ike's wind and rain, reported that he had spoken earlier to 9th District Emergency Coordinator Brian Cater, KC5YSM. Cater said his district, located to the east of Houston and Galveston, had lost power, but some food was available at hotels and other venues that were using backup generators. Electric utility poles were holding up well, since many had been replaced with newer ones after 2005's Hurricane Rita.

Schwartz reported that ARRL North Texas Section Emergency Coordinator Bill Swan, K5MWC, sent two communications vehicles and a couple of ham radio operators from his section to the Orange area in South Texas.

Hams in the Houston and the surrounding area responded to calls earlier this week to assist served agencies with Points of Distribution (POD) around the Greater Houston area. These PODs are set up to distribute water, ice and food to area residents dealing with Ike and that storm's aftermath. According to Joe Gadus, KD5KTX, an ARRL Public Information Officer in the South Texas Section, members of ARES South Texas District 14 -- under the leadership of District Emergency Coordinator Jeff Walter, KE5FGA -- were manning at least six PODs. "These hams provided communications between the National Guard units at the PODs and the Harris County Office of Emergency Management to coordinate the delivery and resupply of food, water and MREs (meals ready to eat) to the victims of Hurricane Ike," he said. "Most of the participating amateurs are also victims [of the storm], having suffered property losses and power outages expected to last approximately three weeks."

Late Sunday, the Texas State Operations Center released a Situation Report that included the following:

"Radio Amateur Civil Emergency Services (RACES): State emergency communications operations began at 1800 Thursday, September 11, with the activation of the State RACES network. Operations consisted of monitoring joint emergency frequencies. These were operated by RACES and ARES (Amateur Radio Emergency Service) and other civil/Amateur Radio Clubs.

"Military Affiliated Radio Service (MARS): Texas MARS operators activated AAN6ETX (Texas SOC MARS station) at 0800 local on September 13, 2008. AAN6ETX was put into 24/7 operation beginning at 1900 local on September 13. The MARS and RACES have been actively teaming together to solve problems and get information to the appropriate parties. Increased activity began on Saturday after the storm made landfall and damage assessments were in progress. Five reports were received from Houston Transtar, which had no other means of submission, other than Winlink. Messages and critical information regarding safe routes were relayed to

a relief group heading into the Orange County area. At one point contact between the SOC and the City of Port Arthur was lost and the MARS station was able to connect them with a Navy MARS/ARES/RACES person in the area. The MARS is also supporting and monitoring Task Force IKE's recon team via AAR6NAC. As of Sunday, September 14, 2008, the combined RACES/ARES/MARS nets received and relayed multiple emergency communications reports to the SOC, and local jurisdictions."

* West Texas

Meanwhile, remnants of Tropical Storm Lowell are still affecting residents of the West Texas Section. Section Emergency Coordinator J.T. Caldwell, WA5ZFH, reported that the levees in the town of Presidio -- a town on the banks of the Rio Grande of about 5000 people -- are holding, "but water is close to the top." Even before Ike hit, that town was more than 11 feet above flood stage resulting from rains left by Lowell. Mexican authorities have been dumping water from their reservoirs that feed into the Rio Grande, causing that river to flood, affecting Texas towns in the region.

"Additional water is being released from Luis Leon dam in Mexico," Caldwell said; a portion of the levee broke on the Ojinaga, Mexico side Tuesday night at approximately 11 PM CST. Presidio's lowest areas have been evacuated. Emergency workers also shut down the Presidio-Ojinaga International Bridge connecting the city to Ojinaga, Chihuahua, Mexico, which was in danger of flooding as the Rio Grande continued to rise Tuesday. "Do not travel down here if your intent is to get to Ojinaga," Presidio City Administrator Cynthia Clarke warned travelers, adding that there had been three breaks in a levee. "There's no way to get across."

"The forecast calls for the river level to rise sequentially each day," Caldwell said. "No one currently expects the levees to hold... [and] residents have been advised that if they hear sirens, immediately leave and seek higher ground -- hundreds of residents have [already] been evacuated. The shelters here have since been combined into one shelter at the Presidio Elementary School with about 120 people in it," with more expected as the levees breech or overtop.

* Louisiana

>From Louisiana, where residents are recovering from the effects of Hurricane Gustav, Section Manager Gary Stratton, K5GLS, reported to those on the conference call that Amateur Radio volunteers have had constant telephone communications through the Ike emergency, and there have been no problems at all with VoIP systems <http://www.arrl.org/qst/2003/02/VoIP.pdf>. There is supplemental sheltering for Hurricane Gustav and additional shelters for Ike. Most shelters are supported by local clubs and ARES groups around the state, working with EOCs. Section Emergency Coordinator Jim Coleman, AI5B, is participating in Louisiana VOAD conference calls <http://www.nvoad.org/>.

* Arkansas

>From Arkansas, Section Manager David Norris, K5UZ, reported via e-mail that SKYWARN nets in the state were busy Saturday and Sunday. "Several tornados were spotted and tracked with some causing damage in Cabot and possibly Apin. There has been quite a bit of straight-line wind damage in the state, and as of 10 PM September 14, approximately 20,000 customers were without power. Many trees are down in my area and both of my 75/80 meter arrays have fallen victim to the storm. No tower collapses here, just a lot of mangled wire."

* Illinois

After the remnants of Ike and Lowell brought 9 inches of rain to the Chicago area, Illinois Section Manager Tom Ciciora, KA9QPN, reported Monday morning that "Grundy County ARES activated in support of county EMA efforts in flood control. One shelter is activated at this time. Additionally, both Kane and Kendall Counties have been especially hard hit with numerous road closures and evacuations. It was a real character-builder for Kane County, as their EOC also flooded yesterday."

* ARRL Headquarters Maintaining Coordination Efforts

Following Sunday's conference call, the group of ARRL section leaders and Headquarters staff who had been participating in conference calls that spanned three major storms on three consecutive weekends agreed to suspend them. They can be reestablished on short notice, however. In addition, W1AW suspended its monitoring and coordinating operations as of 6 PM Eastern Time Sunday.

Coordination of Amateur Radio's response to the recent hurricanes continues, and ARRL Headquarters continues to participate in national conference calls coordinating the response efforts on an as-needed basis, as do volunteers in Texas and Louisiana.

Only on September 15, were many of the VOAD and other supporting agency crews beginning to be able to move in to areas that have seen the most destruction. ARRL Headquarters will be receiving further reports of the exact contributions hams are making in the recovery effort, and we will share them as information arrives.

==> AREAS NOT DIRECTLY IN STORM'S PATH ALSO AFFECTED BY IKE AND LOWELL

While Hurricane Ike, as well as Tropical Storm Lowell, caused severe damage in and around the impact zone of the Texas Gulf Coast, the storm's aftermath was felt as far north as Ohio, Indiana, Illinois, and Kentucky. Just like their counterparts on the Gulf Coast, ARES members in the Midwest are assisting served agencies in their area.

While Ohio was not in the direct path of Hurricane Ike, that state is definitely feeling the aftermath of the storm as more than 2 million homes -- 18 percent of the population -- in the southwest portion of that state and neighboring Kentucky have been without power since Sunday, according to a story on ohio.com, an online service of the Akron

Beacon Journal.

On Wednesday, ARRL District Emergency Coordinator for Ohio District 4 Robert Spratt, N8TVU, reported that the Butler County Emergency Management Agency had requested ARES assistance to "move a shelter trailer that can support up to 450 clients from the Hanover Township Fire Department to the City of Hamilton," a distance of about 5.5 miles. Spratt said that the shelter was being established to house those residents whose homes had been structurally damaged or deemed unsafe.

Hurricane-force winds of up to 78 MPH blew through Ohio on Sunday, causing damage in 84 of the state's 88 counties, said Ohio Governor Ted Strickland. The governor declared a State of Emergency, allowing the Ohio Department of Transportation to help local communities remove debris from roads.

Calling the power outage "the worst and widespread I have seen," a spokesman for the Dayton Power & Light Company said that 50 transmission poles that support larger voltage lines were down and some utility poles "were snapped in two." A spokesman for Duke Energy (which serves Ohio and Kentucky) said that even with the influx of electrical crews from outside the area, "We're still looking at some customers being without [electrical] service until Saturday or Sunday."

In Illinois, Governor Rod R. Blagojevich declared seven counties -- Cook, DuPage, DeKalb, Grundy, Kane, LaSalle and Will -- disaster areas. With the state proclamation, state assets and personnel will be provided to affected communities to help them respond and recover from the floods.

On Monday, September 15, the Grundy County ARES team was activated at 11:30 AM, said DEC Bob Cockream, AA9EE. "The KB9SZK VHF repeater was closed to all but flood-related and emergency traffic. We supplied a person to assist with communications to the Red Cross shelter at the Coal City High School, and another two hams to the village hall to help with both radio and phones. We had seven other EMA/ARES members working the field delivering sand bags and checking in on residents, as well as checking water levels, and reporting back to the village hall."

Neil Ormos, N9NL, DEC for Cook County/Chicago, reported that he hasn't heard of any ham radio activations in Cook County yet, "but if people have been activated, they may be too busy to report. In general, conventional communications systems are working. The Red Cross has four shelters open in Cook County, but they are using conventional communications and have not sought ham radio assistance."

In Indiana, only one county -- Harrison County in the southern part of the state -- has had an official ARES activation. According to AEC Scott Taylor, K9SET, the area had no phones -- either landline or cell -- or electricity. "I recorded several 70 MPH gusts on Monday, and there are many, many trees and power lines down, as well as major structural damage to homes and business here in my town of Corydon. It may be three

to five days for some to get power. Only a few businesses seem to have power, but no residences have it at this time."

In Dearborn County and Southeastern Indiana, there has been "much storm damage," said Dearborn County EC Ken Courtney, WA9BLA. "On Tuesday, we had winds here from 1:30 PM to 5:30 PM; on Sunday, we recorded gusts of 70 to 80 MPH across the area wide -- hurricane Category 1 strength. A mobile home rolled over and a semi was blown over on the I-275 bridge to Kentucky. There have been four fatalities in the Greater Cincinnati area, all with trees falling on people; one fatality was in Ohio County, Indiana."

Courtney said that several hams will be doing disaster damage surveys later this week for the Dearborn County Homeland Security Agency.

The ARRL is still receiving reports from the field concerning recovery efforts from these states. We will be updating our information as it becomes available. To catch up on the latest information, please visit the ARRL Web site <http://www.arrl.org>.

==> W1AW SUPPORTS ECHOLINK OPERATIONS DURING IKE

Throughout the course of Hurricane Ike, operators at W1AW, the Hiram Percy Maxim Memorial Station, hooked into the HF radio of ARRL West Gulf Vice Director David Woolweaver, K5RAV, via EchoLink <http://www.echolink.org/>.

According to W1AW Station Manager Joe Carcia, NJ1Q, the link enabled hams in Newington to monitor the Texas Emergency Net. "Through Dr Woolweaver's initiative, we could use EchoLink in this fashion to assist ARRL HQ staff monitor critical Net operations using HF -- a capability we have never taken advantage of before."

Carcia said that the reason the HF/EchoLink connection was used was due to the frequency the Texas Emergency Net was using. "The Net was on 75 meters," Carcia said, "and propagation did not favor us here in New England to be able to hear the transmissions. By using Dr Woolweaver's link, we could hear everything on the Net."

During the monitoring sequence, Woolweaver changed the frequencies on EchoLink to enable ARRL HQ to stay on top of and monitor conversations related to message relays, Coast Guard contacts and Health and Welfare traffic from across Texas and the surrounding states. According to ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, this capability will be critical to future emergency communication response at ARRL Headquarters: "Without the EchoLink/HF connection, we here at ARRL would not have able to be in contact with ARRL South Texas Section Leadership."

Woolweaver is working on getting more Texas stations involved in the EchoLink network to help out with future emergencies. He said that EchoLink can be successfully utilized to monitor and to engage stations on VHF and HF. "Using stations with EchoLink node capabilities and

access to VHF and HF equipment, W1AW and other personnel at HQ will be able to become active participants and consultants in local and regional operations," he said. "You cannot underestimate the value of first hand information. The EchoLink to remote HF connection allows W1AW and ARRL staff to monitor and participate in local and regional operations any where any time. It does not get much better than that!"

==> THIRD ANNUAL ARRL ON-LINE AUCTION SET FOR OCTOBER

The Third Annual ARRL On-Line Auction kicks off October 23, running until November 1 on the ARRL Web site <http://www.arrl.org/auction>. This is your chance to pick up one-of-a-kind Amateur Radio items. To see what the Auction will offer this year, be sure to check out the Auction preview that begins October 16. Last year, the Auction attracted more than 3000 registered bidders from more than 40 countries. While the majority of buyers were from the USA, Canada and the UK, there were buyers from Australia, Malaysia, Grenada, Vietnam and Tanzania.

According to ARRL Chief Operating Officer Harold Kramer, WJ1B, "Last year's on-line auction -- our second -- proved to be a successful and enjoyable event for both hams and ARRL staff members alike. When the bidding ended, we realized that we had sold 162 items and raised just over $50,000." Proceeds from the auction benefit ARRL education programs including activities to license new hams, strengthen Amateur Radio's emergency service training, offer continuing technical and operating education, as well as creating instructional materials.

ARRL Business Services Manager Deb Jahnke, K1DAJ, encouraged everyone to come and peruse the wide variety of offerings: "Browse through the Web site frequently, as items will be added on a daily basis. We also encourage you to look through the 'Help' and 'About Us' sections. You'll find useful information about bidding, FAQs and a host of other facts. To ensure an enjoyable experience, please be sure to read all policies under the 'About Us' section."

This year's auction will again include many transceivers and other items that have appeared in the QST Product Review column and have thus been thouroughly tested by the ARRL Lab. There will be many vintage items offered, as well. Also, returning by popular demand will be four ARRL Lab unique "junque" boxes. These boxes have a starting bid of $50 and have almost anything you could ever possibly imagine in them. No one -- except the ARRL Lab staff -- knows what exactly is inside each box, but each is guaranteed to be full of things that the Lab staff consider valuable (but keep in mind that they collect just about anything).

Jahnke said that due to many requests last year, "all product review items in the On-Line Auction include a link to a PDF file of the actual Product Review, as well as a reference to the QST issue that the review appeared in."

==> BRENNAN PRICE, N4QX, RETURNS TO ARRL STAFF

Brennan Price, N4QX, returned to the ARRL Staff as the League's Technical Relations Manager on September 15, filling the vacancy created by the retirement of Paul Rinaldo, W4RI, earlier this summer. From 2000-2004, Price served as Field and Regulatory Correspondent and Assistant Technical Editor at ARRL Headquarters. As Technical Relations Manager, he will be responsible for representing the ARRL's interests to federal government agencies, the International Telecommunication Union (ITU) and other international organizations, and regional telecommunications organizations, personally and through the supervision of other Technical Relations Office staff.

Saying that his goal is to "defend Amateur Radio spectrum, and if the opportunity presents itself, help gain some," Price is currently preparing for a meeting of United States Working Party 5A -- which considers issues in the Amateur Radio and Land Mobile services -- in Washington next week.

Price holds a BA in chemistry from Vanderbilt University, an MS in chemistry from Georgia Institute of Technology (Georgia Tech), and a JD with honors from the University Of Connecticut School Of Law, where he was appointed Executive Editor of the "Connecticut Law Review." Admitted to the Connecticut bar in 2005, he had been in private practice with a firm in Hartford. Price was first licensed in 1997 as KF4UZB, earning his Amateur Extra class license by 1999, acquiring the call signs KU4WJ and N4QX in the process. He is an ARRL Volunteer Counsel <http://www.arrl.org/FandES/field/regulations/local/vci.html> and has stayed current with regulatory issues affecting the ARRL and Amateur Radio.

While at the "Law Review," Price was invited to publish a scholarly summary of case and statutory law related to PRB-1, the FCC's limited preemption of Amateur Radio antenna and antenna support zoning restrictions <http://www.arrl.org/FandES/field/regulations/PRB-1_Pkg/Price.pdf>. This 29 page summary is designed to inform amateurs and their counsel, as well as municipal counsel, of the state of the law before any party adopts an unwise strategy

"We are fortunate to have filled this key position with someone with Brennan's experience, training and passion for Amateur Radio," said ARRL Chief Executive Officer David Sumner, K1ZZ. "His strong regulatory background and knowledge of the ARRL as a former staff member and active volunteer will help him come up to full speed very quickly. He jumped into preparations for the 2011 World Radiocommunication Conference (WRC-11) on his first day back."

Price said he welcomes the chance to return to ARRL and join its Technical Relations staff: "The League's Technical Relations efforts have paid tangible dividends to Amateur Radio operators over the years: Our allotment at 60 meters and more broadcaster-free space on 40 meters are but two examples. I am pleased to have the chance to advocate for Amateur Radio on the national and international stage. Although WRC-11 is three years away, preparatory work is well underway, with Technical

Relations Specialist Jon Siverling, WB3ERA, representing the ARRL at a meeting of a Permanent Consultative Committee of the Inter-American Telecommunication Commission (CITEL) in Argentina this week."

When not at work or on the air (he especially enjoys operating CW on 10 meters), Price enjoys officiating football and playing chess.

==> ARRL WELCOMES USTTI STUDENTS

Next month, the ARRL will welcome students from various countries from all over the world who want to learn how to administer and regulate Amateur Radio programs in their home countries. This course, offered by the United States Telecommunications Training Institute (USTTI) <http://ustti.org/>, will help participants create, administer and foster an Amateur Radio Service in their countries.

Designed for those in developing countries who regulate and manage their country's Amateur Radio Service, this course will help participants learn just who radio amateurs are. ARRL staff instructors will help course participants discover the ever-expanding universe of Amateur Radio communication. They will explain why Amateur Radio operators -- upwards of three million individuals in virtually every country of the world -- have earned licenses to operate stations in the Service and why they are recognized, both by their governments and internationally, as a valuable voluntary telecommunications resource. Course participants will also discover how a telecommunications administration can bring the benefits of a healthy Amateur Service to its nation.

Now in its 26th year, USTTI is a nonprofit venture involving leading US-based communications and information technology corporations and leaders of the federal government cooperating to provide tuition-free management, policy and technical training for talented professionals from the developing world. This is the 24th year the ARRL has participated in the program.

==>SOLAR UPDATE

Tad "To taste the luxury of sunny beams" Cook, K7RA, this week reports: Last week saw another brief sunspot appearance followed by a quick fade. This was an old Solar Cycle 23 spot -- number 1001 -- resulting in a sunspot number of 12 for September 11. Sunspot numbers for September 11-17 were 12, 0, 0, 0, 0, 0 and 0 with a mean of 1.7. The 10.7 cm flux was 66.9, 66.3, 66.4, 66.8, 67.5, 69.4 and 67.1 with a mean of 67.2. Estimated planetary A indices were 2, 2, 0, 6, 15, 9 and 3 with a mean of 5.3. Estimated mid-latitude A indices were 1, 0, 0, 4, 11, 7 and 3 with a mean of 3.7. For the near term, nothing indicates any emerging sunspots. The geomagnetic indicators should remain quiet with a planetary A index of 5 until the end of the month. From September 30-October 2, the planetary A index is expected to be 8, 30 and 8. Eight is a low number, but 30 indicates a geomagnetic storm, probably expected from a recurring coronal hole spewing a strong solar wind. For more information concerning radio propagation, visit the ARRL Technical

Information Service Propagation page
<http://www.arrl.org/tis/info/propagation.html>. To read this week's
Solar Report in its entirety, check out the W1AW Propagation Bulletin
page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought
to you by John Keats' "I Stood Tip-Toe upon a Little Hill"
<http://www.bartleby.com/126/2.html>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the ARRL 10 GHz and Up
Contest and the ARRL International EME Competition are on September
20-21. YLRL Howdy Days are September 18-20. The NCCC Sprint is September
19 and the Feld Hell Sprint is September 20. Be on the lookout for these
contests on September 20-21: The Colorado QSO Party, the SARL VHF/UHF
Contest, the Scandinavian Activity Contest (CW), the CIS DX Contest, the
South Carolina QSO Party, the Washington State Salmon Run and the QCWA
Fall QSO Party. The Run for the Bacon QRP Contest and the 144 MHz Fall
Sprint are both on September 22. The SKCC Sprint is September 24 and the
BCC QSO Party is September 25. Next weekend is the NCCC Sprint on
September 26 and the AGCW VHF/UHF Contest on September 27. Look for the
CQ Worldwide DX Contest (RTTY), the Texas QSO Party and the Scandinavian
Activity Contest (SSB) on September 27-28. The UBA ON Contest (CW) is
September 28 and the 222 MHz Fall Sprint is September 30 (local time).
The RSGB 21/28 MHz Contest is October 1. All dates, unless otherwise
stated, are UTC. See the ARRL Contest Branch page
<http://www.arrl.org/contests/>, the ARRL Contest Update
<http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar
<http://www.hornucopia.com/contestcal/index.html> for more info. Looking
for a Special Event station? Be sure to check out the ARRL Special Event
Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains
open through Sunday October 5, 2008 for these online course sessions
beginning on Friday October 17, 2008: Amateur Radio Emergency
Communications Level 2 (EC-002); Antenna Modeling (EC-004); HF Digital
Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008),
and Radio Frequency Propagation (EC-011). Each online course has been
developed in segments -- learning units with objectives, informative
text, student activities and quizzes. Courses are interactive, and some
include direct communications with a Mentor/Instructor. Students
register for a particular session that may be 8, 12 or 16 weeks
(depending on the course) and they may access the course at any time of
day during the course period, completing lessons and activities at times
convenient for their personal schedule. Mentors assist students by
answering questions, reviewing assignments and activities, as well as
providing helpful feedback. Interaction with mentors is conducted
through e-mail; there is no appointed time the student must be present
-- allowing complete flexibility for the student to work when and where
it is convenient. To learn more, visit the CCE Course Listing page

<http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARISS Update: On September 13, Prairielands Council Scouts attending the Space Jamboree at Chanute Air Force Base in Rantoul, Illinois participated in an Amateur Radio on the International Space Station (ARISS) contact with Flight Engineer Greg Chamitoff, KD5PKZ. Telebridge station WH6PN in Hawaii assisted with the contact. Thirteen Scouts were able to ask Chamitoff 17 questions during the pass. Scout leaders replayed the question and answer session later in the day for all 3000 Scouts attending the Jamboree. The audio was fed into the EchoLink AMSAT server and Internet Radio Linking Project (IRLP) Reflector 9010. Currently, ISS Expedition 17 has three ham astronauts on board: Chamitoff, Commander Sergei Volkov, RU3DIS, and Flight Engineer Oleg Kononenko, RN3DX. Chamitoff is scheduled to return to Earth next month when the space shuttle brings Flight Engineer Sandra Magnus, KE5FYE, part of Expedition 18, to the ISS; Commander Michael Fincke, KE5AIT, will lead Expedition 18, arriving on the ISS via a Soyuz flight with Flight Engineer Salizhan Sharipov. ARISS notes that school contact approvals have been delayed due to the closure of Johnson Space Center for Hurricane Ike. To date, ARISS has supported 360 ISS-to-Earth school contacts and 10 terrestrial contacts.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

913. Collins Radio is 75 years old!

Newsgroup: rec.radio.amateur.moderated
Date: 2008-09-19 19:39:04 UTC
From: KC4UAI <kc4uai@gmail.com>
Message-ID: <d7de475a-8568-4642-b261-587694dcff98@73g2000hsx.googlegroups.com>
Source record: 2484

All,

In case you missed the announcement on the ARRL website:

http://www.arrl.org/news/features/2008/09/11/10326/?nc=1

Collins Radio celebrates it's 75th year over the next week, starting
on 9/20/2008 at 0:01 UTC though 9/26/2008 23:59 UTC.

Why do you care?

Well... If you collect QSL cards and would like to get the card that
celebrates this once in a lifetime event, all you need to do is
operate 4 out of the 6 club stations and get a QSL card from each,
then turn in these 4 cards for the special event certificate. It will
be quite a challenge to get 4 of the stations in the next week, but if
you have the time and keep an eye on the DX Spotting clusters this
could be a fun thing to try.

Why do I care?

Well, personally I'll be operating W5ROK for a number of hours during
this event. We are competing among ourselves to see who can do the
best job of logging QSO's. I doni¿½t think Ii¿½ll win, but I intend to
make it as hard as I can on the guys who will. I plan to operate
voice and PSK and I need your help getting your call into our log!

Warm up that station, watch the DX spotting clusters and give us a
call.

Let's Operate!

KC4UAI

914. BREAKING NEWS FROM AMATEUR RADIO NEWSLINE - D-STAR ASSISTS ROUTE 66 EVENT AND GARRIOTT TO OPERATE ARISS FROM SPACE

Newsgroup: rec.radio.amateur.moderated

BREAKING NEWS FROM AMATEUR RADIO NEWSLINE

The following two items arrived after our regular newscast was
released. While we will include synopses in our next newscast, their
importance requires release at this time.

ARNewsline

FROM ICOM:

ï¿½Route 66 On The Airï¿½ Adopts D-STAR Digital Radio Operations

BELLEVUE, WA (September 10, 2008) ï¿½ During the running of the 2008
Route
66 On The Air, event leaders will be adding the D-STAR digital
communications mode to the existing HF/VHF/UHF analog modes. From September
13 ï¿½ 21, over a dozen ham radio clubs located along the famous
highway
are taking part as official participants. The Citrus Belt Amateur Radio
Club out of San Bernardino, CA is the sponsoring club that is hosting this,
the 9th annual running of the event.

The event is not a race. According to the eventï¿½s official Website
(http://www.w6jbt.org/): ï¿½The purpose of this event is an
opportunity to
offer amateur radio operators a fun way to "Relive the Ride" and their own
memories of Route 66, and to celebrate the highway's 82nd anniversary.ï¿½
ï¿½

A list of special events radio stations can be found on
http://www.w6jbt.org/Route_ota/General_Pages/SpecialEventStations.htm.

Not all stations will be utilizing D-STAR. A partial list includes special
event station:

Lovation of Rout 66 Special Event Callsign

Kingman, AZ, USA W6F
Albuquerque, NM, USA W6H
Oklahoma City, OK, USA W6K
Joplin, MO, USA W6N Station will be active 9-19-08 08:00 ï¿½ 17:00

Central Time
Lebanon, MO, USA W6O Station will be active 9-19-08 08:00 ï¿½ 17:00
Central
Time
St. Louis, MO, USA W6P Station will be active 9-20-08 08:00 ï¿½ 17:00
Central Time
Chicago, IL, USA Rover Station WD5ERD via NS9RC port B

Station will be active 9-21-08 08:00 ï¿½ 17:00 Central Time

To contact these stations, the special event 1x1 callsign is to be entered into the URCALL Field (With the exception of Chicago which will be a zone call /NS9RC B) with the RTP2 set for gateway use.

For a modest fee, a special D-STAR certificate is available for hams who ï¿½workï¿½ (complete a successful two-way conversation with) at
least one
of the official special event D-STAR club stations or a participating D-STAR mobile station signing "mobile 66". Please visit the official Website for details. (<http://www.w6jbt.org/>http://www.w6jbt.org/)

About Route 66: The fabled ribbon of highway that ï¿½winds from
Chicago to
L.A.ï¿½, as sung by Nat King Cole, was established in 1926 and served
as
the first major improved highway to cross the nationï¿½s heartland and southwest regions. Route 66 holds a special place in mid 20th century Americana, featured in many songs and stories. The highway was decommissioned in 1986 in favor of the newer US interstate system, which did not follow the same route. Some portions of the original Route 66 still exist.

For more information please contact Fred Varian at 425-454-8155 or by
e-mail to
fredvarian@icomamerica.com

FROM ARISS

Richard Garriott, W5KWQ, to communicate with Students and Ham Radio Operators World-wide through the Amateur Radio Station on-board the International Space Station (ISS)

Through multiple agreements with NASA, the Russian Space Agency, RSC Energia, Space Adventures Ltd, and ARISS (Amateur Radio on the International Space Station), Richard Garriott will fly to ISS and will communicate with students, ham radio operators, friends, and family world-wide using the ARISS amateur radio station on-board the ISS.

Richard Garriott, with the amateur radio callsign, W5KWQ is the sixth private citizen to be flown by the Russian space agency to the ISS. A

legendary video game programmer and designer, Garriott will be traveling to orbit this October and will speak with hundreds of students while thousands more listen in during a series of ten-minute ham radio contacts. His on-orbit stay on Soyuz and ISS is planned for October 12 ï¿½ 22, 2008.

The locales for the worldwide student contacts include eight Challenger Learning Centers in the U.S., the Austin Liberal Arts and Sciences Academy in Austin, Texas, the Pinehurst School in Ashland, Oregon, the Budbrooke School in the U.K., and the National Space Challenge in Kuala Lumpur, Malaysia. Garriott also plans to have random chats with scouts world-wide as part of the amateur radio ï¿½Jamboree on the Airï¿½ which is planned for
October 18-19.

ï¿½An important aspect of Richard Garriottï¿½s mission is to encourage
studentsï¿½ interest in science and technology through the amateur radio
contacts,ï¿½ said Rosalie White, ARISS International Secretary-Treasurer
and ARISS Program Manager for ARRL (American Radio Relay League). ï¿½ ARISS
team members from all over the world volunteer their time every day so that students receive opportunities that we hope will cause them to study harder and learn more about any educational subject.ï¿½

The connection from the ISS to individual student locations will be established through an amateur radio station set up directly at the school or through the ARISS network of worldwide amateur radio ground stations utilized to link Garriott directly with students. The amateur radio system works similar to the way mission control centers in the United States and Russia talk to their space explorers.

To date, the ARISS international working group volunteer team has conducted over 360 school contacts with crew members using ham radio on the ISS. The team has also set up radio contacts for family members of space explorers via ham radio. And have enabled countless contacts between the ISS crew members and hams on the ground. All previous Space Adventures private citizens who have flown to ISS have used the ARISS equipment to talk to school students, ham radio operators and friends and family.

As part of Richard Garriottï¿½s science investigations, he will be taking
high definition photographs of many parts of the Earth and comparing them to photos taken on previous space missions. In conjunction with his Earth science investigation, Mr. Garriott is flying special amateur radio electronics that will enable him to send and receive low resolution images from space, comparable to cell phone images. Through this ham radio system, called Slow-Scan Television (SSTV), Garriott will beam down images of the Earth to schools and ham radio operators on the ground so that they can actively participate in his mission.

Frank Bauer, KA3HDO, ARISS International Chairman and AMSAT Vice President for Human Spaceflight Programs, states: ï¿½The ARISS team is quite excited about Richardï¿½s flight. He is very interested in bringing the wonders of space to those of us on Earth and he sees amateur radio as a great mechanism to make that happen. Through his school and scout voice contacts, his SSTV image downlinks and his communications with the world-wide amateur radio community, we see his mission as being ï¿½action packedï¿½ from an amateur radio perspective.ï¿½ Bauer continues, ï¿½What is extra special is that Richard Garriottï¿½s flight coincides almost 25 years from when his father, Owen Garriott, made history as the first ham radio operator to communicate with radio amateurs from space on the STS-9 Space Shuttle mission.ï¿½ Owen Garriottï¿½s call sign is W5LFL. Richard also hopes to link up with his father via amateur radio during his flight.

Currently, Mr. Garriott is finishing his final spaceflight preparations at the Gagarin Cosmonaut Training Centre (GCTC) located in Star City, Russia. His launch date is scheduled for October 12, 2008, with ISS docking planned for October 14 and undocking planned for October 22. Mr. Garriott was trained thoroughly to be a member of the Soyuz TMA-13/17S crew.

Since its first flight with Owen Garriott, in November 1983, Ham Radio has flown on more than two-dozen space shuttle missions, on the Mir Space Station and on the ISS. ARISS is the first and longest continuous operating educational outreach program to fly on the ISS. ARISS is an internationally-based working group, sponsored by the national amateur radio organizations and the international AMSAT (Radio Amateur Satellite Corporation) organizations from each country as well as the ISS space agency partners. In the United States, ARISS is sponsored by the American Radio Relay League (ARRL), the Radio Amateur Satellite Corporation-North America (AMSAT-NA) and the National Aeronautics and Space Administration (NASA). NASAï¿½s education office provides support to ARISS and guidance in the development of ARISS educational objectives.

The primary purpose of ARISS is to allow students engaged in a science and technology curriculum to speak with an astronaut orbiting the Earth on the International Space Station. Using amateur radio, students ask questions about life in space or other space-related topics. Students fully participate in the ARISS contact by helping set up an amateur radio ground station at the school and then using that station to talk directly with the on-board crew member. Preparation for the experience motivates the children to learn about radio waves, space technology, science, geography and the space environment. In many cases, the students help write press releases and give presentations on the contact to their fellow students and to the local community. Through this hands-on experience, students are engaged and educated in the Science, Technology, Engineering and

Mathematics (STEM) fields, and are inspired to pursue STEM-related careers.

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Doug has made some valid suggestions but another is that RF is getting into your PSU and causing it to drop out of regulation. The IC718 does not like a low supply voltage- once it drops less than 13V the 718 tends to reduce power. (This could explain the "hum".)

There are a couple of other ideas: you aren't trying to measure the PO in AM are you? The 718 runs about 40W on AM. Also, you've not wound the power down and had it slip your mind? (Although never would explain the "hum".

Amateur Radio Newsline(tm) Report 1624 - September 26, 2008

Amateur Radio Newsline report number 1624 with a release date of Friday, September 26th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. Sunspots continue to elude ham radio but is that about to change? Also, 40 meters should soon be clear of a lot of broadcasters, another ham will soon be headed into space, the trial of an accused murderer of a ham radio couple begins and two young hams will soon be headed on the Dxpedition of a lifetime. Find out who they are on Amateur Radio Newsline(tm) report number 1624 coming your way right now.

RADIO SCIENCE: MORE INFO ON SOLAR CYCLE DELAY

If you are still waiting for all the D-X that was promised last year, you are not alone. Jim Linton, VK3PC, of the WIA News reports:

--

The false start announced last year for the new Solar Cycle 24 has been followed up with speculation of things like ï¿½double dip' minima and even a
new ice age for sunspots. But let's try to stay positive and not subscribe
to thoughts of another minimum of 70 years, as occurred from 1645 to 1715, the only flat-lining in sunspot cycles since records.

Looking back at the onset of previous cycles that followed prolonged periods without sunspots, gives indication that Cycle 24 may have a much greater start-up intensity. Should it behave like Cycles 11 to 14 in the 19th century there will be more years rising and a shorter period in decline.

The latest prediction is that Cycle 24 will be begin in mid 2009. Stay tuned.

The prolonged solar minimum is also occurring at a time of reports in the northern hemisphere of continued sporadic-E enhancement on both the ten and six metre bands.

For the amateur Radio Newsline, I'm Jim Linton, VK3PC.

--

VK3PC adds that Greyline propagation on the High Frequencies is also is experiencing a lack of geomagnetic disturbance. That he says is a good thing. (WIA News)

**

RADIO SCIENCE: NEW SUNSPOT EMERGES

And one encouraging note. Space Weather reports that for the first time in months, a significant sunspot is emerging on the solar disk. Its described as a fast-growing active region with two dark cores, each larger than Earth. The magnetic polarity of the sunspot identifies it as a member of new Sunspot Cycle 24. This is viewed as an encouraging sign that the 11-year solar cycle is indeed progressing, albeit very, very slowly. (SpaceWeather)

**

RADIO LAW: BROADCASTERS SOON TO CLEAR PARTS OF 40 METERS

Ham radio should soon have less interference to contend with on 40 meters. This if all goes as its supposed to in about six months time when those powerful shortwave broadcast stations are supposed to move away from 7.1 to 7.2 MHz as that spectrum fully reverts to the Amateur Service.

By way of background, before 1938 there was an exclusive amateur allocation of 7.0 to 7.3 MHz. But due to world unrest that band parcel was taken away to accommodate propaganda broadcasting in the lead up to World War II.

It had been thought it would be returned to the Amateur Service afterward, but its use for broadcasting continued due to the Cold War. In fact broadcasting increased the size of its primary allocation. While in some parts of the world radio amateurs managed to retain 7.0to 7.3 MHz only the bottom third was amateur exclusive and the remainder shared with shortwave broadcasters.

So, the International Amateur Radio Union mounted a campaign for the 40m band to be return globally to the Amateur Service. Its case stated that such as change would ensure effective communications support particularly in the event of natural disasters.

The I-A-R-U pursued the issue at the World Radiocommunications Conference in 2003. There its work gained 7.1 to 7.2 MHz worldwide for the Amateur Service. It also got an extra 100 kilohertz added on the exclusive allocation, while sharing between 7.2 and 7.3 MHz continues. (WIA News)

**

HAM RADIO IN SPACE: W5KWQ HEADING TO SPACE IN OCTOBER

Richard Garriott, W5KWQ, the son of former astronaut Owen Garriott, W5LFL, will be the next space tourist visiting the International Space Station. And like his dad, he too plans to talk to those on the ground using ham radio.

A legendary video game programmer and designer, Richard Garriott will be traveling to orbit this October. While on the International Space Station, W5KWQ plans to speak with hundreds of students while thousands more listen in during a series of ten-minute ham radio contacts. Among the localities planned for contact with Garriott are the eight Challenger Learning Centers iacross the United States. the Austin Liberal Arts and Sciences Academy in Austin, Texas, the Pinehurst School in Ashland, Oregon, the Budbrooke School in the U.K., and the National Space Challenge in Kuala Lumpur, Malaysia.

Barring any unforseen launch delays Garriott's on-orbit stay is planned for October 12th to the 22nd. W5KWQ also plans to have random chats with scouts world-wide as part of the amateur radio "Jamboree on the Air" which
is slated for October 18th and 19th.

If all goes as planned, W5KWQ will be the sixth private citizen to be flown by the Russian space agency to the I-S-S. More information about his flight and the part that ham radio will play in it is on-line at www.ariss.org and www.richardinspace.com. (ARISS)

**

HAM RADIO IN SPACE: ARISS NEEDS WEB ASSISTANTS FOR GARRIOTT FLIGHT

I'm Bill Pasternak, WA6ITF, with more news on the upcoming flight of Richard Garriot

Early on in his flight, W5KWQ expects to setup a Kenwood VC-H1 portable video transceiver and transmit a new Earth image every 3 minutes. He hopes to have this system on a great deal of his flight and ARISS is encouraging the ham community to bring SSTV equipment into schools and download these images for students in real-time.

But that's not all. ARISS also plans to display images from hams around the
world on a special on a web and blog site. A beta site has been developed and will be rolled out to the ham community in the near future.

To successfully implement the on-line SSTV picture site and support it around the clock during Garriott's flight, ARISS will need some savvy individuals that can sort through the many SSTV photos and keep the SSTV site up to date in near real time. ARISS says that it is looking for global support from a few individuals in each international region to make this happen. That way it will not be asking any one person to volunteer on an around the clock basis.

Obviously, some computer skills will be required. If you are interested in helping on this, please contact ARISS International Chairman Frank Bauer, KA3HDO. His E-Mail is ka3hdo at comcast dot net and mention that you heard the request on Amateur Radio Newsline(tm)

Again that e-mail address is is ka3hdo at comcast dot net to volunteer for support of the SSTV website being established for the flight by ARISS.

(ARISS)

**

RESTRUCTURING: VK HAMS TO GET LF ALLOCATION

Australia is set to join the 30-odd countries whose radio amateurs have been already given the new low frequency amateur band of 135.7 to 137.8 kHz.

The Australian Communications and Media Authority has released its draft Australia Radio Frequency Spectrum Plan that is to come into force on the 1st of January 2009. It includes 135.7 to 137.8 kHz for the Amateur Service on a secondary basis. This means that VK radio amateurs cannot cause harmful interference to radio-navigation service stations that continue to operate in a number of countries.

The permitted maximum radiated power is one watt effective isotropic radiated power. The New Year should see the Australian Advanced License, gain this band as a new operating privilege. (WIA News)

RADIO LAW: TRIAL OF ACCUSED KILLER OF HAM RADIO COUPLE BEGINS

The trial of the man accused of plotting the murders at sea of a pair of ham radio operators has begun with jury selection on Monday, September 22nd. Amateur Radio Newsline' Bruce Tennant, K6PZW, has been following the case and has the latest:

--

The trial of Skylar Deleon, accused of masterminding the 2004 murder of an Arizona ham radio couple is now underway. The former child actor along with four other defendants, are charged with the 2004 special circumstances murder of Thomas and Jackie Hawks, KD7VWJ and KD7VWK on their boat off-shore at Newport Beach, California.

Deleon's trial is being held at the Orange County California Courthouse. Prosecutors are asking the death penalty against Deleon and co-defendant John Fitzgerald Kennedy. Deleon and Kennedy are being tried separately.

Prosecutors claim that Deleon approached the couple with an offer to buy their 55-foot yacht called Well Deserved. The state alleges that Deleon and accomplices then killed the couple on November 15, 2004, when they took him and two other men out for a test run. Prosecutors say that that the

couple was handcuffed, tied to an anchor and dumped alive into the ocean after being forced to sign paperwork transferring the boat's title to Deleon. Their bodies have never been found.

News reports say that jury selection could see up to 1,000 local residents questioned to determine their suitability to serve on a death penalty case. The trial itself is expected to last as long as 14 weeks

Already convicted and sentenced to a pair of life sentences without the possibility of parole is Deleon's former wife Jennifer. After only four hours of jury deliberation she was found guilty on two counts of first degree murder on November 17, 2006. During her trial prosecutors showed evidence that she and Skylar Deleon cleaned the boat with bleach wipes and destroyed evidence and personal items belonging to the Hawks.

For the Amateur Radio Newsline I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Bruce will have more on the Deleon trial in future Amateur Radio Newsline reports. (Orange County Register and other published reports)

**

ENFORCEMENT: ANOTHER ALLEGED UNLICENSED STATION OPERATOR INCARCERATED IN FLORIDA

Another alleged unlicensed radio station operator is in jail in Florida. According to Inside Radio magazine for September 10th, authorities in the city of Wilton Manors arrested 23-year-old Constantinos Rigalos for apparently operating an illegal FM radio station. According to the magazine article, Rigalos bail was set at $2,000. Unlicensed broadcasting is a third-degree felony in Florida. (CGC)

**

RESCUE: HIKING HAM RECUED BY QRP RADIO AND MORSE CODE

Knowing Morse code helped an injured ham summon help. This, after being hurt in an accident high in the Cascade mountains of Washington State.

Over the weekend of September 20th Glenn Russell Ruby Jr, W7AU, of Corvallis, Oregon, was hiking in the Cascades when he slipped and suffered a broken his leg. He made it back to his camp site where he used his Elecraft K-1 portable QRP station to send out a call for help on 40 meter C-W. He was able to contact Bob Williams, N7ODM, of Bozeman, Montana. Ruby asked Williams to notify the Snohomish County Search and Rescue in Washington State.

Williams did. He then tried to keep in contact with Ruby. Signals faded out at about 8 p.m. local time but contact was resumed the next morning around 9 a.m. on 7.051 MHz. After that the two hams kept in communications until Ruby was evacuated on horseback from the site by Search and Rescue on Monday, September 22nd. Bad weather in the area had prevented a helicopter

rescue.

You can read a more in-depth account of the rescue of W7AU on the ARRL website newspages. Thats in cyberspace at www dot arrl dot org. (ARRL)

**

PUBLIC SERVICE: D-STAR TRAVELS ROUTE 66

D-STAR became one of the modes used during the recent "Route 66 On The Air" commemorative operation that ran from September 13th to the 21st. According to the event website, 7 of the 17 special event stations were D-Star digital voice operations. The D-Star stations were W6F in Kingman, Arizona; W6H in Albuquerque, New Mexico; W6K on Oklahoma City; Missouri stations W6N in Joplin, W6O in Lebanon and W6P in St. Louis. At the Eastern end of the road in Chicago, W6Q was also a D-Starr operation.

For those not aware, the purpose of "Route 66 On The Air" is to give hams a fun way to "Relive the Ride" and their own memories of Route 66. This year the Citrus Belt Amateur Radio Club out of San Bernardino, California was the sponsoring club. Over a dozen other ham radio organizations located along the famous highway took part as official participant stations. More is on line at www.w6jbt.org (Icom)

**

PUBLIC SERVICE: HAM RADIO AND THE PONY EXPRESS

Ham radio was scheduled to be the communications arm of the 2008 Pony Express trail ride. This, as a part of the September 20th Wild West Extravaganza in Nye County, Nevada..

According to Nevada's Pahrunp Valley Times, the Southern Nye County Amateur Emergency Services was slated to coordinate water stops for the horses and provided a shadow communications network to watch over riders in case they experienced problems. Hams would also function as an adjunct to the Sheriff's Auxiliary for traffic control. Two operators were to be on hand at the end of the trail to provide status reports on the riders carrying the mail.

The ARES members taking party members rode the route in the emergency assistance trailer, the water truck and with the sheriff's auxiliary. The news article said that ham radio was again chosen as to support the event because it has proven to be the only type of communications that spans the distances covered by the trail ride. (Parhump Valley Times)

**

RADIO LAW: NOI ASKS IF ALL SATELLITE RADIOS ALSO RECEIVE HD RADIO AND VICE VERSA

The FCC has released a Notice of Inquiry on issues dealing with receivers for digitally based entertainment radio systems. Media Bureau Docket

08-172 asks if devices capable of receiving Satellite Digital Audio Radio Service should also be forced to include reception capabilities for terrestrial digital audio broadcast , H-D Radio or any other technologies capable of providing audio entertainment services. The same notice also asks if devices capable of receiving terrestrial H-D Radio be forced to include the ability to receive Satellite Digital Audio Radio Service or any other technologies capable of providing audio entertainment services.

The upshot of such a law would be to have one type of consumer receiver marketed that would be capable of receiving every form of digital radio entertainment service no matter where the signals came from. It does not mean that the now fee based services would be free, only that one receiver would be capable of receiving all of them.

The downside of coarse is that such a receiver would likely be far more expensive to produce than those currently designed for a particular digital radio service. This in turn leads to the question of consumers being foirced to pay for a device that includes the ability to receive services that they might not ever want.

The commentary cutoff deadline on M B 08-172 is November 10th with reply comments due no later than December 9th. The link to the actual Notice of Inquiry is
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-08-2092A1.doc (CGC, FCC)

**

RADIO CONFERENCES: NAB SEEKS PAPERS FOR APRIL 2009 GATHERING

One of the worlds leading communications groups is looking for presentations for an upcoming conference. Amateur Radio Newsline's Jeff Clark, K8JAC, says whom it is and what it wants:

--

The National Association of Broadcasters is asking for technical papers for its next Broadcast Engineering Conference. Radio topics suitable for technical papers include data broadcasting, AM directional antenna systems, automation systems, surround sound, audio coding and H-D Radio implementation, to name a few.

If selected for publication in the Broadcast Engineering Conference Proceedings, the papers would be presented at NAB2009. That show runs April 18th to the 23rd.

For more information please Contact John Marino, vice president, NAB Science & Technology, at jmarino@nab.org. The deadline for submitting a proposal is Oct. 17. If selected, the actual paper would be due Jan. 16, 2009.

I'm Jeff Clark, K8JAC.

--

To submit a technical paper proposal, complete the electronic form found at www.nabshow.com/2009/forms/beccallforpapers.asp) (RW)

NAMES IN THE NEWS: W1KRB LEAVES ARRL HQ

Turning to some namrs in the news. First, word that the lady from ARRL headquarters with the never ending smile has departed from League service. This, with word that ARRL Membership Manager Katie Breen, W1KRB, has resigned her post at and is relocating away from her native Connecticut.

Breen, who is moving to the mid-West has been one of the most popular ARRL representatives to grace hamfests and around the country. She has also been known for her videos that have been posted online that promote the ARRL to members and non-members alike. W1KRB also headed up the ARRL team at the 2008 Dayton Hamvention this past May. (ARRL)

**

NAMES IN THE NEWS: GRIFFIN THE FUTURE OF THE SHUTTLE

And NASA administrator Michael Griffin has re-affirmed his backing for a White House directive that calls for the 2010 retirement of the shuttle. This, after a Florida newspaper published an internal e-mail in which he expresses dismay over the nation's looming inability to launch its own astronauts.

In the e-mail, obtained by the Orlando Sentinel and published on Sunday, September 7th, Griffin criticized the White House science policy and budget offices for actions that threaten to leave NASA unable to staff the international space station after the shuttle's retirement.

The initial launchings of NASA's new Orion capsule and Ares I rocket, the shuttle's successor, on missions to the space station are not planned until early 2015. The space agency, with White House support, is counting on the purchase of Russian Soyuz rockets to transport NASA astronauts to the space station between 2010 and 2015. The purchases require the approval of Congress, where support waned after Russia's military invaded neighboring Georgia. If approval fails to get a congressional go ahead participation by the United States in the International Space Station could come top a halt.

The bottom line: No matter what the outcome, the decision on the future of the space shuttle is bound to impact on the overall manned ham radio space program and on-orbit amateur radio operations from the ISS. (Published reports)

CHANGING OF THE GUARD: GEORGE PUTNAM DIES AT AGE 94

He wasn't a radio amateur but for decades his on-the-air persona defined what the public perceived as a professional broadcast newsman. And now George Putnam, who anchored radio for three quarters of a century and top rated television news shows in Los Angeles for over 25 years, has died at age 94. Amateur Radio Newsline's Jim Davis, W2JKD, takes a look at the man and his record setting tour behind the mic and in front of the camera:

--

George Putnam began his 74 year long broadcast career in 1934 at WDGY radio in Minneapolis. In 1951 he moved to Los Angeles. Soon afterward he left radio for television and began hosting highly rated newscasts at stations KTTV, KTLA, KCOP and KHJ. And over the years he worked as a newsman, reporter, and commentator for most of the first generation United States broadcast organizations including NBC, ABC, Mutual, Dumont, and Metromedia.

For his contribution to the television industry, he received a star on the Hollywood Walk of Fame. George Putnam was also recently honored by the Los Angeles City Council and the county Board of Supervisors for his lifetime of service to the city.

After retiring from television in 1975, George Putnam returned to radio and created his famous syndicated "Talk Back" program. He did his last regular radio program this past May 8th. In a June 12th e-mail to his Newsmax.com readers, Putnam let it be known that he was in the hospital undergoing medical treatment on his liver and kidneys. Even so, he was able to take part in a special on-air celebration of his 94th birthday in mid-July.

According to CRN Digital Talk Radio, actor Ted Knight patterned his character of news anchor Ted Baxter on "The Mary Tyler Moore Show" after George Putnam. And for many years, George Putnam rode in the January 1st Tournament of Roses Parade from 1951 until 2000.

--

George Putnam died early Friday, September 12th at his 20-acre working ranch in Chino, California. Over the years he was friends with some members of the Amateur Radio Newsline staff. He will be missed. (From various published reports)

**

HAM RADIO IN SPACE: BLUSAT COULD LAUNCH WITHIN THE NEXT 18 MONTHS

Australia's University of New South Wales BLUEsat amateur radio satellite project could be ready for launch in as early as 18 months.

Weighing around 12 kilograms the solar-powered low earth orbit satellite will carry a flight computer with transmissions to include a beacon and amateur packet radio using the AX25 protocol in a J-mode configuration.

BLUEsat is believed the only university satellite project with an entire volunteer team. There are no full-time members or direct academic supervision. However the project has involved about 100 students since it began back in 1997. (WIA)

**

WORLDBEAT - INDONESIA: AMSAT INDONESIA ANNOUNCED

Indonesia now has its own amateur radio satellite organization. Hakim Satar YBZ0AN, contacted AMSAT-NA President Rick Hambly, W2GPS, with the announcement that AMSAT-Indonesia has formed. More about the new Indonesian AMSAT organization at www.amsat-id.net. (AMSAT)

**

WORLDBEAT - IRELAND: BEQUEST LEADS TO NEW HAM RADIO BOOK

The Irish Radio Transmitters Society has received a grant from the estate of the late Frank Lewis W3JGM. The organization says that it will use the funds to produce an introductory book on amateur radio, written in a popular non-academic format suitable for an Irish readership.
.
The Irish Radio Transmitters Society says that W3JGM was a great friend to many hams in Ireland. As such the society believes that such a would be a fitting tribute to Lewis who loved amateur radio and Ireland.

The Irish Radio Transmitters Society adds that it is in the process of selecting a suitable author to write the test. It hopes that it will wind up in schools and libraries all across Ireland. (IRTS News)

**

WORLDBEAT - BELGIUM: A HAMFEST IN BRULLELS

And while rather short notice, if you happen to be listening in Europe the Belgian Amateur Radio and Computer Rally was slated to take place on Sunday, September 28th. The venue was to be the Hall La Louviere Expo which is about 50 kilometers south of Brussels. Details are on the world-woide-web at www.on6ll.be. (Southgate)

**

ON THE AIR: CELECRATING THE NAVAL BATTLE OF PREYEZE

Members of the Turkish Special Wireless Activity Team are active as TC 470 PDZ through September 30th This, to celebrate the 470th anniversary the naval victory during the Battle of Preveze.

The naval Battle of Preveza took place on September 28th in the year 1538 near Preveza off the shore of northwestern Greece. It was a balttle that pitted an Ottoman Empire fleet against that of a Christian alliance. At the

end of the day, the Ottoman had sunk 10 ships, burned 3 others, captured 36, and had taken about 3000 prisoners.

Now, some 470 year later, the historic event is being commemorated by hams in Turkey. If you are able to make contact with TC 470 PDZ, please QSL via TA1HZ. (Southgate)

**

DX

In D-X, 3B8FQ has announced that he is planning to activate St. Brandon Island as 3B7FQ in October. The dates of the operation have not been determined. More information as it is available.

RW4WM, will be active as 3V8SS from Sousse, Tunisia from September 29th ato October 8th. Activity will be on CW and SSB, with some RTTY. QSL via RW4WM, direct or by the bureau.

DJ9XB will be active from Crete as J49XB between now and October 4th. He will probably operate in the CQ World Wide RTTY Contest on September 27th and 28th. QSL via his home callsign.

LA9SN, will once again be active as JX9SN from Jan Mayen for only a few hours on October 8th. Listen out for him on CW on 30 and 20 meters. QSL direct to LA9SN.

Lastly, A35RK has told the Ohio Penn D-X Newsletter that he will be active from American Samoa as KH8 slash KK6H, from AH8LG home Q-T-H. Operation will be from December 5th to the 9th on CW and SSB. QSL via W7TSQ or electronically via Logbook to the World.

(Above from various DX news sources)

**

THAT FINAL ITEM: TWO YOUNG DXERS HEADED TO WILLIS ISLAND

And finally this week, a a follow up to our story a few weeks ago about the upcoming Willis Island DXpedition looking for a pair of young DX'ers to join the party. Now comes word that two young hams have been selected.

The lucky young hams who are about to embard on the ham radio trip of a lifetime are Josh Fischer, W4WJF from North Carolina. He will join the group for the first part of its operation.

Fischer will later be replaced by Rhy Louw, ZS6DXB, from the Republic of South Africa. Louw will also be on hand to close out the Willis Island operation.

The Willis Island DXpedition is one of the most anticipated in years. If all goes as expected, the operation is slated to be on the air from October 9th to the 27th. (Willis Island Team Announcement)

**

NEWSCAST CLOSE

919. How to PSK? What do all those funny letters mean?

Newsgroup: rec.radio.amateur.moderated
Date: 2008-09-26 15:49:02 UTC
From: KC4UAI <kc4uai@gmail.com>
Message-ID: <60adbcc3-c4eb-4541-bf2c-6a0bbc3c2057@25g2000hsx.googlegroups.com>
Source record: 2490

I need a bit of help...

I'm pretty new to this PSK thing. I got to admit that I think it is a very interesting way to have a QSO and that I've enjoyed the handful of contacts that I've managed to have so far. I've learned a lot about PSK and radio in general as I fumbled around trying to get set up and on the air.

Which leads me to where I need help. I've run into a number of "first timers" on the air and we all share the same set of questions about the digital modes, the software, the hardware setup and the syntax of a QSO. I'm fairly proficient at using Google, but I can tell you that there are a lot of details that are hard to find when you are setting all this up for the first time.

Is there a good resource that explains the following:
1. The hardware required to link your radio to the computer sound card
2. The software choices you have
3. How to setup the radio to get a clean signal out, and how to know it's right.
4. How to make a QSO (What do all the letters mean???)
a) How to answer somebody or call CQ
b) How to end a transmission so they know you are done
c) What does 599 mean and how do I formulate the RST reports
d) How to end the QSO

I'm already though #3 and I've learned a lot of the QSO syntax by just doing it and watching other QSO's, but surely somebody has already compiled all this information someplace. Where might that be?

I'm also looking for information about how to harness my PSK software to drive my logging software so I don't have to keep manually entering all the log data. What software is out there that does this, and where can I find it?

-= Bob =-

==> MONTANA HAM ASSISTS IN RESCUE OF FELLOW AMATEUR 600 MILES AWAY

On Sunday, September 21, Bob Williams, N7ODM, of Bozeman, Montana, was
just tuning around on 40 meters, giving his rig a test just before a
scheduled QSO with his brother Rich, K7URU, in Spokane, when he heard a
faint CW signal around 1 PM (MDT): Glenn Russell Ruby Jr, W7AU, of
Corvallis, Oregon had broken his leg and was using a portable radio and
Morse code to send out a call for help. Williams said he was able to
understand the injured man's code even when his signal became very weak.

"He called me. He must have heard me testing out the radio. When I
finished, I signed off with my call, and then I heard, 'N7ODM, this is
```

W7AU/7,' so I answered," Williams told the ARRL. "I told him to go ahead, I had solid copy. He told me that he was a hiker that had fallen and broken his leg. He identified himself as Russ, provided information as to his GPS coordinates, the shelter, food and water on hand, as well as his detailed physical condition. He told me exactly who I needed to contact for assistance."

According to Williams, Ruby had slipped on a wet rock and broken his leg while out hiking in the Buck Creek Pass area of the high Cascades in Western Washington, 600 miles away from Williams. "Russ really had his act together," Williams said. "Before he even called for help, he set up his tent. It was raining when he fell, so he climbed into his tent and got into some warm clothes and had a snack of sunflower seeds and dried apricots. After that, he strung up a wire antenna, fired up his Elecraft K1 and called me." Williams said that Ruby told him he had a "couple of weeks worth of battery power" for the radio.

Ruby asked Williams to notify the Snohomish County Search and Rescue in Washington State. "I didn't have their number, so I called my local 911 dispatcher. All they had was the info for King County in Washington, so I called them and they gave me the number for Snohomish. When I got a hold of Snohomish County Search and Rescue, they asked me to obtain additional info from Russ, such as the color of his tent and if he was in a clear or wooded area, and remain in contact with him as long as possible," Williams said.

"Russ and I were able to maintain contact until about 8 PM on Sunday, during which time I was able to pass additional traffic between Russ and Search and Rescue, but then his signal got so weak where I couldn't copy it anymore. Before he faded, we had agreed to try and make contact in the morning. I tried, starting around 6:30, but he never heard me. I finally heard him calling me around 9 on 7.051 MHz. We kept in contact until he was evacuated from the site by Search and Rescue at about 10:35 AM," Williams told the ARRL.

On Sunday, rescue crews reached Ruby, who had set up camp on Buck Creek Pass, at about 6000 feet just west of the Chelan County line. He was taken to safety Monday on horseback. Williams said that bad weather Sunday prevented a helicopter rescue: "It was snowing all night; Russ told me that when he woke up Monday morning, his tent was all covered in snow."

"I just happened to be at the same frequency," Williams said. "It's just a stroke of luck that turned out great. It was quite an experience. I'm just glad that he was a ham radio operator and that I was able to talk to him. It made the difference for him. What I did was not anything special. I'd like to think that any ham in Montana would've done the same thing."

==> SIMULATED EMERGENCY TESTS SCHEDULED FOR OCTOBER 4-5

When emergency or natural disaster strikes, Amateur Radio is often called into the limelight of public service to establish a line of communication to and from the stricken areas. Amateur Radio networks, once established, sustain communication during the emergency efforts by helping the disaster relief workers and public with point-to-point communications or health and welfare messages. During weather related threats or during the actual occurrence of severe weather, Amateur Radio networks are commonly on standby to gather information and report this data to the National Weather Service or other pertinent authorities.

You've read about and/or have heard about these important stages of Amateur Radio public service in QST or on the Web or elsewhere. Make this the year that you take a role to learn more and become ready to serve in public service and emergency communications.

The ARRL sponsors a nationwide trial for Amateur Radio operators for a role in the Amateur Radio Emergency Service, the Radio Amateur Civil Emergency Service, the National Traffic System, the National Weather Service's SKYWARN, the Salvation Army Team Emergency Radio Network (SATERN) or other groups as well. It's the ARRL's annual Simulated Emergency Test (SET), and you're invited to join on October 4-5, 2008, or whenever it is held in your area.

To participate in this year's emergency test, contact your local ARRL Emergency Coordinator or Net Manager to find out the details. Although October 4-5 is the focal point weekend, ARRL Sections, ARES teams and nets may conduct their exercises anytime during September through December. If you don't know who to call, please touch base with your ARRL Section Manager for assistance (see page 16 in any QST for contact information or consult the ARRL Web page <http://www.arrl.org/sections>). Whether you're a new licensee or an experienced radio amateur, the SET is a golden opportunity to learn or practice useful skills in traffic handling, net operation and emergency communications protocols and management.

ARRL Section Leaders and local or District Emergency Coordinators are encouraged to work closely with served agencies in planning these exercises. This not only helps to heighten awareness of Amateur Radio in the community, but also helps ensure that effective communication networks will be in place if an actual emergency occurs. ARRL maintains National Memoranda of Understanding with several organizations and entities, and the SET is a prime chance to put these agreements into action. More details may be found here <http://www.arrl.org/FandES/field/mou/>.

You are encouraged to consider this year's ARRL Simulated Emergency Test and all preparations, as well as post-exercise evaluations, as a demonstration of your readiness and Amateur Radio's readiness. Be an active participant in SET, and join others nationwide. Additional background on the annual SET is presented in the article, 2007 Simulated Emergency Test Results. See July 2008 QST, pages 62-65. Also, guidelines and specific SET reporting forms for the ARRL Section and Field Leaders will be posted on the ARRLWeb site

<http://www.arrl.org/FandES/field/forms>.

==> RICHARD GARRIOTT, W5KWQ, FOLLOWS DAD OWEN, W5LFL, INTO SPACE

Richard Garriott, W5KWQ, a well-known programmer and designer in the video game world, will soon be a household name to those who follow space flights. He's the next private citizen to be flown to the International Space Station (ISS) by the Russian Federal Space Agency (RKA), and is taking ham radio into space just as his dad Owen Garriott, W5LFL -- the first ham to make QSOs from space -- did in 1983.

Richard's fiery ride to space will be on a Russian Soyuz TMA-13, due to be launched on Sunday, October 12; the Soyuz is set to dock with the ISS two days later. According to ARRL Amateur Radio on the International Space Station (ARISS) <http://www.rac.ca/ariss/oindex.htm> Program Manager and ARISS International Secretary-Treasurer Rosalie White, K1STO, Richard is the sixth private citizen to be accepted by the Russian Space Agency for a short-term mission on the ISS. HIs term as an official crew member of the Soyuz TMA-13/17S crew is scheduled to end with the undocking of the Soyuz on October 22 for its journey back to Earth.

Twenty-five years after his father made that first QSO from space, Richard is bent on honoring him by operating ham radio in space. Frank Bauer, KA3HDO, ARISS International Chairman, said, "The ARISS Team is very happy to be able to make Richard's time in space extra special, since his flight coincides almost exactly 25 years from when his father made history."

The first thing Richard did after passing his Technician exam was to start talking to ARISS in earnest. "ARISS coordinates and sponsors everything to do with ham radio in space, and NASA Mission Control will be handling all of the ham radio schedules," White said. In mid-August, ARISS Team Member Kenneth Ransom, N5VHO, set up a training session at NASA Johnson Space Center for Richard. Following that, Richard completed his Russian radio training. ARISS Team Member Sergej Samburov, RV3DR, trained Richard on SSTV, packet, the use of the ARISS equipment, and the onboard computers in Star City, Russia at the Gagarin Cosmonaut Training Centre. The next month, Samburov had Richard learn how to handle radio ops, especially pile-ups.

School QSOs are nothing new for ARISS, so what exciting new thing is Richard planning while he spends his time in space? White said he plans on transmitting a show of downlink video images. "Beforehand, SSTV testing will be conducted between him and the ARISS Team, uplinking high resolution images," she said. "The SSTV downlinks will take place during his official Earth observations duties, allowing students and hams to compare images to ones previously downloaded. He may have the SSTV equipment running at random times for the pleasure of ham radio operators. He will use his call sign -- W5KWQ -- on the downlinked video pictures while operating the RS0ISS and NA1SS equipment, with permission from station trustees Frank Bauer, KA3HDO, and Sergej Samburov, RV3DR.

According to ARISS International Chairman Frank Bauer, KA3HDO, Richard plans to take a Kenwood VC-H1 SSTV communicator with him on board the Soyuz for his flight and leave it on the ISS for future ARISS use. "The VC-H1 has completed all hardware certification on the US and Russian sides," Bauer said. "The final test, an EMI radiated emissions test, was performed last week and the test data was delivered to Sergey Samburov, RV3DR, in Russia this week. The VC-H1 provides a very simple interface for ISS crew members and does not require the use of a computer. Computer usage has been a real challenge for ARISS, so the VC-H1 represents a lesson learned to improve ARISS operations."

Richard is the sixth private citizen to be flown by the Russian space agency to the ISS; all other private citizens who have ventured to the ISS before him have also made ARISS QSOs. NASA, the Russian Space Agency, RSC Energia, Space Adventures Ltd and ARISS have developed various agreements to allow space citizens to entice students to science and engineering through ARISS QSOs. For more information about Richard, his space activities and what he hopes to accomplish in space, visit his Web site <http://www.richardinspace.com/>.

==> FCC ASSIGNS CONTESTED VANITY CALL TO WISCONSIN AMATEUR RADIO CLUB

In an "Order on Reconsideration and Order Proposing Modification" released on Wednesday, September 24, the FCC decided that Falls Amateur Radio Club (FARC) was the rightful recipient of call sign W9CQ. FARC and the QRQ CW and Contest Group (QRQ) had both claimed they were entitled to use the call <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-08-2138A1.pdf>.

In 2007, the Commission was notified that Paul Kent, to whose amateur station call sign W9CQ was then assigned, had died on January 1, 2006. Therefore, the call sign was due to become available for reassignment through the vanity call sign system on January 2, 2008. On April 3, 2007, Robert C. Moldenhauer filed an application requesting W9CQ as a vanity call sign, stating that he was eligible for the call sign prior to the expiration of the two-year waiting period because he was an in-law of Paul Kent; the application was granted on April 21, 2007. On August 3, 2007, Moldenhauer filed another application requesting modification of his amateur station call sign to, among other call signs, W9IS. This application was granted on August 21, 2007, resulting in his license for call sign W9CQ to be surrendered and canceled. On November 1, 2007, after inquiry by the Commission's Enforcement Bureau, Moldenhauer reported that he had surrendered call sign W9CQ after realizing that he was related to a different Paul Kent and therefore was not eligible for the call sign prior to the end of the two-year waiting period.

On January 2, 2008, FARC filed an application requesting to modify its Amateur Radio station license to W9CQ. The Commission dismissed the application on the grounds that the call sign was not available, because it was less than two years since it had been surrendered by Moldenhauer. On January 23, 2008, FARC filed a petition for reconsideration of the dismissal, arguing that the call sign should have been made available to

the vanity call sign system on January 2, 2008 because Moldenhauer was not eligible for the call sign prior to the expiration of the two-year waiting period. Additionally, FARC requested that call sign W9CQ be assigned to its station license since it was the only applicant that requested call sign W9CQ on that date.

On May 23, 2008, QRQ submitted an application to modify its amateur radio station license to show the call sign W9CQ. The application submitted to the FCC stated that QRQ was acting with the written consent of a nephew of Paul Kent. This application was granted on June 10, 2008.

The Commission, in their decision, stated that they agreed with FARC that call sign W9CQ should have been made available to the vanity call sign system on January 2, 2008, as Moldenhauer was not eligible for the intervening grant of the call sign: "As specifically provided in public notices setting forth the procedures of the vanity call sign system, 'Where a vanity call sign for which the most recent recipient was ineligible is surrendered, canceled, revoked or voided, the two year requirement does not apply.'" The FCC also found that since FARC was the only applicant for that call sign on January 2, 2008, the call sign should have been assigned to FARC's amateur station.

The FCC did not see how, at this time, they could set aside QRQ's application for W9CQ, saying that grant is a "final action," but went on to say that "Section 316(a)(1) of the Communications Act of 1934, as amended, provides the appropriate vehicle to correct this error." This section permits the Commission to modify a station license "if the action will promote the public interest, convenience, and necessity."

The FCC proposed to modify QRQ's Amateur Radio station license "to show the call sign KC9MWH, which was the call sign assigned to QRQ's amateur station prior to the grant of its application. The proposed modification would serve the public interest by ensuring that the procedures of the vanity call sign system are followed." The FCC stated that upon the modification of QRQ's license, they would then be able to assign call sign W9CQ to FARC "pursuant to its application."

The FCC ordered that the petition filed by FARC is granted "to the extent indicated" in the Order and their application is returned to pending status. It was further ordered that "it is proposed that the license of QRQ be modified" by returning the previous call sign of KC9MWH.

In its decision, the Commission said that in accordance with Section 97.27(b) of the Commission's Rules, they will not issue a modification order until QRQ has received notice of the proposed action "and has had an opportunity to file a protest. To protest the modification, QRQ must, within thirty days of the release date of this 'Order on Reconsideration and Order Proposing Modification,' submit a written statement with sufficient evidence to show that the modification would not be in the public interest. The protest must be filed with the Office of the Secretary, Federal Communications Commission." The FCC further stated

that if no protest is filed, "QRQ will have waived its right to protest the modification and will be deemed to have consented to the modification."

==> ARRL TO PARTICIPATE IN THE COMBINED FEDERAL CAMPAIGN

For the seventh year running, the US Office of Personnel Management has designated the ARRL to participate in the 2008 Combined Federal Campaign (CFC) <http://www.opm.gov/cfc/>. In the past, this campaign for federal government civilian employees, US Postal Service workers and members of the military has generated more than $120,000 for ARRL programs; in 2008 alone, ARRL has received $37,475 in pledges from CFC participants and direct contributions of $21,316.

The CFC provides an easy way to support ARRL's effort to represent its members and all radio amateurs. Similar to the United Way, the CFC encourages individuals to pledge by payroll deduction to non-profit organizations of their choice. The ARRL encourages eligible radio amateurs to consider the League when designating campaign recipients. Payroll deduction through the CFC is an easy way for participants to support ARRL over and above their annual membership. Such contributions support programs that are not funded by member dues, enriching ARRL's ability to serve its members and all of Amateur Radio.

Those wishing to select the ARRL to receive all or part of their payroll deductions should designate organization 10099 when completing their CFC donor forms. Donations to ARRL can be designated for Diamond Club contributions, the ARRL Spectrum Defense Fund or the ARRL Education & Technology Program. Donors may also make unrestricted contributions to the League.

One important note: Since the CFC does not provide the ARRL with the names of individual donors, the ARRL Development Office <k1mmh@arrl.org> would appreciate a copy of the donor form to ensure that each contribution is applied according to the donor's wishes and the contribution or pledge can be properly acknowledged. The 2008 CFC ends December 15.

==> WALT IRELAND, WB7CSL, RETIRES FROM ARRL

Technical Relations Specialist Walt Ireland, WB7CSL, part of the ARRL's Technical Relations Office (TRO) in Washington, DC, retired from the League this past summer. Ireland came to ARRL in April 1997 from the Voice of America (VOA) where he was responsible for building HF radio broadcasting stations. While at the TRO, he participated in the preparation cycles for three World Radiocommunication Conferences (WRC) - 2000, 2003 and 2007 -- and served as vice chair of the FCC Informal Working Groups that dealt with US proposals for HF broadcasting and amateur requirements.

At the request of the FCC and with the approval of then-ARRL Chief Technology Officer Paul Rinaldo, W4RI, Ireland accepted the Chairmanship of US Working Party-6E (which dealt with HF broadcasting) in 1997; he

held this position until WRC-07 after which all US Working Party chairs were assigned to government employees. As Chairman of US Working Party-6E, he headed all of the US delegations to meetings at the International Telecommunication Union (ITU) in Geneva, Switzerland. While there, Ireland often chaired ITU-R Drafting Groups.

Ireland was selected to be Vice Chair of Informal Working Groups of the FCC's WRC Advisory Committees (WAC) in preparation for WRCs-03 and 07. He was also selected by the US Department of State to attend WRC-07 as a Technical Advisor.

Several of the major ITU-R issues Ireland participated in were the protection of 7 MHz from HF broadcasters, protection of the 70 cm band from European and NASA Synthetic Aperture Radars, Broadband over Power Lines (BPL) and Ultra-Wide Band (UWB) transmissions.

Ireland served as the chief instructor for ARRL Amateur Radio Administration Course for Regulators (ARAC), sponsored by the United States Telecommunications Training Institute (USTTI) for the past several years. He now resides in Nevada.

==> IARU AWARD CERTIFICATES GET NEW LOOK

On September 19, the ARRL Awards Branch unveiled a new design for two IARU award certificates: the Worked All Continents Award (WAC) and the 5 Band Worked All Continents Award (5BWAC) <http://www.arrl.org/awards/wac/>. WAC is awarded to amateurs who have confirmed contacts on any band with Africa, Asia, Europe, South America, North America and Oceania, while 5BWAC recognizes hams who have made confirmed contacts with those continents on 10, 15, 20, 40 and 80 meters.

The WAC/5BWAC rules state that all contacts must be made from the same country or separate territory within the same continental area of the world. Contacts made on 10/18/24 MHz or via satellites are void for the 5-band certificate and 6-band endorsement. All contacts for the QRP endorsement must be made on or after January 1, 1985 while running a maximum power of 5 W output or 10 W input. US amateurs must be ARRL members to receive these awards; foreign amateurs must be members of their IARU Member-Society and should apply through their Member-Society.

According to ARRL DXCC Manager Bill Moore, NC1L, the WAC award -- originally announced in the April 1926 issue of QST -- continues to be a popular award around the world with more than 6000 participants since its inception. "Besides the certificate design change, the WAC certificate will also display the award holder's name alongside their call sign. We do this already on the 5BWAC certificate."

Moore said there are a couple of ways that hams interested in applying for WAC or 5BWAC can do so. "They can download the form from the WAC Web site <http://www.iaru.org/wac/wac.pdf> and send it via regular mail (along with QSL cards and payment) to ARRL, or DXCC recipients can send an e-mail <wac@arrl.org>, referring to their DXCC award. We can look

into your account to verify the contacts; just include your payment information in your message," he said.

WAC is currently not supported in ARRL's Logbook of The World (LoTW), but Moore said that an upgrade to do so is currently in the planning stages. Any comments or questions regarding the WAC or 5BWAC program should be referred to the WAC Desk <wac@arrl.org>.

==>SOLAR UPDATE

Tad "From the Sun that 'round me roll'd in its autumn tint of gold" Cook, K7RA, this week reports: This week saw the appearance of another sunspot -- a new Solar Cycle 24 spot -- larger and lasting a little longer than last week's Solar Cycle 23 sunspot. It appeared for two days, September 22 and 23, with sunspot numbers of 18 and 16. Geomagnetic activity is very quiet; on September 25, the K index was 0 for a good part of the day. This was true for the mid-latitude index, planetary and the college K index in Alaska. The three corresponding A indices for the day were 4, 1 and 1, respectively. This is especially nice for the lower part of the HF spectrum, such as our 160 and 80 meter bands, and something we don't see during periods of higher sunspot activity. Geophysical Institute Prague predicts quiet conditions September 26-29, unsettled September 30, active October 1 and unsettled conditions on October 2. Sunspot numbers for September 18-24 were 0, 0, 0, 0, 18 16 and 0 with a mean of 4.9. The 10.7 cm flux was 67.2, 67.9, 67.8, 67.9, 69.1, 69.4 and 68.4 with a mean of 68.2. The Estimated planetary A indices were 9, 5, 3, 2, 4, 3 and 4 with a mean of 4.3, and the estimated mid-latitude A indices were 5, 3, 1, 1, 2, 2 and 1 with a mean of 2.1. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Edgar Allen Poe's "Alone" <http://www.doctorhugo.org/synaesthesia/poe.html>.

==>IN BRIEF:

* This Week on the Radio: This week is the NCCC Sprint on September 26 and the AGCW VHF/UHF Contest on September 27. Look for the CQ Worldwide DX Contest (RTTY), the Texas QSO Party and the Scandinavian Activity Contest (SSB) on September 27-28. The UBA ON Contest (CW) is September 28 and the 222 MHz Fall Sprint is September 30 (local time). The RSGB 21/28 MHz Contest is October 1. Next week is the German Telegraphy Contest on October 3. The YLRL Anniversary Party (CW) is October 3-5. The EU Autumn Sprint (SSB), the TARA PSK Rumble Contest and the NCCC Sprint are October 4. The Oceania DX Contest (Phone), the International HELL-Contest and the California QSO Party are October 4-5. The UBA ON Contest (6 meters) is October 5, the 432 MHz Fall Sprint is October 8 (local time) and the RSGB 80 Meter Club Sprint (CW) is October 9. All

dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday October 5, 2008 for these online course sessions beginning on Friday October 17, 2008: Amateur Radio Emergency Communications Level 2 (EC-002); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* New Section Managers Get Ready to Converge on Newington: The 16th annual New Section Manager Workshop October 10-12 will give 14 newly elected or appointed Section Managers a chance not only to visit ARRL Headquarters for the first time, but also to gain some perspective on their new leadership positions. During the weekend gathering, participants will not only meet many HQ staffers, but learn some of the ins and outs of how to become effective Section leaders and administrators. According to Steve Ewald, WV1X, Supervisor of the ARRL Field and Public Service Team, the Section Manager Workshop is an orientation and training event for new Section Managers who have come on board within the past year. "The primary purposes of the Workshop sessions are to share ideas and to provide basic administrative, management, leadership and motivational training. We also cover the responsibilities and functions of the Section Manager's position, and the SMs are able to visit with ARRL Headquarters staff members and learn more about the many programs that ARRL supports. The Workshop sessions are presented by several ARRL Headquarter staff members who are experts in their respective areas," Ewald said.

* DX Engineering Acquires Comtek Systems: On September 24, DX Engineering <http://www.dxengineering.com/> announced it had acquired North Carolina-based Comtek Systems <http://www.comteksystems.com/>. Comtek's manufacturing and customer service operations will move to DX

Engineering's Akron, Ohio facility. "Comtek's products are highly regarded among Amateur Radio operators," said DX Engineering president Paul Sergi, NO8D. "The addition of these products to our popular line of antennas enhances our ability to supply complete, high quality, directional antenna systems. It's a win-win for DX Engineering and Comtek Systems customers." James Miller, K4SQR, principal of Comtek Systems concurred: "DX Engineering will continue the tradition of top quality products and customer satisfaction that we have provided for years. DX Engineering and Comtek Systems have complementary product lines and the synergy created by combining the two companies will bring many benefits to the Amateur Radio fraternity."

* North American Missions Board Stands Down after Gustav, Ike: On Wednesday, September 24, the hams with the Southern Baptist Disaster Relief <http://www.namb.net/site/c.9qKILUOzEpH/b.224451/>, a program sponsored by the North American Missions Board, NA4MB <http://www.namb.net/>, stood down after assisting with Hurricanes Gustav and Ike. The group had been helping providing backup communications options in areas that were isolated since August 31. NAMB National Communications Coordinator Terry Jones, W4TL, said that in his opinion, "The thing that worked best in areas that did not have good Internet and cell phone coverage were Winlink Airmail on both the amateur and the MARS side. This medium worked flawlessly and Airmail messages were transmitted via HF radio when voice communications were not possible due to extremely poor propagation. EchoLink worked very well, as did D-STAR. We were able to communicate directly with units in Texas through the D-STAR Gateway via the KI4SBA repeater in Cumming, Georgia. Satellite Internet service also worked well for those that have this technology. What did not work well at all were voice communications from the affected area to NA4MB due to very poor HF propagation." Southern Baptist Disaster Relief -- based in Alpharetta Georgia -- is a partnership ministry of the state Baptist conventions and the North American Mission Board, Southern Baptist Convention. It has at its disposal approximately 1500 mobile units, including feeding, chainsaw, mud-out, command, communication, child care, shower, laundry, water purification, repair/rebuild and generators.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

A whole lot of digital mode operations are adapted from CW. Bear in mind though, a lot of it is out of lazy typing rather than good operating practice. It is always best to be clear. Use English properly and simply to avoid confusion. For contest operation it is usually specific to the contest.

The interface technology is similar for most of the sound card type modes. You need to understand attenuators and impedance transformation theory but there are particulars for individual models of radio.

Rig control is different and usually involves a serial interface rather than audio interface, but again is specific to adapt to the radio. The change to USB ports is a complication. Rf energy in the shack brings other problems into the mix.

Google is your friend. There are volumes on the various subjects. There is usually a learning curve because of the specific needs of your particular station. My setup is a bit crude but ever evolving. I have found transformer coupling with proper attenuation to deal with impedance matching and common mode interference issues. I keep threatening to build it all into a small box complete with automatic audio source selection with level control, RX out buffered to different outputs and data switching. Look into MFJ and RigBlaster for store bought solutions that are highly adaptable to a variety of rigs and situations.

> I'm also looking for information about how to harness my PSK software
> to drive my logging software so I don't have to keep manually entering
> all the log data. What software is out there that does this, and
> where can I find it?

Look at logging programs that fetch the band, frequency and maybe mode from the rig control port. All you need to do is paste the callsign in from PSK. I bought LogEQF quite a while ago and like the readability and speed of it, but it's kind of a personal thing depending on how you set up the other stuff too.

I like to make timestamp macros in the whatever Digi software, so that the timestamp will be put into the QSO as a redundancy and all gets saved to cache.

922. September 2008 ARS License Numbers

Newsgroup: rec.radio.amateur.moderated
Date: 2008-09-26 22:05:30 UTC
From: N2EY@aol.com
Message-ID: <0be375a7-2ce3-4e9a-b0a3-0947d64e4959@d70g2000hsc.googlegroups.com>
Source record: 2493

These are the number of current, unexpired FCC-issued amateur radio licenses held by individuals on the stated dates, and the percentage of the total number of active licenses that class contains. Percentages may not add up to exactly 100.0% due to rounding.

These totals do not include licenses that have expired but are in the two-year grace period, nor do they include club, military and other station-only licenses.

Effective April 15, 2000, FCC no longer issued new Novice, Technician Plus and Advanced class licenses, so the numbers of those license classes have declined steadily since then.
Also since April 15, 2000, FCC has renewed all existing Technician Plus licenses as Technician. It is therefore informative to consider the totals of the two classes, since the Technician class includes a significant number of Technician Plus licenses renewed as Technician. Due the renewing of Technician Pluses as Technicians, the number of Novices now exceeds the number of Technician Pluses.

On February 23, 2007, the last Morse Code test element, the 5 wpm receiving test, was
eliminated as a requirement.

The ARS License Numbers:

As of May 14, 2000:

Novice - 49,329 (7.3%)
Technician - 205,394 (30.4%)
Technician Plus - 128,860 (19.1%)
General - 112,677 (16.7%)
Advanced - 99,782 (14.8%)
Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total all classes - 674,792

As of February 22, 2007:

Novice - 22,896 (3.5%)
Technician - 293,508 (44.8%)
Technician Plus - 30,818 (4.7%)
General - 130,138 (19.9%)
Advanced - 69,050 (10.5%)
Extra - 108,270 (16.5%)

Total Tech/TechPlus - 324,326 (49.5%)

Total all classes - 654,680

As of September 23, 2008:

Novice - 18,748 (2.8%)
Technician - 307,813 (46.6%)
Technician Plus - 12,480 (1.9%)
General - 143,815 (21.8%)
Advanced - 62,619 (9.5%)
Extra - 114,860 (17.4%)

Total Tech/TechPlus - 320,293 (48.5%)

Total all classes - 660,335

Changes:

>From May 14, 2000, to February 22, 2007:

Novice - decrease of 26,433
Technician - increase of 88,114
Technician Plus - decrease of 98,042
General - increase of 17,461
Advanced - decrease of 30,732
Extra - increase of 29,520

Total Tech/TechPlus - decrease of 9,928

Total all classes - decrease of 20,112

>From May 14, 2000, to September 23, 2008:

Novice - decrease of 30,581
Technician - increase of 102,419
Technician Plus - decrease of 116,380
General - increase of 31,138
Advanced - decrease of 37,163
Extra - increase of 36,110

Total Tech/TechPlus - decrease of 13,961

Total all classes - decrease of 14,457

>From February 22, 2007, to September 23, 2008:

Novice - decrease of 4,148
Technician - increase of 14,305
Technician Plus - decrease of 18,338
General - increase of 13,677
Advanced - decrease of 6,431
Extra - increase of 6,590

Total Tech/TechPlus - decrease of 4,033

Total all classes - increase of 5,655

Most of the better PSK software includes logging as part of that software.
Then you can export the information in the ADIF format and import that file
to your general log.

```
-----BEGIN PGP SIGNED MESSAGE-----
Hash: SHA1

I'm pleased to discover that a D-Star repeater has been set up on 2
meters here in Omaha, Nebraska: KD0CGR/R, 145.175(-). This effort is
being led and coordinated by the Omaha Digital Communications Group,
which holds the repeaters's club callsign:

http://www.omahadigital.org/d-star-repeater/

http://www.omahadigital.org/

http://www.qrz.com/callsign/KD0CGR

This is apparently a coordinated assignment on a vacant frequency pair,
which is a fortunate circumstance from living here in the rural midwestern
U.S.

Gatewaying to Lincoln, 55 miles to the west, to the W0MAO
repeater/gateway, is being supported on a "semi-permanent" basis:

http://www.146760.net/news.php?readmore=20

Looks like minimum equipment buy-in (for a handheld) would be about
$400-$450 for an Icom IC-91AD. That's a bit stiff, but is probably
in-line with what many on this newgroup paid for their first dual-band
HT (and that was in more expensive dollars at the time).

The Omaha Digital Communications Group plans to expand to 1.2 GHz
shortly.

Omaha analog repeater activity for many years now has been mostly in
support of severe weather nets and volunteer weather spotters under the
SKYWARN program. Time will tell how well this new technology can be
integrated into such nets, and other public service communications.

> all this up for the first time.

I hear ya! Lots of times we don't have enough background to go on.

One good tool however is in the programs themselves. Many of them have "macros" that you hit a function key and it sends a pre-made bit of text to the transmitter. That is a pretty good place to look for the conventions. and most of us on PSK31 are not as big sticklers for those conventions, so making a "mistake" won't be all that embarrassing.

> Is there a good resource that explains the following:
> 1. The hardware required to link your radio to the computer sound card

This one isn't too bad to google.

http://www.geocities.com/n2uhc/interface.html

http://www.w7ji.com/psk.html

has a nice little interfaces.

I suppose the caddilac interface would be one using optoisolators. The interface I built is similar to the second one on the Geocities page. I use isolation transformers for both the audio transmit and recieve, and a potentiometer to trim the audio level.

> 2. The software choices you have

My favorites are DM780, (see description below) Digipan, and for quirky value - Zakanaka. There are others, but these three are free.

Google on those names. for the downloads.

> 3. How to setup the radio to get a clean signal out, and how to know
> it's right.

Just as a rundown, on PSK, it is best to have all the audio TX levels as low as possible, consistent with putting a signal on the air. Most important is to keep the ALC from engaging. This often limits your power output, but you shouldn't be using too much output on PSK31 anyhow. It's a narrow BW mode, and any flaws in a signal will make problems for other OPs, especially at higher powers. My rule of thumb is 25-30 watts, but never higher than 50 watts.

> 4. How to make a QSO (What do all the letters mean???)

What you need to do is a google search on Q-Signals. There will be a lot of them, not all are applicable any more.

> a) How to answer somebody or call CQ

It's largely a matter of personal preference. Some call CQ twice, some three times. A few do a whole slew of CQ's, which is not needed for PSK, since we can see a person on the waterfall as soon as they start transmitting and tune them in a very short time. Those extended CQ's are for modes where the sending OP is found manually.

But is CQ From (or "de") <your callsign> . You then repeat. Then listen. Give the other Ops a chance to reply. I've seen a few Ops who space their CQ's so cloe that by the time I've answered them, they are in the middle of calling CQ again.

To answer a call, I usually give their callsign twice, then mine twice. After establishing a QSO, it is just once.

> b) How to end a transmission so they know you are done

During the call

Back to you - BTU <their call> de <your call>

Ending the call

73's <their call> de <your call> SK.

> c) What does 599 mean and how do I formulate the RST reports
> d) How to end the QSO

This is an interesting one. Strictly speaking 599 doesn't apply to PSK. It means something like signal strength, readability, and tone. That, plus a lot of users just give everyone a 599, no matter what their signal is. I read somewhere about a alternative numerical exchange for digital users, I'll try to find it again.

> I'm already though #3 and I've learned a lot of the QSO syntax by just
> doing it and watching other QSO's, but surely somebody has already
> compiled all this information someplace. Where might that be?

I smile when I read this because one of the big troubles I had when learning live copy Morse code was that most CW ops use a lot of abbreviations. I was copying words that didn't make any sense to me - and I assumed I was wrong. Wasn't until after a good bit of copying that I figured it out.

Most PSK'ers use a lot more plain English than say CW operators do. Some things such as CQ, 73's and SK are fairly common, and are a nice connection to our roots, but PSK is not like repeaters, where the repeater owner has complete say so about how others speak when they use it.

> I'm also looking for information about how to harness my PSK software
> to drive my logging software so I don't have to keep manually entering
> all the log data. What software is out there that does this, and
> where can I find it?

I would recommend Digital Master-780, which is part of the Ham Radio Deluxe suite. This program does a lot of things for you, as well as the basic program:

Rig control - This is very nice, as many items that might be a menus item on the radio are now a mouse click on teh computer display.

Multiple modes - DM780 does PSK in it's many flavors, RTTY, Feld-Hell Olivia, CW, and many more.

mouse over a callsign, and it tells you the country, and if th estation is in the log yet. right click, and it places the call sign in the log window, and looks up the station info via an internet call sign server.

It has plenty of macros, which are easily modifiable.

When you sign with the other op, it enters the QSO in the logbook. Then it will upload the log to Eqsl.cc. Lots more features too.

Best of all, It is free, as well as being probably the best program of it's type.

You may mean QSA 1-5 -- readability - with QSA 5 being a "solid"
contact. I've started using that system - it makes more sense. If
there is a problem with the "cleanliness" of the signal, tell to Op in
words what you are observing.

When I learned Morse in the Dark Ages, I learned that ending signal as
VA - which is exactly the same thing. I always associate SK with
"Silent Key" - an operator who has passed away. My ending macro says
"K2ASP Clear" - remnants of my Public Safety radio dispatch days.

Bill
Apply a megaohmmeter to test for any breakdown in the dialectic between the center conductor and the shield and between the shield and ground. A test voltage of 500 would be the highest I would go and I think three hundred would tell you all there is to know about the integrity of the insulation. You already know that the condition of the copper is essentially unchanged.

936. Need advice on HDTV antenna

Newsgroup: rec.radio.amateur.moderated
Date: 2008-09-30 01:57:20 UTC
From: Bill Horne <bill@horneQRM.net>
Message-ID: <wOydnS7nmYZg2nzVnZ2dnUVZ_oHinZ2d@speakeasy.net>
Source record: 2407

OK, the cutover to HDTV is coming up, and I want to have a good antenna on the roof long before February, so I'm in need of advice. I'm using a converter box to feed my current TV set, but rabbit ears don't work well at all.

I know I need a rooftop antenna, but the available commercial literature is more hype than help. I'm hoping that someone out there has expertise on the new antennas being offered for HDTV.

I know this depends a lot on what the signal strengths are at my QTH, but assuming that all-other-things-are-equal:

* Are flat-panel units worth the price?
* Can I get by with an old VHF-UHF combination antenna?
* What's the tradeoff between feedline length and antenna gain?
* Do masthead preamps perform well, and is the cost and maintenance worth it?

What market are you in, and how far are you from the local towers?

I would suggest you can get away with an old combination antenna if it's
still in decent shape. You may want to think about replacing the
feedline, it ages less gracefully than the antenna...

My personal experience has been that masthead preamps are pretty reliable
.
However, I'd be slow to use one unless you're in a fringe area. They ca
n
easily overload and make reception *worse*.

.... and on whether the channels in your area are all going to be on
UHF, or whether there are some which will still be on VHF high-band,
or even one or more on VHF low-band.

>but assuming that all-other-things-are-equal:
>
>* Are flat-panel units worth the price?

As to price I can't say (although there's an open-source design or two
floating around which can be home-fabricated).

Flat-panel designs (bowtie-and-reflector, usually, I think) are
probably decent solutions for UHF-only areas. I don't expect that
their performance on VHF is terribly good, unless they're very large.

>* Can I get by with an old VHF-UHF combination antenna?

If you've got a decent ghost-free picture on NTSC with a combo
antenna, chances are probably fairly good that it'll work well enough
for ATSC digital.

If all of your ATSC stations are going to be UHF, you might get better
results with a multi-bay UHF-only antenna... the combo antennas don't
always have a very clean pattern (good front-to-back ratio)

>* What's the tradeoff between feedline length and antenna gain?

Well, a longer feedline leads to greater losses, and if your signal is
already at the lower limit of what's acceptable then you'll need to
make up the lack somehow else... higher antenna gain, or a preamp, or
increasing the signal "seen" by the antenna.

There's a definite tradeoff between feedline length and antenna
height - raising the antenna will increase the feedline length (and
losses), but may give the antenna a better "view" of the transmitter
antenna and thus a stronger/cleaner signal.

If you're a good distance from the transmitter (more than a few
miles), raising the antenna is often a very good tradeoff...

if you don't, the transmitter antenna may be below the horizon (from your antenna's point of view) and you'll be depended on diffracted signal rather than line-of-sight signal. An extra 10' of antenna height may increase the signal into the antenna by quite a bit more than the amount you'll lose in 10' of feedline.

>* Do masthead preamps perform well,

A lot of cheaper preamp designs are prone to overload if there's a strong signal nearby (e.g. fire, police, ham radio), and this is Ungood. Some are prone to instability - they can start oscillating without warning - and this is Really Ungood.

> and is the cost and maintenance
>worth it?

That depends very much on your situation.

If many of the stations you're receiving are quite distant, and if you need a long feedline, and if you've already got a good antenna, and if you buy a high-quality masthead preamp which is resistant to strong-signal overload, and if there are no nearby strong-signal transmitters, then such a preamp may well be worthwhile.

I tend to think that preamps are a decent way to compensate for losses in the feedline. Unless they're quite good, though (low noise figure and high overload resistance) they're not a good substitute for getting enough of a clean signal *into* the antenna - positioning the antenna better/higher, and using an antenna with more directional gain are better bets. Remember, a masthead preamp will amplify ambient RF noise, and multipath reflections just as much as it'll amplify the desired input signal!

> * Can I get by with an old VHF-UHF combination antenna?

My advice would be to try it and see. You'll know right away, as digital reception tends to be pretty much "all or nothing". I had no problem with my existing antenna when converting to the new signals.

If it ain't broke, don't fix it.

If it is broke, then do a little research to determine what frequencies you're interested in (VHF, UHF, or both) and how far you are from the transmitting locations. There are web sites that will help with that. Given that information, you'll be in a better position to figure out what you need.

Inverted V is more like a vertical. If you have a metal mast, it might BE a
vertical. If you can raise the ends It might work better.

Shorter antenna means narrower bandwidth. You will probably need a tuner
even with a full size vertical on 80m.

I used an inverted L with loading on the 9' vertical section. It had a 25'
horizontal section and worked well for short to medium skip on 80 and 40m.

I now have an HF9v Butternut. Royal pain to tune. Works well for longer
skip, worthless for short skip. Has good bandwidth on all bands 6-40m but
needs a tuner for most of 80 as the 2:1 bandwidth is about 20 kHz. The
inverted L came down because it detuned the vertical too much on all bands.
I wish I had both.

Buried coax is prone to moisture unless the conduit was able to drain and
has air space. If you think it may have had moisture in it, replace it. I
like to replace at 10 years maximum because of contamination from the
chemicals in the dialectric.

A reasonably accurate electronic Hygrothermograph with alarm functions
can be purchased for about one hundred dollars ($100).

> 3. What can I do to prevent water damage?
Install a flooding alarm that will sense the presence of water in the
lowest point of the basement. Build or buy an autodialer that will page
you through your cell phone if the flooding alarm goes off. If you have
a home burglar and / or Fire alarm system that function can be added to
the system but before having that done be sure you know how much it will
add to the monthly monitoring fee if any.

> Are there automatic water cut-off valves? How do they work?
>
The only ones I've seen are excess flow valves and they only close on a
complete rupture of the piping such as might occur following an
earthquake or explosion. It is possible to set up a flow timer that
would cut off the flow of water using a solenoid operated valve if the
water flow continued for too long a period. That can be wired with a
pre-alert to warn you that the flow will be cut off to give you time to
reset the timer if you are, say, filling the pool or a hot tub. You can
also add water flow supervision to your home alarm system so as to
notify you of any water flow when you are not home. The sensor is
installed after the tap for any automatic watering systems. If you have
a sump pump it can be supervised; either by a home alarm system or a
stand alone device and you can be notified if the water in the sump
rises above the cut in level of it's float switch or if the pump is
running continuously. You can also install a venturi eductor; which is
sometimes called a jet pump; that would pump water using the pressure
and flow from the public water system if your power is out and the water
in the sump rises above the sump pumps cut in level. Since your battery
backed up alarm system or unit would already be complaining about the
high water level and the loss of AC power that would buy you the time to

do something about it by returning home and starting a generator for instance.
> 73,
>
> Bill W1AC
>
WHAT FOLLOWS IS MORE THEN MOST WILL WANT TO KNOW ABOUT ALARM SYSTEMS BUT IS WORTH READING IF YOU ARE CONSIDERING ADDING AN ALARM SYSTEM OR ADDITIONAL FUNCTIONS TO AN EXISTING SYSTEM.

Most of this you can build into your alarm system or house monitoring system yourself if you own the system. If the system is under a monitoring contract and it is owned by the monitoring company then you would want to have these functions tied into the supervision of external systems circuit so that you don't get hit with monthly fees for each function monitored. You should only be paying for monitoring four types of signals unless YOU want to pay to have individual functions separately monitored. Be warned that the individual monitoring costs can add up to a very steep bill. The four signals are Trouble, which means the alarm system itself is in need of servicing*; Supervision, which means that a building protective system is operating or in need of servicing; fire, & burglary. Some folks choose to add manual panic alarms for home invasion or robbery but that is often an additional monthly charge on your central station monitoring contract. Most of what you want to know can be signaled directly to your cell phone without any monthly fee by adding off the shelf components to an alarm system you own. Such systems are known as proprietary alarm systems because they are monitored by the Owner / Proprietor or her/his agent. Systems monitored under contract are called Central Station Alarm Systems. Systems that only alarm locally are called, not surprisingly, Local Alarm Systems. Systems that notify a public agency or private service that is not in the alarm monitoring business are called Remote Alarm Systems. Municipalities and local governments of all stripes do not like remote alarm systems because they are too often mistaken alarms. In most states it is now a crime to program an auto-dialing voice message system to call 911 or any other public safety telephone number including non emergency numbers. Local governments want you, or someone you pay to do so, to do the heavy lifting of determining that an actual emergency really does exist. They want a human being to call to tell them what is going on and to take responsibility for the authenticity of the alarm signal. Auto-dialers that relay trouble or supervisory signals are simply ignored by public safety agencies except for the preparation of a citation for violation of the State's alarm system regulatory laws.
--
Tom Horne

"This alternating current stuff is just a fad. It is much too dangerous for general use." Thomas Alva Edison

*This should be included at no additional cost to you if the system is owned by the alarm servicing company or by the Central Station that monitors it. Central Stations are often owned and operated by the company that installed the system.

Most such systems that can be readily moved around are called ground power units and are designed to service airplanes. Most of them are one offs that were built to serve a particular type of airplane. These are sometimes available to local government through the state surplus office. You could adapt any mobile generator to provide some heat but mobile and portable heating units are commercially available. The adaptations need to be done very carefully so as not to pump exhaust gases into the structure. A duct wye fitting is connected to the cooling air exhaust of the engine alternator unit; read generator; and the remote thermostat changes the damper to dump the heat right there or into flexible ducting that will carry the heat to the space were it is wanted. Such units will heat a larger area if they have both supply and return ducts and dampers. The system can be built from off the shelf parts and only attached to the "generator" when the heat is needed. The condition of the engine becomes a significant factor in the occupants comfort. If the engine is leaking lubricant or coolant then the oder of the heated liquids will quickly become unbearable.

I have not used a vertical on 80 meters, so I cannot answer questions 3 and 4. However, I do have some opinions:

Whether a vertical is better than an inverted-V depends upon what you want to accomplish. If you want maximum DX, then the main radiation lobe of your antenna should be at a low angle re. the ground. A vertical antenna has a low angle. A horizontal antenna (an inverted-V is mainly horizontal) must be up about one wavelength (80 meters, 271 feet) to get a low-angle radiation lobe.

But, if you want to contact stations in your state or region (in your case, New England and neighboring states), you want the radiated energy to go nearly vertical, so that it bounces off the ionosphere and returns nearby. A horizontal antenna mounted low does this. I live in the desert southwest near Las Vegas where we have no tall trees to tie antennas to. I have a half-wave 80-meter dipole mounted about 25 feet (0.09 wavelength at 80 meters) high. It gives me nearly-vertical radiation. I have good coverage of Nevada, southern California and Arizona. But no DX. However, I don't chase DX; I'm content to chat locally.

Local interference from lightning, power lines and most other non-intentional sources is vertically polarized, so a horizontal or inverted-V would pick up less of this type of noise. Distant interference from any source would be reflected by the ionosphere and be of random polarization.

This is a sort of follow-up to my post on 80 meter verticals, but in reading AC7EL's reply, I realized I may be (excuse the expression) barking up the wrong tree.

I am content with ragchewing to locals on 80, but I also want to have a reliable path to my brother's QTH, so the question is really "How do I choose the best band for QSO's from Boston to Washington, D.C."?

Now, obviously, this is a complex topic, but I'm looking for other hams who've set up similar paths: about 450 miles, IIRC. It's just outside the range I'd expect from a "NVIS" dipole on 80, but might be short for 40. If you've dealt with similar path lengths, please chime in.

TIA.

952. Use of ground wires underneath dipoles

Newsgroup: rec.radio.amateur.moderated
Date: 2008-09-30 22:39:02 UTC
From: Bill Horne <bill@horneQRM.net>
Message-ID: <UPOdnVprccnVDn_VnZ2dnUVZ_i2dnZ2d@speakeasy.net>
Source record: 2423

According to Wikipedia
(http://en.wikipedia.org/wiki/Near_Vertical_Incidence_Skywave), a
horizontally-polarized NVIS antenna will benefit from a ground wire
underneath it.

Here's an excerpt:

"An NVIS antenna configuration is a horizontally polarized (parallel
with the surface of the earth) radiating element that is from 1/20th
wavelength ... to 1/8th wavelength above the ground. That proximity to
the ground forces the majority of the radiation to go straight up.
Overall efficiency of the antenna can be increased by placing a ground
wire slightly longer than the antenna parallel to and directly
underneath the antenna. While the ground wire is not necessary under
good to excellent propagation conditions, antenna gain in the 3 dB to
6 dB range are common when the ground wire is used."

Since I've never heard of anyone doing this, or seen any hams trying it,
I'd like to hear from those who've done it, and find out if the gain is
as predicted.

I have a chain-link fence along my property line. Maybe I can move my antenna over to the property line and use the fence as ground wire.

>73,
>

Well, there is some similarity with the end of a contact and the end of
a mortal life, so perhaps that is why the double meaning of SK

But whether you spell it SK or VA, the derivation of the signal is from
American Morse, where it is "30" ...-. for 3 and a looooong dash for
zero. And "30" is the abbreviation you still see now and then in
published matter, where it means "the end"

If you want a real value you will have to do a four pole fall of potential measurement using a Ground Resistance Tester. That is the only way to get a real value that will hold up to later scrutiny of the antennas you have modeled.

Switching power supplies are notorious RFI generators; sometimes
they'll be clean for years and then go bad, some are bad out of the
box.

They're usually designed so they shut down when there's no load
applied, which would explain why you don't experience any interference
when it's not connected to your PC.

You could try the standard trick of adding chokes to the AC and DC
lines to the supply, but when I've had a PS go bad, I've never had any
luck removing the noise.

Other than that, the only other solution I've found is replacement.

I was having an eyeball qso with another ham last night, and he
mentioned using 33cm (902-928 MHz). I made the mistake of admitting that
I didn't know we had an allocation between 70 cm and 23 cm.

Since I don't like not knowing these things, I'll ask some questions:

* When was 33cm allocated to hams?
* What commercial equipment is available?
* What homebrew designs are available?
* Where is activity centered?
* What modes are most common on the band?

TIA.

959. Bugcatcher antenna problem

Newsgroup: rec.radio.amateur.moderated
Date: 2008-10-01 17:05:53 UTC
From: Michael Coslo <mjc5@psu.edu>
Message-ID: <gc05h6$1cb0$1@f04n12.cac.psu.edu>
Source record: 2430

I'm reinstalling my reworked Bugcatcher on my vehicle, and the road oil and dirt, and general tarnish have made the bugcatcher coil taps a little difficult to solder to.

The main coil is 6 inches in diameter, around a foot in length, and is on a plexiglas form.

I've tried a couple things. Sandpaper was a no go, as it will wear the wires down. Steel wool works okay, but you can't get it on the inside of the form. I'd rather have a "dip n' clean" sort of thing if such exists.

I have even considered a acid bath, followed by a long rinse, but this is electronics, so all my training yells no. still......

Anyone know of a dip that will clean tarnished and dirty solder, and not be too corrosive?

We used a configuration of that principal, for years, when doing
communications for the Ididarod DogSled Races out in the bush
of Alaska. Put up a Dipole for 80 Meters, strung between the trees,
and then ran a Grounded Wire, directly under the Dipole, that was 3%
longer, electrically. Increased our ERP for Short Range Comms.
Typical Ranges were from 120-500 Miles. KL7BB can give you any details,
you could require, if you can track Crazy Bill down......

What puzzles me is the ground: I don't understand why such a wire would
function as anything but, well, ground. I understand that it's a
parasitic reflector if not grounded (has anyone tried this?), but I
don't get the reason for the ground.

BTW, is it grounded at both ends?

I think it's really about ground (dirt) conductivity. Which varies all over the place.

In some places (moist, loamy soil with lots of minerals, coastal areas where the water table is very high and salty) the dirt is a pretty good conductor, to the point where antennas "worked against ground" do pretty well with just a ground rod or two. RF just bounces off that sort of dirt.

In other places (dry, sandy, rocky soil) the dirt is a very lossy counductor, and acts more as an RF absorber.

With a low dipole, the ground is so close that it has major effects on the antenna. If it's lossy dirt, it just soaks up RF, but if it's a decent conductor, it can act as a reflector. The added wire is just a way of improving the ground conductivity in the dirt that is most involved: the dirt directly under the antenna.

970. Hard Times and Ham Radio

Newsgroup: rec.radio.amateur.moderated
Date: 2008-10-02 13:30:20 UTC
From: N2EY@aol.com
Message-ID: <8a12d558-5385-4af5-a8b4-c66f67dbae74@79g2000hsk.googlegroups.com>
Source record: 2441

I've been following the various political debates this election year, and the whole $700 billion bailout mess. How it happened, how to fix it, who is to blame, etc. From all that, it seems to me that we're looking at some pretty lean economic times ahead.

But this isn't really a post about politics or economics. It's about their effect on ham radio, specifically, growth in our numbers. Looking back of the history of US ham radio, it seems to me that the worst economic times were the best for US ham radio growth.

Consider that:

In the 1920s, the number of licensed US hams grew very slowly, if at all, despite the new technologies of tubes and short waves. By 1929 there were only about 18,000 licensed US amateurs, not much more than in 1920. The Roaring '20s radio boom was in broadcasting, whose development has many parallels to that of the internet in the '90s and '00s.

Then in 1929 came two major changes for US hams. First were the "1929 regulations" that greatly narrowed the US ham bands and required much cleaner signals than before. A lot of existing transmitters had to be extensively modified if not completely rebuilt to meet the new rules, and hams on bands like 40 and 20 were crowded into much less spectrum than before. (In those days the ham bands were far fewer than today, and simply getting a transmitter to work well on one band was a challenge). For example, 40 was reduced in width from 1000 kHz to 300, 20 was reduced from 2000 kHz to 400.

Later in 1929 the stock market crashed and the Great Depression began. Hard times lasted all through the 1930s. There was also the Dust Bowl that displaced large numbers of Americans from their farms. (May we never see such hard times again!)

Yet from 1929 to 1937 the number of licensed US hams almost tripled. In percentage terms it was the time of the greatest growth US amateur radio has ever seen.

As prosperity began to return in the late 1930s, the growth slowed down. WW2 shut down US amateur radio for the first half of the 1940s. When the war ended, there was rapid growth despite all the disruption of the war, plus rising prices and shortages in the postwar economy as wage and price controls were removed. Of course a big part of that growth was from people who had put off becoming hams during the war, and later from the restructuring of 1951 that created the Novice license. But in the five years from VJ Day to the beginning of 1951,

the number of US hams almost doubled, passing 100,000 in the process.

The 1960s were good economic times, yet through that decade US amateur radio growth was almost nil, similar to the 1920s. The radio boom in the 1960s was in cb, not amateur radio.

Then in 1968 the new "incentive licensing" regulations came into effect, and in the 1970s problems of inflation, high interest rates, unemployment, energy crises and lack of economic growth hit the US economy very hard. Just look at gasoline prices - less than a quarter a gallon for cheap gas in 1969, a dollar and a half ten years later. It wasn't until the mid-1980s that things really stabilized.

Yet all through the 1970s and into the 1980s the number of US hams grew steadily, from about 270,000 in 1969 to about twice that number in the mid-1980s.

Since the early 1990s until today, we've had (at best) slow growth in the number of US hams, and (at worst) a decline, even though the price of a ham rig in inflation-adjusted dollars has decreased greatly and the licenses are far easier to earn. The boom in these years has been in "wireless" (an old term reused!) rather than amateur radio.

The only exception to the pattern of hard times = ham radio growth I can find is the 1950s, which were economic good times (at least the later 1950s). In that decade the growth of the late 1940s continued steadily, so that by the early 1960s there were about 250,000 licensed US hams. Besides the then-new Novice license, the 1950s were a time when there was lots of WW2 surplus radio gear available at bargain prices. It was also the heyday of inexpensive but decent quality kit rigs from Heath, Johnson, Eico and others. The highest sunspot peak in recorded history happened in 1958, and the Cold War caused a lot of interest in civil defense communications by hams.

Perhaps the connection is that, in hard economic times, people's recreation shifts away from going out, traveling, and making big purchases, and changes to things they can do hunkered down at home for a little money and a lot of ingenuity. Certainly most of the ham stations of the 1930s fit that description. While new ham gear and a big station are expensive, a small homebrew or used-equipment station with a simple antenna can provide very good results if used with skill, patience and there are decent conditions.

What do others think? Could we be in for another time of growth for US ham radio? The Dow is down, house prices are down, credit is tight and taxes are just about guaranteed to rise. But sunspots are on the way....

I think you are talking about CW instead of PSK.

We've pared down the prosigns quite a bit for PSK mode. I think it is
mostly a legacy thing, as plain english works okay too. I don't think
I've ever seen prosigns such as BK or KN used for PSK.

Pretty much SK, K CQ (well that really isn't a prosign of course) - and
the good old 73 and 88. Some use 73's and 88's. Technically wrong, but I
don't want to lecture a person who is wishing me well.

Good excuse to get rid of the rabbit ears. Go to an outside antenna for more signal, and to get away from the various noises from appliances in the house.

It may be from the power pack, then you could substitute another and see, but most likely from the charging circuit in the computer that uses a ramp voltage and is radiated from the frame of the computer. This shows up as lines of dots. What happens if you pull the battery when using it? If it is diagonal bars, it may be from a clock in the computer. Either way you are probably screwed.

973. Newsgroup servers?

Newsgroup: rec.radio.amateur.moderated

Can anyone recommend a free newsgroup server? Comcast just sent out an email that they are discontinuing newsgroup access effective October 25th.

Get a shell account at Panix.com. They have a very good news server.

$100. a year, includes email. www.panix.com

You can do email and news by logging into your shell account and using
unix tools or remotely with NNTP and IMAP access.

Google will give you an ample list of free news servers.

Many people in other newsgroups faced with the same
situation are going over to news.individual.net which is
actually run by the Free University in Berlin (not that the
location makes any difference on the worldwide network).

It costs 10 Euros per year which amounts to slightly more
than 1 USD per month. They run a good operation and I
have not heard any complaints about it. I have them auto
charge my plastic every year and I don't even have to
think about it. Highly recommended.

Hi Bill,

Keep in mind that an antenna height that is NVIS on 80 meters, won't necessarily be so on 40 meters. A backyard dipole should do nicely from Boston to Washington. I regularly have QSO's from The middle of PA to all over New England on 40 meters, and get some impressive results on both ends, So the path is there.

Now on to your band question.

One of the side benefits of doing a State QSO Party is I can see what bands tend to go where.

And this info is not cast in stone - it is just general.

80 meters is pretty local during the day. Around 200 miles is max. At night, it extends a lot further. 160 is similar, only worse for locality. And of course it's quite a job getting a good antenna up for it. 160 meters would not be a good choice for comms between you and your brother, and 80 would probably be a little marginal during the daytime

40 meters daytime is usually pretty dependable from local to 500 some miles. It does some times "go long". When that happens, fairly local signals, around a hundred miles or so away, will fade away, while several hundred out will come in great. In the evening, 40 goes worldwide. When the Broadcast stations finally get out of the Ham section of 40 meters, it will be a golden age for us. At present, you'll still be able to reach your desired distance, you'll just have to find a clear space.

40 is a pretty good choice.

20 meters tends to have an interesting skip path. From Central PA, I get out Gangbusters to Florida, and the mid and far west. Not so good a hundred miles away. Some times it stays open late in the evening, sometimes it closes early

Higher in frequency is more of the same, only exaggerated. 15 Meters tends to close earlier, etc.

If it were me, I would set up a dipole so that it would fire in the desired direction, and have the other party do the same. 40 meters would be the band.

I've purposely not gone too much into propagation models, as I think they can get a bit unwieldy.

> I'm experimenting with antennas, and I'm going to model some on my
> computer, but I need to know the ground conductivity at my QTH.
>
> How may I measure this without special-purpose instruments?

From an ARRL Handbook

You drive 4 rods into the ground 18 inches apart in a straight line.

You have a 100 watt bulb in series with a resistor that goes to the near rod, the other side of the bulb goes to one half of a 120 volt line. The other side of the 120 volt line goes to the farthest rod.

If the bulb lights brightly, then rejoice! You have great ground.

Here is the more detailed link

http://amfone.net/ECSound/K1JJ12.htm

Needless to say, you're operating with some voltage here, so care is the watchword. Keep in mind that conductivity is constantly changing, so the best we can hope for is a rough idea anyhow.

Now a simpler way to do all this, and much less dangerous, is to use maps like the one at:

http://www.fcc.gov/mb/audio/m3/index.html

Ah yes, the venerable M3 map. It is only an approximation, and for
real-life stuff it isn't used any more, supplanted by real ground
conductivity measurements.

Here's the URL for the web page: http://www.comcast.net/newsgroups/

Maybe they haven't gotten to the letter K in sending out the notice or maybe
they are doing it by service areas.

I'll check out the one you suggest. I tried google but everything listed
seemed to have a charge attached to it.

It needs to be very cheap or free as I'm unemployed at this time.

Since you're posting through Panix, Comcast's actions won't
affect you anyway, Phil. Same with me. I don't recall whether
I got a notice from them or read about it in some of my habitual
Usenet groups a couple of weeks ago, but I knew it didn't affect
me anyway, because I only use my Comcast cable modem to access
my *real* ISP. :-)

Try http://www.open-news-network.org/ You may have to run it through
Google's Translator site to get it to where you can read it properly, but
they are the only ones I know offering free USENET access.

Good Luck.

Or, for USENET access only, consider news.individual.net - ten euros
per year.

The site "aioe.org" has a publicly-accessible USENET server - free to
use, and posting is allowed. Unfortunately, The Tragedy of the
Commons applies here - because the server is free, open, and (by
deliberate intent) doesn't authenticate its users, it has become a
server-of-choice for abusive posters and (I think) spammers, and quite
a lot of sites and individuals are now just dropping all aioe.org
articles on the floor.

Can you afford $10/month? Thats the basic rate at Panix, if you pay a
year at a time, you get a $20 discount.

I agree. My HF antenna is 3 dipoles, one each for 75, 40 and 20, suspended vertically with one foot spacing and fed with a common feed point. The top dipole is for 75, and the ends are about 25 feet high and the center droops to about 22 feet. Each dipole works independently (with mild interaction) because the desired dipole has a 50-ish impedance, and the other two have high impedances at the current operating frequency. I can operate on 75,40 and 20 with only my transceiver's built-in tuner (2.0 SWR max). I can also operate on 15 (third harmonic of 40) with an external tuner.

On 75, I have NVIS. On 40, I can talk a half a continent away. On 20, I can talk world-wide.

Forte offers Agent Premium Newsgroups (APN).
http://www.forteinc.com/apn/index.php
It's basically a front-end to Easynews.

12 GBytes $2.95 / month
25 GBytes $5.95 / month
70 GBytes $9.95 / month
Unlimited $14.95 / month

I don't download many binaries, so I'm happy with the 12 GBytes level.

I don't buy it.

1. Human beings are resourceful
2. Junk is always plentiful, as is used gear.
3. Some people don't get on the air without ready-made station solutions
3. A segment of the population is always on hard times
4. A segment of the population is always wealthy beyond their need
5. No shortage of things for people to do with their down time.

I find it hard to draw any conclusion from any publicized event without considering the many variables that have a far greater impact. It is just too hard to link such things together to establish some kind of domino effect. Certainly the loss of a house AND car AND ability to charge batteries would put a ham off the air, but short of that, would more people be on the air, or watching TV, or doing job searches, or buying surplus parts and equipment on ebay while unemployed? Certainly the market in gear is down to the point that you can get a used full-featured rig for much less than a weeks pay, so there is little reason to sell a radio to pay the rent. More likely to sell the radio to make room, or because the wife put her foot down. I would look instead to other causes and effects more closely related to why people were or were not, participating in ham radio rather than trying to draw a line from some universal situation to overall numbers. This is the stuff of conspiracy theorists.

One thing I noticed from the 70's to present, was the Exodus of Aerospace jobs from this area. When work was plentiful for those prone to be hams, and lots of surplus/cheap building materials were available, there were a whole lot of hams around because there were a whole lot of people interested and employed in electronic technology. Many were hams because they knew hams, but had a variety of other techno- hobbies as well. Hams were even preferred as employees, because it was an indication of ingenuity that would often rub off on the job. During that time, I was a ham, working for hams, and it led to an incredible advantage due to the cohesiveness of the team and from pooling of knowledge and experience. After this era, I began to find that more hams were into some specific aspect of radio operations rather than technology. I suspect the normal number of dedicated radio operators were always there, but at one point, there were also a great deal of electronics experimenters who had a greater variety of interests. These days, parts supplies have virtually dried up, and even radio shack hardly has enough stock to do more than install a car stereo. What swap meets continue have turned mostly to computer surplus.

Also, it is interesting to note that the choice of the word "Bailout" is a poor choice of words to work with. It implies throwing money on a problem by large cash giveaway. It could just as well be a hostile takeover by the government by exploitation of a perceived crisis. Since the government isn't about to go out of business, it can impart stability by assuming risks

and securing assets that will eventually recover for a great profit to the government, so this could actually offset or reduce taxes to the public over a 5 year period. There must be sufficient safeguards in place though. We really don't want to go communist, because without private sector ingenuity, risk and free competition, stagnation and shortages invariably follow.

Well, maybe, particularly after WW2.

But note that after WW1 there was no great rise in the number of US hams, yet the Depression years and the 1970s saw amateur population explosions. (Indeed, the post-WW2 times were an actual population explosion now known as the baby boom...). Veterans who learned radio in the military during WW2 or Korea may have contributed to amateur growth, of course, but the post-WW2 growth went on for many years after those conflicts ended. More importantly, a lot of it was people too young to have served in the military when first licensed as amateurs.

> Another item could be the availability of surplus military gear or a
> technology shift that made it easier for people to get into amateur ra
dio.

Certainly a factor, as mentioned in my original post. In the 1930s, there was "surplus" in the form of inventory from failed radio manufacturers, while surplus from WW2 was still inexpensive and widely available 30+ years after the war ended. But the growth of the 1970s wasn't fueled by surplus radio gear, IMHO.

It would seem that technology shifts would work against growth, because the new stuff would cost more and not be available used or surplus. It is possible that one major reason for the lack of growth in the 1960s was the popularity of SSB among hams, because SSB gear cost more and was generally more complex than AM. The 1970s-80s boom coincides with the rise of VHF-UHF FM and repeater use by hams, which started out with conversions of surplus land-mobile equipment and simple homebrew stuff.

> I'm sure hard times also has the effect you describe.

Correlation isn't necessarily causation, but where can you get more fun-per-dollar than ham radio?

Thanks Pat!

I'm old enough to remember the 1960s (became a ham in 1967 at the age
of 13). One thing I remember clearly from those times were the
prophets of doom who said amateur radio would disappear in a few
years, because:

- cb was growing and ham radio wasn't
- ham gear of the time cost too much, was too complex, and couldn't be
worked on by hams anymore
- incentive licensing made it too hard to get a license
- the Conditional distance was upped to 175 miles
- the young people of the time were too busy being hippies to do
something as "square" as ham radio
- there were too many other distractions (TV, radio, cars, the space
program, etc.) to interest people in ham radio

Etc.

Yet none of that gloom-and-doom stuff came to pass. There are now more
than twice as many hams as there were in the early 1970s (just over
660,000 current unexpired licenses, last time I checked). Except for
the last 10 years or so, the US amateur population has grown a lot
faster than the US population as a whole.

1929 to 1969 was forty years. Both years marked the beginning of
growth times for US amateur radio. 1969 to 2009 is forty years too....

==> CANADIAN AND AMERICAN HAMS PROVIDE "TEXTBOOK EXAMPLE" OF AMATEUR RADIO'S EMCOMM ROLE

On Sunday, September 27, the VoIP Hurricane Net <http://www.voipwx.net/> formally activated at 5 PM EDT to provide surface reports as Hurricane Kyle affected portions of extreme Northeastern Maine, New Brunswick and Nova Scotia, Canada. The activation was in coordination with WX4NHC <http://www.wx4nhc.org/>, the Amateur Radio Station at the National Hurricane Center (NHC), to support their operations for Hurricane Kyle.

"The Canadian Maritimes rarely get hurricanes, but we received some of our highest quality reports that included measured wind data every 15-20 minutes, as well as damage reports from radio amateurs in the area. They did a fantastic job," said Director of Operations for the VoIP Hurricane Net Rob Macedo, KD1CY. "We reached out to many of the IRLP and EchoLink stations in this area and the response rate from those amateurs connecting to our Net was extremely high."

Assistant WX4NHC Coordinator Julio Ripoll, WD4R, agreed: "The Canadian amateurs provided critical surface reports to the National Hurricane Center that we wouldn't have received otherwise. I was very impressed with the level and detail of the reports we received." The National Hurricane Center in Miami works closely together with the Canadian Hurricane Centre <http://www.atl.ec.gc.ca/weather/hurricane/index_e.html> when tropical events impact this area of the world.

The storm downed trees and wires, prompting power outages over portions of Nova Scotia and New Brunswick, Canada. A measured wind gust to near 95 MPH was reported in Lockeport, Nova Scotia by a ham radio operator with a weather station within a couple hundred feet of the coast of the Atlantic Ocean.

ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, acted as Net Control for most of the Net's activation; Dura also serves as Assistant Director of the VoIP Hurricane Net Operations. "I, too, was extremely impressed with the level of support from the Canadian amateurs in providing situational awareness and disaster intelligence for Hurricane Kyle," he said. "The work these hams performed was a textbook example of the role Amateur Radio plays in events like this. Many lessons were re-learned tonight, lessons that need to be re-taught in areas impacted by tropical events."

On Saturday, prior to Kyle's arrival in the Canadian Maritimes, Dura began providing information to the Radio Amateurs of Canada (RAC) <http://www.rac.ca> through their ARES e-mail reflector. Sunday's information sharing was escalated with direct contact with RAC Vice President for Field Services Bob Cooke, VE3BDB. "This event provides an opportunity for cross border support, as it's certainly not every day that a tropical event is aimed at a Canadian Province without first hitting the States," Dura said. Cooke echoed this in his message to the RAC Section Emergency Coordinators, District Emergency Coordinators and local Emergency Coordinators, urging "every Radio Amateur to participate to the best of his or her ability."

Elsewhere in the tropics, Sub-Tropical Storm Laura has formed in the open Atlantic, but is currently only a threat to marine or shipping interests. Laura may briefly reach hurricane strength before weakening over the colder waters of the Northern Atlantic.

==> RADIO AMATEURS ASSIST WITH HURRICANE KYLE OPERATIONS

As Hurricane Kyle brushed its way across the Eastern New England region on its way to the Canadian Maritimes, hams in the area were prepared for impact. Heavy rain associated with a stalled out boundary, as well as some influence from Kyle, caused heavy rainfall and flooding in the region.

"We were lucky to have a 12-18 hour lull in rainfall between the rain on Friday and what came on Saturday," said Director of Operations for the VoIP Hurricane Net and SKYWARN <http://www.skywarn.org/> Coordinator Rob Macedo, KD1CY. "We were also lucky that most of the direct influence from Kyle remained offshore, or this situation would've been much worse." Over the 3 day period, 3 to 6 inches of rain fell over much of Eastern New England, Connecticut and parts of Central Massachusetts and Eastern New Hampshire. Some areas, Macedo said, received more than 8 inches, resulting in pockets of flooding with a few brooks going out of their banks.

The Amateur Radio station at the National Weather Service in Taunton, Massachusetts, WX1BOX, coordinated SKYWARN operations Friday afternoon through Sunday. According to Macedo, this station covers much of Southern New England. Farther north, the National Weather Service's office in Gray, Maine's station, WX1GYX, coordinated SKYWARN efforts in that area. Macedo said that amateurs at theses stations mostly received reports of rainfall amounts and flooding.

The Hurricane Watch Net (HWN) <http://www.hwn.org/> also provided reports to the National Hurricane Center (NHC) <http://www.nhc.noaa.gov/>. HWN Net Manager Dave Lefavour, W7GOX, said, "Propagation was tough. We think most hams in Kyle's path were making preparations for this rare Canadian hurricane, but we were able to pick up and relay some actual ground observations to the National Hurricane Center. The NHC is always looking for first-hand ground observations of weather conditions to help them understand what the storm is doing below radar and satellite visibility." The HWN relays information obtained on 14.325 MHz to hams at the National Hurricane Center operating WX4NHC.

District Emergency Coordinator for Maine District 3 Phil Roberts, K1PAR, activated ARES Nets in his region -- Knox, Waldo, Hancock and Washington Counties -- on Saturday night. All ARES members in the affected counties were on standby. In Southwestern Maine, all ARES members were also on standby for possible activation by their respective served agencies.

Maine Section Emergency Coordinator, Bryce Rumery, K1GAX, provided reports all day Sunday to ARRL Headquarters. On Sunday evening, Rumery advised all District Emergency Coordinators and local Emergency Coordinators to "stand down their ARES members no later than 0500 Monday morning or earlier if possible at the discretion of the DEC or EC."

According to e-mail reports, New Hampshire hams were also on alert throughout the day, Macedo said.

==> ANOTHER WORLD CHAMPIONSHIP MEDAL FOR ARDF TEAM USA

Ten years ago, only a few hams in North America knew that on-foot hidden transmitter hunting is an international sport with many names such as foxtailing, foxhunting, radio-orienteering and Amateur Radio Direction Finding (ARDF) <http://www.homingin.com/index.html>. Few were aware that Eastern European countries had begun playing with ARDF decades ago; the first World Championships were in 1980. In 1988, stateside ARDF active hams in Portland, Oregon and Southern California were learning the ARDF ropes by holding on-foot foxhunting events using international rules.

In the past 10 years, more hams in more places have discovered that this form of radiosport is great exercise for the body and the brain. According to ARRL ARDF Coordinator Joe Moell, K0OV, as the USA catches up with the rest of the world, the US's ARDF "big guns" continue to improve.

Earlier this month, the Korean Amateur Radio League <http://www.karl.or.kr/> hosted the ARDF World Championships <http://www.2008ardf.org/>, and for the sixth time, Team USA made the trip. Members of the American team ranged in age from 23 to 66, representing seven states. Team members earned their positions at the 2007 USA Championships near South Lake Tahoe, California as well as the 2008 USA Championships near Bastrop, Texas.

"Overall, this was Team USA's best performance ever," Moell said. "We had four Top 10 finishes in the two days of fox-finding competition, first with 2 meter AM signals, and then with 80 meter CW signals. ARRL's team faced more than 300 of the planet's best foxtailers that represented 24 other national Amateur Radio societies. "

George Neal, KF6YKN, of Maspeth, New York, led Team USA, capturing a bronze medal in the category for men between ages 50 and 59 in the 2 meter foxhunt. He found all four required transmitters and got to the finish line in 1:23:42, less than six minutes behind gold medalist Igor Kekin of Russia. The other Top 10 finishers -- all in the 80 meter event -- were Vadim Afonkin of Boston, who was 5th in M40 category; Bob Cooley KF6VSE, of Pleasanton, California, who was 7th in M60, and Nadia Scharlau of Cary, North Carolina, who was 9th in W35.

"This was an excellent World Championships," Neal said. "The courses were very hard, almost brutal!" Radio-orienteers are used to running among trees in forested land, using an orienteering map as a guide, but this year's 2 meter event on September 4 was quite different. According to Jay Hennigan, WB6RDV, of Goleta, California, the terrain of the 2400 acre site was unlike any he had ever experienced.

"The course was long and narrow, about three times as long as it was wide," Hennigan explained. "The start was in the north and the finish was in the south. On the map, it was about three-fifths woods, but that was all marked dark green, which meant you couldn't get through it unless you could find a pathway. Fortunately, there were a few trails in there to make it doable. The rest was marked yellow, which turned out to be cultivated fields and drained rice paddies. There were roads on either side, so it became a matter of running down the road until you

thought you were perpendicular to a transmitter, slogging to it through the mud, punching in and then running to one of the side roads, depending on where the next fox appeared to be. It wasn't just rice, there were other crops including some kind of cabbage. We couldn't avoid trampling the plants, but the farmers weren't yelling or coming after us."

The 80 meter event on September 6 was mostly in more familiar forested terrain. It was a bigger site and a 10 percent longer course. Competitors said that they felt like mountain goats because it seemed as if each fox was on top of a different hill.

Excellent radio-orienteers abound in Europe and Asia. Fourteen of the 25 nations at this year's World Championships took home one or more medals, but only five countries brought home gold. Three of them -- Russia, Ukraine and the Czech Republic -- dominated the medal count, capturing 71 percent of all medals and 92 percent of the golds. In these countries, ARDF is an important Amateur Radio activity in nearly every city and town. With so many hams doing radio-orienteering, these countries can fill complete team rosters with the maximum allowable three persons in each age category for males and females.

Having a large team does not provide a cooperative advantage. Each competitor must work independently on championship courses. Any collusion or collaboration among team members is strictly forbidden; team scores are based only on the sum of individual performances.

Long-time map-and-compass orienteer Bob Cooley, KF6VSE, of Pleasanton, California, explained, that "It is important to make a lot of mistakes while practicing and to learn from them so that you don't make them in the future. I got the opportunity to get fooled in a variety of ways."

For more information on ARDF, including international rules, suggestions for equipment and ideas for local events, go to Moell's Web site <http://www.homingin.com/index.html>. "I welcome your local event stories and photos for future ARDF Updates," he said.

==> ARRL/TAPR DIGITAL COMMUNICATIONS CONFERENCE: "PRETTY INTERESTING!"

Almost 150 aficionados of digital communications came to Chicago for the 27th annual ARRL/TAPR Digital Communications Conference (DCC) the weekend of September 26-28 <http://www.tapr.org/dcc.html>. This conference is an international forum for radio amateurs to meet, publish their work and present new ideas and techniques. Presenters and attendees had the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications. Not only was the conference technically stimulating, it was a weekend of fun for all who have more than a casual interest in any aspect of amateur digital electronics and communications; introductory sessions were scheduled throughout the conference to introduce new technical topics for both beginners and experts.

One of the attendees was QEX Editor Larry Wolfgang, WR1B, representing the ARRL <http://www.arrl.org/qex>. He gave a talk "Writing for Publication - It's Not Rocket Science (Even if You Are Writing About Rocket Science!)." Retired ARRL Chief Technology Officer Paul Rinaldo, W4RI, also represented the League, speaking on "SDR Outlook." Central Division Vice Director Howard Huntington, K9KM, was present, as was ARRL Contributing Editor H. Ward Silver, N0AX.

Wolfgang, who gave his presentation on Friday morning, spoke with many participants throughout the conference who told him that they were enthused about writing something for QEX. "It also seemed like almost everyone there was making a point to stop me in the hallways or at mealtimes to tell me how much they are enjoying QEX, and to thank me for the effort I putting into the magazine," he said.

Friday was a full day of technical presentations, including "A Protocol for Multicast Weather Data Distribution over AX25," by Nick Luther, K9NL; "SuitSat-2 Update," by Steve Bible, N7HPR; "EcomScs and GateWayScs AX25 Packet Radio E-Mail," by John Blowsky, KB2SCS, and "Frequency and Other New Initiatives in APRS," by Bob Bruninga, WB4APR. The last presentation of the afternoon was "D-STAR Uncovered," by Peter Loveall, AE5PL.

The DCC provided a separate demonstration room for participants to show off their latest projects. Wolfgang said he had some "play time" in this room after all the presentations on Friday. After dinner that evening, he said there was "a string of D-STAR presentations starting at 7 PM and lasting until after 10 PM. These were all very interesting presentations, including the D-RATS messaging software by Dan Smith, KK7DS. Peter Loveall, AE5PL, presented 'D-PRS Update' about ways the D-STAR data links can be used to send and plot APRS position maps or interface to the APRS system. Robin Cutshaw, AA4RC, gave a presentation about DV-Dongle, a PC add-on that allows connection to D-STAR repeaters around the world through an Internet connection. Pretty interesting!"

In addition to the main technical presentations on Saturday, there was also a full day of introductory sessions, mostly about digital voice and D-STAR.

Also on Saturday, Matt Etttus, N2MJI, gave a report on the Ettus Research USRP2. Tom Clark, K3IO, gave an "AMSAT Update." Paul Wiedemeier, KE5LKY, presented his paper on "Using UDPcast to IP Multicast Data over Packet Radio." Paul Rinaldo, W4RI, gave his "SDR Outlook" that covered the international regulatory front and presented some of the concerns that some world governments have with regard to the flexibility of SDR. Scott Cowling, WA2DFI, gave an "HPSDR (High Performance Software Defined Radio) Update" during which he described the various circuit boards that make up the HPSDR project. He also demonstrated a complete working radio in the demo room. Jerry Shirar, N9XR, presented a paper called "Clocking the Data," concerning the use of an inverter and a crystal to form a Colpitts oscillator.

Victor Poor, W5SMM, gave an update on Winlink 2000. "He reported that the network presently consists of one Web site, five Common Message Server sites around the world, 150 Radio Message Service Pactor Gateway sites, 800 RMS Packet Gateway sites and over 13,000 registered users," Wolfgang said. "He also mentioned that inactive users are purged from the system from time to time."

Rick Muething, KN6KB, described his "WINMOR Soundcard ARQ Mode for Winlink HF Digital Messaging." Wolfgang said that this was a much anticipated presentation: "Rick reported that WINMOR is 3 to 4 months from beta testing. His preliminary comparisons to Pactor 1, 2 and 3 are based on simulator tests. He indicates that WINMOR will have better throughput than Pactor 1 and comparable to, or perhaps a bit better than Pactor 2, but not quite as good as Pactor 3. He indicated that the efficiency is within about 70 percent of Pactor ARQ."

The TAPR Annual Meeting was held after all the presentations on Saturday. During the meeting, the Board of Directors discussed the idea of coming back to the same hotel for next year's DCC. "The local group that supported DCC this year, including Mark Thompson, KA9MDJ, and Kermit Carlson, W9XA, did a great job of providing AV support," Wolfgang said. "Ron Steinberg, K9IKZ, who owns a local audio/visual company, provided two large projection screens and projectors, so every presentation was shown on both sides of the room, as well as on a widescreen TV outside the room. The audio was very easy to hear, even if you were in the hall outside the room or in the demonstration room; the set-up was left there from the W9DXCC Convention the previous weekend. They offered to provide the same support for next year, if the DCC returned. So, the decision was made to break with tradition, and return to Chicago next year, September 25-27."

Phil Harman, VK6APH, presented the Sunday morning seminar, "Software Defined Radio through the Looking Glass." Wolfgang said he found Harman's presentation to be understandable "at my level of knowledge, and he gave a lot of good insight into many of the design decisions that went into the High Performance Software Defined Radio Project. I found his descriptions of how the hardware and software work to be very interesting. The four hours went by quickly."

For more information on the 2008 Digital Communications Conference, please visit TAPR's DCC Web page <http://www.tapr.org/dcc.html>.

==> 2009 ARRL HANDBOOK (EIGHTY-SIXTH EDITION) NOW AVAILABLE

"The 2009 ARRL Handbook for Radio Communications" uniquely serves both amateur experimenters and industry practitioners, emphasizing connections between basic theory and application. "The ARRL Handbook" is simply the standard in applied electronics and communications. This 86th edition is both a useful introduction to radio communication and features the most current material on electronics and Amateur Radio.

Topics in the 2009 edition include:
* Principles of Electronics -- including basic theory, components,

analog and digital circuit construction.
* Radio Communications Fundamentals and Design -- including modes and systems, filters, EMI, digital signal processing and software radio design, and RF power amplifiers.
* Real-World Applications and Operating -- including practical projects, station setup, antennas, transmission lines, and methods for testing and troubleshooting.
* References -- filled with hundreds of detailed tables, illustrations and photos.
* And much more!

The "Handbook" is filled with valuable references, practical examples and projects. The CD-ROM at the back of the book includes all of the fully searchable text and illustrations in the printed book, as well as companion software, PC board templates and other support files.

Revisions to the 2009 "Handbook" include updated material on amateur satellites, including details for today's fleet of operational satellites, as well as updated versions of accessory software on the CD-ROM included with the book.

New projects in the 86th edition include:
* RockMite QRP CW transceiver -- now expanded to cover 80, 40, 30 or 20 meters.
* Audio Interface for Field Day or Contesting -- audio and mic connections for two operators sharing a radio.
* Remote Power Controller -- turn high current devices off and on.
* Audible Antenna Bridge -- tune for the lowest SWR by ear.

The softcover edition of the "Handbook" sells for $44.95; the hardcover sells for $59.95 <http://www.arrl.org/catalog/?item=no-hb2009>. Both editions are available now.

==> IARU-ENDORSED BOOKLET PROMOTING ETHICS, OPERATING ISSUES, NOW AVAILABLE

A 67-page booklet, "Ethics and Operating Procedures for the Radio Amateur" by John Devoldere, ON4UN, and Mark Demeuleneere, ON4WW, is available for free download from the ARRL Web site <http://www.arrl.org/awards/dxcc/Eth-operating-ENarrl-SITE-1jul2008.pdf> . This is an "Americanized" version of the booklet the authors wrote for an international audience. An international version is also available <http://www.iaru.org/Eth-operating-EN-iaru-SITE-1july2008.pdf>.

At its June 2008 meeting, the IARU Administrative Council endorsed and recommended the principles set out in the booklet as a means of encouraging all radio amateurs "to operate to the highest levels of proficiency, with proper consideration for others using the amateur radio bands" and as a tool "to teach newcomers and others correct operating behavior." The booklet mainly addresses HF operating issues, but the principles are also applicable to VHF and higher bands.

ARRL Chief Executive Officer and IARU Secretary David Sumner, K1ZZ, expressed appreciation for Devoldere's and Demeuleneere's efforts: "The authors are well known, experienced HF operators who are concerned about on-the-air operating standards and who decided that 'It's better to light a candle than curse the darkness.' Anyone who reads their booklet will learn something, no matter how experienced they may be."

==>SOLAR UPDATE

Tad "When all the birds are faint with the hot Sun" Cook, K7RA, this week reports: The sunspot appearance reported last week seems to follow the pattern emerging for most of 2008. A spot will appear for one or two days and then suddenly it is gone. Last week's report mentioned the solar wind being at an all time low. This week, NASA announced that so far, 2008 is the "blankest year of the space age," with more than 200 spotless days <http://science.nasa.gov/headlines/y2008/30sep_blankyear.htm>. The minimum following Solar Cycle 18 in 1954 had 241 days without sunspots, and it preceded the solar max in 1959 for Solar Cycle 19 that had the highest sunspot numbers on record. Sunspot numbers for September 25-October 1 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 68.2, 67.7, 67.3, 67, 66.8, 66.2 and 65.8 with a mean of 67. The estimated planetary A indices were 4, 4, 2, 3, 2, 4 and 6 with a mean of 3.6. The estimated mid-latitude A indices were 1, 2, 1, 2, 2, 3 and 7 with a mean of 2.6. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by John Keats' "On the Grasshopper and the Cricket" <http://www.sonnets.org/keats.htm#150>.

==>IN BRIEF:

* This Week on the Radio: This week is the YLRL Anniversary Party (CW) is October 3-5. The EU Autumn Sprint (SSB), the TARA PSK Rumble Contest and the NCCC Sprint are October 4. The Oceania DX Contest (Phone), the International HELL-Contest and the California QSO Party are October 4-5. The UBA ON Contest (6 meters) is October 5, the 432 MHz Fall Sprint is October 8 (local time) and the RSGB 80 Meter Club Sprint (CW) is October 9. Next week, the 10-10 International 10-10 Day Sprint and the NCCC Sprint are October 10. The YLRL Anniversary Party (SSB) is October 10-12. On October 11, be on the lookout for the FISTS Fall Sprint and the EU Autumn Sprint (CW). The Makrothen RTTY Contest, the Oceania DX Contest (CW) and the Pennsylvania QSO Party are October 11-12. The North American Sprint (RTTY), the SKCC Weekend Sprintathon and the UBA ON Contest (SSB) are October 12. The NAQCC Straight Key/Bug Sprint is October 15. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more

info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration remains open through Sunday, October 26, 2008, for these online course sessions beginning on Friday, November 7, 2008: Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Technician License Course (EC-010); Analog Electronics (EC-012), and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Jim Weit, KI8BV, Wins September QST Cover Plaque Award: The winner of the QST Cover Plaque Award for September is Jim Weit, KI8BV, for his article "An All Band HF Dipole Antenna." Congratulations, Jim! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the October issue by Friday, October 31.

* West Gulf Vice Director Appointed to Texas State Agency: Texas Governor Rick Perry has appointed ARRL West Gulf Vice Director Dr David Woolweaver, K5RAV, to the Council of the Department of State Health Services (DSHS), formally known as the Texas Department of Health. The nine member council makes recommendations regarding management, operation, policies and rules for public health, mental health and substance abuse.

* Army Amateur Radio Station in Iraq Seeks American Military Personnel to Lead Station: Army Captain Jeff Hammer,YI9IC/N9NIC, the custodian of the Baghdad Amateur Radio Society (BARS) <http://www.usaars.com/bars.htm>, is due to come home after a nine month tour of duty with the Indiana National Guard. "I need someone I can turn the BARS station over to," he said. "Please assist me in finding other Amateur Radio operators in or coming to Iraq." The Baghdad station boasts the following equipment: an ICOM IC-7000 transceiver, an LDG Z-100 autotuner, a Kantronics KAM XL wireless modem, a RIGblaster Pro, an MFJ 25 A power supply, plus a Cushcraft MA5B 3-element beam and a

Trans World TW2010 vertical dipole. The club library is valued at $400. All items in the station have been donated by various Amateur Radio vendors. Hammer, a military intelligence officer who previously served in Afghanistan, took over the club leadership last spring from Army Major Scott Hedberg, AD7MI, when Hedberg returned to the US. Since his arrival in April 2008, Hammer has mentored half a dozen service members for their licenses and led the station's first ARRL Field Day operation. "We enjoy learning about radio and talking with unique people in unique places," he said. "We've been excited to talk to many stations back in the U.S." Hammer said it can get busy, too, handling MARSgrams between soldiers and their families during holidays. BARS members operate under the Army call sign AEN5NAA relaying soldier messages through MARS WinLink stations in Kuwait or Germany <http://www.netcom.army.mil/mars/marsgrams.aspx>. Keeping the club active is a challenge in the face of constant troop rotation, Hammer said. "Operating Amateur Radio in camp is fairly easy, as long as you ask your commander and don't cause interference," he said. "If you know of any hams deploying to Iraq, contact me as soon as possible to coordinate the transfer of equipment and discuss licensing procedures." Hammer can be reached via e-mail <jeffrey.hammer@iraq.centcom.mil>.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for

e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

What sort of inverted V and what sort of results? (Coax fed, how high are the center and the ends, what's the angle of the V?)

> 1. Performance?
> 2. Is noise worse/better/the same?
> 3. Is a quarter-wave radiator essential, or can it be shorter?
> 4. Loading/tuning?

I don't have much experience with 80 meter verticals but I do know these basics:

1) A full-size one is 60-65 feet tall, and needs a ground system to match. Shortening sacrifices bandwidth and radiation efficiency. Yes, a lot can be done with a small antenna but you're looking for something better than the inverted V.

2) Verticals tend to be noisier, particularly on the lower bands. This is why you will see 160 and 80 meter DXers and contesters using verticals for transmitting and Beverages or other low-noise antennas for receiving.

3) A vertical will give you low-angle radiation, which is great for DX when the band is open, and good for local (few dozen miles) anytime, but for the typical ragchew 50 to 1000 miles or so it can be disappointing.

4) A decent inverted V can do a good job as an all-around antenna. I've used a homebrew 80/40 coax fed trap inverted V with 100 watts for years, and had many excellent QSOs with it on 80. Center at about 40 feet, ends about 15 feet, transcontinental and transatlantic QSOs common if I stay up late enough. Many, many contest QSOs too. Not a worldbeater but not a problem either.

> put power into it?

The simplest way I know is to use a QRP wattmeter and a dummy load.

First, set up a rig to feed the dummy load directly, through the dummy load. Use the highest practical band (meaning what you have gear for). Set your rig to deliver a few watts and record the exact reading, forward and reflected. (By running low power you don't risk your rig, and you test that the dummy and wattmeter work).

Then connect the rig and wattmeter to one end of the cable to be tested, and the dummy load to the other end. Recheck the forward and reflected power readings - they shouldn't be much different if the cable is any good at all. (If you have any significant reflected power when feeding the dummy load, it's clear the cable has water, an open or a short someplace).

Finally move the wattmeter to the far end of the coax to be tested, and put it just before the dummy load. Get one more set of forward and reflected power readings. Compare with the readings when the wattmeter is at the rig end of the cable. Compute the loss, convert it to dB, and see how it compares to the expected value for the cable.

For example, suppose the cable is 50 feet of RG-8U and I do the test on 40 meters. Suppose the wattmeter says 20 watts goes in but only 10 watts comes out, and almost no reflected power. That's half the power (3 dB) lost in a cable that's supposed to be well under 1 dB per 100 feet at 7 MHz. Something's wrong.

Amateur Radio Newsline(tm) Report 1625 - October 3, 2008

Amateur Radio Newsline report number 1625 with a release date of Friday, October 3rd, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. Richard Garriott, W5KWQ, says he plans to talk to kids from space. Also, DX has to wait as the sun remains silent, Afghanistan coming on the air soon, A-P-R-S can now help you locate ham radio newscasts and simplex may be better than repeaters. All this and a warning about a new e-mail scam aimed at the ham community on Amateur Radio Newsline(tm) report number 1625 coming your way right now.

HAM RADIO IN SPACE: W5KWQ PLANS STUDENT SCHOOL CONTACTS

When Richard Garriott, W5KWQ, becomes the next civilian to fly into space later this month, he plans to talk to students live using amateur radio. Burt Hicks, WB6MQV, is here with the details:

--

The ham radio educational events with Richard Garriott, W5KWQ, on board the International Space Station are currently scheduled for Thursday, October 16th and Friday, October 17th. This, with middle school students from Challenger Learning Centers across the country.

First up will be students from Howard B. Owens Science Center's Challenger Center in Lanham, Maryland, Challenger Learning Center of Columbia in South Carolina, Verizon Challenger Learning Center in Tampa, Florida and the Brownsburg Challenger Learning Center in Indiana. They plan to ask Garriott questions about living and working in space of on October 16th.

Students from the Indianapolis Challenger Learning Center in Indiana, Challenger Learning Center at Paducah in Kentucky and Challenger Learning Center-St. Louis in Missouri will talk to W5KWQ on Friday, October 17th.

These events will be broadcast live on the national website. Also at that site are lesson plans in support of Richard Garriott's on orbit activities, archived webcasts, podcasts, and student's predictions of what will happen in the weightless environment of space. All are available on Challenger Center's national website at www.challenger.org

For the Amateur Radio Newsline, I', Burt Hicks, WB6MQV, in Los Angeles.

--

Richard Garriortt, W5KWQ, is the son of NASA's Skylab Astronaut Owen Garriott, W5LFL. Owen Garriott was also the first ham radio operator to ever come on the air from space. (ARISS, SAREX, ANS)

RADIO SCIENCE: NASA SCIENTISTS CALL 2008 BLANKEST SUNSPOT YEAR OF THE SPACE AGE

The wait for better D-X conditions continues but it could be a longer wait than originally projected. Astronomers who count sunspots have announced that 2008 is now the "blankest year" of the Space Age. NASA Science News says that as of September 27, the sun had no visible sunspots on 200 days of this year.

To find a year with more blank suns, you have to go back to 1954. That's
,
three years before the launch of Sputnik. Its also the year that the sun's disk was devoid of sunspots 241 days.

And right now the prognosis for increased solar activity seems dim. David Hathaway is a Solar Physicist at the NASA Marshall Space Flight Center. He says that sunspot counts are at a 50-year low and that we are experiencing a deep minimum of the solar cycle. You can read more at http://science.nasa.gov/headlines/y2008/30sep_blankyear.htm?list6529 (NASA
)

BREAKING DX NEWS: AFGHANISTAN COMING ON THE AIR

Speaking of D-X, even as the war to rid Afghanistan of Taliban insurgents continues, ham radio is again taking to the air in that nation. And from October 5th to the 31st, KE6GFF will be operating from the capital city of Kabul as T6EE

Listen out for T6EE only on 14 dot 200 MHz +/- QRM as other frequencies are not permitted with his license. He does plan to take part in the upcoming CQ WWDX Contest in SSB on Oct 25th and 26th. QSLs via KE6GFI.

We will have more DX news at the end of this weeks report. (DXNS)

RADIO LAW: WISCONSIN CLUB WINS CONTESTED CALL

A Wisconsin radio club has been ruled as the new legal holder of a contested vanity call sign. This as the FCC issues an order on September 24th that rules the Falls Amateur Radio Club to be the rightful recipient of call sign W9CQ. Only one problem. It can't get the call. At least not yet. Amateur Radio Newsline's Don Carlson, KQ6FM, reports:

--

The Falls Amateur Radio Club and the QRQ CW and Contest Group had both claimed they were entitled to use the W9CQ call. This, after it was voluntarily surrendered by Robert C. Moldenhauer who had received the call after claiming to be a relative of the deceased previous holder. When he realized that he was not, he offered the call back to the FCC for it to reassign.

This past January 2nd, the Falls Amateur Radio Club filed an application requesting the W9CQ call. The FCC dismissed the application on the grounds that the call sign was not available, because it was less than two years since it had been surrendered by Moldenhauer. But wait a minute. Didn't Moldenhauer admit that he should not have gotten W9CQ the first place?

That's what the Falls club believed and filed a Petition for Reconsideration on January 23rd. In it, the club claimed that the call sign should have been made available to the vanity call sign system on January 2nd because Moldenhauer was not eligible for the call sign prior to the expiration of the two-year waiting period. It also claimed to be the only one who filed for that call on the January 2nd date.

But on May 23rd the QRQ CW and Contest Group submitted an application for the W9CQ call. The application stated that QRQ was acting with the written consent of a nephew of Paul Kent. The QRQ application was granted on June 10th.

But what about the petition for reconsideration filed by the Falls Amateur Radio Club? When it finally got around to making a decision, the FCC stated that they agreed with Falls Amateur Radio Club that call sign W9CQ should have been made available to the vanity call sign system on January 2nd because Robert C. Moldenhauer was not eligible for it in the first place. And it agreed that the Falls Amateur Radio Club was the only applicant for that call sign on January 2, 2008, and that the call should have been assigned to Falls Amateur Radio Club station.

Confused? Well it gets even better.

One would think that the FCC would simply yank the W9CQ call from the Q-R-Q club and give it to the Falls group since the FCC itself said that Falls should have gotten it in the first place. But that going with the simple and obvious is never the way of the Washington bureaucracy.

Instead of switching the call to the club that the FCC itself says deserves to have it, the agency said that it does not see how, at this time, it could set aside QRQ's application for W9CQ. This is because that grant is a final action.

Then it say wait a minute, there is a bureaucratic loophole. Its called Section 316(a)(1) of the Communications Act of 1934, and it permits the Commission to modify a station license if the action will promote the public interest, convenience, and necessity. And using it the FCC proposed to modify QRQ's Amateur Radio station license back to its old KC9MWH. This is the call sign it held prior to the grant of its application for W9CQ. The FCC stated that upon the modification of QRQ's license back to

KC9MWH, they would then be able to assign call sign W9CQ to Falls Amateur Radio Club.

And so it is that the FCC has ordered that the petition filed by Falls Amateur Radio Club be granted to the
extent indicated" in the Order and their application is returned to pending status. I t was further ordered that it is proposed that the license of QRQ be modified" by returning the previous call sign of KC9MWH.

But here's the bureaucratic Catch 22. The FCC says that it will not issue a modification order until QRQ CW and Contest Group has received notice of the proposed action and has had an opportunity to file a protest to the modification. Such a protest has to be filed within thirty days of the release date of the 'Order on Reconsideration and Order Proposing Modification,' and has to contain sufficient evidence to show that the modification would not be in the public interest. The FCC further stated that if no protest is filed, that QRQ will have waived its right to protest the modification and will be deemed to have consented to the modification.

Confusing? Very much so, to which Ill add to please not ask me to explain any of this. I am not a communications lawyer nor do I play one on T.V. In fact I'm just Don Csrlson, KQ6FM, in Reno, reporting the facts for the Amateur Radio Newsline.

--

Obviously we won't know if QRQ files a protest until the FCC says its received one or QRQ offers a public statement. And if they do protest, it could also mean that this matter could drag on for months or years to come. And as of this writing, the FCC database shows that the W9CQ call is still in the hands of the QRQ CW And Contest Group of Vincennes, Indiana. (FCC, ARRL, others)

RESCUE RADIO: CANADIAN HAMS TRACK HURRICANE KYLE

Hams in Eastern Canada were activated as the latest tropical event of the season made it was North before making landfall in New Brunswick Nova Scotia on Sunday, September 28th. Canadian amateur radio operators provided information on Hurricane Kyle to the both the U.S. National Hurricane Center in Miami as well as having it passed to the Canadian Hurricane Center in Dartmouth, Nova Scotia.

Kyle's impact on Nova Scotia was blunted by the cold waters of the north Atlantic Ocean. None the less wind gusts of 124 kilometers per hour were recorded at Baccaro Point in Nova Scotia's Shelburne County. A Canadian coast guard ship reported wind gusts up to 154 kilometres per hour off the Shelburne coast. The winds knocked down a construction site in Shelburne and caused thousands to lose power. Nova Scotia Power said that at Kyle's height, winds knocked out power to more than 40,000 customers across the province, mostly in the southwestern part.

Most of the ham radio hurricane tracking reports were made through the Voice Over Internet Protocol Hurricane Net network which uses interlinked IRLP and Echolink nodes. These are connected to WX4NHC, which is the Amateur Radio station at the National Hurricane Center in Miami. In addition, there were Amateur radio stations from Australia and Germany assisting in net activities. (RAC)

RESCUE RADIO: HURRICANE KYLE BRUSHES US COASTLINE

Before hitting the Nova Scotia coastline, Hurricane Kyle brushed its way across Eastern New England region. Heavy rain associated with the storm caused some flooding in the region.

According to the ARRL, the amateur radio station at the National Weather Service in Taunton, Massachusetts was activated for the weather event. Its call is WX1BOX, and it coordinated SKYWARN operations Friday afternoon through Sunday.

The ARRL District Emergency Coordinator for Maine District 3 is Phil Roberts, K1PAR. He activated several nets in his on Saturday night with all ARES members in the affected counties were on standby. In Southwestern Maine, ARES members were also on standby for possible activation by their respective served agencies. Maine Section Emergency Coordinator, Bryce Rumery, K1GAX, provided reports all day Sunday to ARRL Headquarters before the nets were advised to stand down. (ARRL)

**

PUBLIC SERVICE: THE 2008 USFAR MARATHON AND HAM RADIO

Ham radio was a part of the action at a recent Ohio marathon. Bill Pasternak, WA6ITF, is here with the details:

--

A team of 35 radio amateur operators from organizations from around the Dayton, Ohio area provided critical communications for the recent running of the United States Air Force Marathon. Hams operating under the direction of Greene County Amateur Radio Emergency Service provided an information channel between the hydration stations, medical stations, and the United States Air Force Marathon staff.

For the twelfth year, this marathon was held at Wright Patterson Air force Base . Most of the radio systems were deployed late on Friday, September

19th or very early on event day of September the 20th. The primary repeater normally used for the event is owned by the Upper Valley Amateur Radio Club of Fairborn Ohio. Due to the remnants of Hurricane Ike, it did not did not have commercial power and battery backup ran out on earlier in the week. To make it available for the marathon, the Fairborn group was able to obtain a generator to keep the machine in operation for the day. Over 500 routine and emergency messages were passed during the event.

For the amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the studio in Los Angeles.

--

This years United States Air Force Marathon supported over 7500 military and civilian runners from around the world. Over 1500 volunteers including 35 hams assisted with the event. (KF4KWW, WS8B)

**

RADIO SCAM ALEET: E-MAIL FROM AMEX TO HAMS A PURPORTED PHONY

A possible new fraud scheme targeting radio amateurs over the Internet This, according to Robert Greenstein, AA6A, who reports via QRZ.com that the scam has apparently been directed to ham radio callsign sign e-mail addresses.

Greenstein says that the electronic solicitation purportedly looks like an e-mail from American Express. Specifically from "AMEX SERVICES" with a Subject Line: reading: "AMEX UPDATE". The messages seeks to have the recipient respond by sending back a font and rear copy of both their driver's license and American Express card.

Greenstein's post indicates that the message originates from the aaron@digital-glass.com and has an I P address of 82.165.179.193.

More savvy e-mail users will readily see that the message is a bogus attempt to obtain personal and account information.

The bottom line to this. If you get any e-mail asking for your personal information -- no matter whom its from -- do not ever respond. Delete it and in doing so you protect your identity and your life savings. (AA6A via QRZ.com)

**

ENFORCEMENT: FOLLOW-UP ON ALLEGED UNLICENSED STATION OPERATOR INCARCERATED IN FLORIDA

A follow-up to last weeks story about the arrest of an alleged unlicensed radio station in Florida. You may remember that authorities in Wilton Manors, Florida announced the arrest 23-year-old Constantinos Rigalos. This, for apparently operating an illegal FM radio station which is a third-degree felony in Florida. But now we learn that's not where the

story ends.

In addition to local law enforcement action, word that the FCC appears to have been involved in the bust. In a September 10th letter to Rigalos, the regulatory agency says that its Miami Office received information that an unlicensed broadcast radio station on 103.9 MHz. One that was allegedly operating in the Wilton Manors area. Also, that's its agents traced the signal to Rigalos residence in Wilton Manors.

The FCC also says that it has information that indicates Rigalos was one of the operators of this station. Its letter warns him that his operation is illegal and must cease at once. If not, on a federal level the penalties he could face include seizure of the radio station equipment, monetary fines, and criminal sanctions including imprisonment. This is in addition to the Florida state prosecution that is already underway. (CGC, FCC)

**

RADIO LAW: THE FCC SAYS THAT TWO ARE REALLY ONE

Ten applications for noncom educational FMs in various states have been dismissed by the FCC. This, in a case involving two separate but related organizations in Ohio.

Spirit Communications and The Helpline each filed 10 applications in last fall's noncom filing window. The FCC then received an anonymous petition alleging that Helpline had been created by Spirit to deliberately circumvent a cap of 10 applications.

Helpline told the FCC that the two organizations do not have common directors and in fact the groups have had separate boards and officers since just prior to their application filings. But the FCC found that Spirit's de facto control of Helpline continued, so the organizations could
not apply for 10 each.

Among other things the FCC found that the new Helpline board consists of two Spirit employees and their spouses, and that Helpline has no employees of its own. Rather, it relies on Spirit employees to "volunteer" to perform basic functions. Based on this, the FCC's Audio Division of the Media Bureau now has ruled that Helpline's applications should still be attributed to Spirit and the maximum of 10 applications does prevail. (RW)

**

RADIO LAW: TEXTING OUT AND GPS IN UNDER CA LAWS

California Governor Schwarzenegger has signed two bills into law that affect the installation or operation of electronic communications devices in vehicles. The first one signed on September 25th makes California the latest state that bans drivers from text messaging while behind the wheel.

The ban on texting while driving, backed by fines starting at $20 per offense, will come into force on January 1st 2009. It closes a loophole in

a law that requires the use of hands-free devices while driving and talking on a cellular phone. That law that took effect this past July but failed to include text messaging.

Meantime, the California Governor has now signed into law a bill that was put forth earlier this year that will again legalize windshield mounting of GPS devices. Also beginning January 1, 2009, California drivers will be able to suction cup their GPS units but there are some restrictions. The only places legal will be in the lower 7-inch corner farthest away from the driver or in the lower 5-inch corner closest to the driver. The use of suction cup on-glass mounting had earlier been banned due to safety concerns but a loud out cry from the public seems to have brought them back. (K6LCS and other published reports)

**

ON THE NET: COMCAST TO LIMIT RESIDENTIAL INTERNET BANDWIDTH

Internet provider Comcast has announced that it plans to place limits on the amount of broadband usage it will allow its residential customers. Jim Meachen, ZL2BHF reports:

--

Comcast say that the 250 gigabytes is about 100 times the typical home usage. It claims that the average residential customer uses only two to three gigabytes a month. It also says that under one percent of customers exceed the 250 gigabyte level in a given 30 day period, but that small number can slow the system down as they download a large number of huge media files.

Under the Comcast plan, residential subscribers who exceed the 250 gigabyte limit would risk having their service terminated for up to a year. Users who exceed that amount will not have their access switched off immediately, nor will they be charged for excessive use. Instead, they would likely be contacted by Comcast and officially notified of the cap. If they exceed the limit a second time or simply refuse to comply, then service termination could result.

In recent months a number of Internet Service Providers have considered clamping down on their most active subscribers. Mainly those involved in peer to peer media file exchange services. The ISP's say that the limits are needed to insure fair access to the network for who need to reach the Internet.

--

Reports are that several bloggers who seem to indicate that they are involved in file sharing may challenge Comcast on the data transfer in court. (Published reports)

HAM RADIO BUSINESS: EMCOMM OPS FROM CREATIVE SERVICES SOFTWARE

Creative Services Software has announced the release of EmComm Ops, which the company describes as a new software solution for packet radio operations.

Creative says that the software is designed primarily for emergency radio communications. It says that it assists amateur, commercial and MARS radio operators to connect to, access, integrate and operate packet radio stations with a Windows PC or laptop from a fixed station or in the field.

EmComm Ops is the first addition to Creative Services Software recently rebranded Radio Operations Center product line. A free, 30-day trial of EmComm Ops is available now on the CSS Website. That U-R-L in cyberspace at www.cssincorp,com (Crerative Services release)

NAMES IN THE NEWS: W0ODY TO RECEIVE UNIVERSITY AWARD

A ham radio operator is among two members of the Evangel University staff honored October 10th during Evangel University's homecoming celebration. Librarian Woodvall Moore, W0ODY and Marilyn Campbell who is an administrative assistant in the Business and Economics Department, will both receive a Distinguished Service Award.

Known as "Woodie" to friends, Moore has been a fixture in Evangel's library
since 1976. He earned a bachelor of science from Southern Bible College and a master of library science from the University of Kentucky. Starting

as reference librarian, he was promoted to director within one year. His current title, director of library and media services, reflects the changes in his role that have taken place over the years. He is also a past president of the Association of Christian Librarians.

Evangel University is a private Christian university associated with the Assemblies of God church. (Press release)

**

RADIO TECHNOLOGY ADVANCEMENT: THE NEWS AND APRS

Bob Bruninga, WB4APR, reports that he has created a new APRS information website. One that provides a look at who is transmitting ham radio newscasts like this one.

The new web page is designed to help those Newsline, RAIN and ARRL audio volunteers to get their APRS objects on the air. The concept requires the cooperation and support of listeners to these reports.

According to Bob, while a report like this one is on the air, an APRS operator in that area should be putting out on an approved APRS frequency as a live object at the time of the event. That object would shows up on the front panel of every APRS mobile displaying the frequency to listen to, the direction and distance to the repeater and the topic being transmitted.

Bobs new APRS news and information web page includes Amateur Radio Newsline, the Rain Report and the ARRL Audio News. You can find it on line at www.aprs.org/On-Air-Beacons.html. (WB4APR)

**

WORLDBEAT - RUSSIA: VOA MAKES MAJOR CHANGES TO RUSSIAN PROGRAM DELIVERY

The Voice of America announced that it has eliminated radio broadcasts in Hindi, Bosnian, Serbian, and Macedonian as of September 30th. The broadcaster has also discontinued its 30-minute Russian weekly television program and will deliver text, audio, and video content to Russia's fast-growing Internet market.

The Voice of America says that it will accessible through digital devices. These include mobile Internet devices, cell phones that receive text and multi-media messages, and MP3 players.

According to a report from the British Broadcasting Company, the change in the Voice of America's Russian's program delivery reflects the crackdown on independent media and freedom of speech in Russia. The V-O-A's Russian radio broadcasts ended in July 2008. The BCC notes that Russian shortwave radio listenership also has continued to decline with fewer than two per cent of Russians using this medium to receive broadcasts. (BBC)

DX

In D-X, Word that DJ1OJ, will spend the winter on Teneriffa, in the Canary Islands until the end of March 2009. He will be active as EA8OM mainly using CW and RTTY. QSL via bureau to his home call or via Logbook to the World.

And F4EGS, is operating portable EY8 in the Tajikistan capital city of Dushanbe. He will be there through November 26th and is on the air using SSB, C-W, RTTY and PSK on 40 through 10 meters. QSL direct or via bureau to his home call.

S79TF will be the callsign of DJ6TF, who is going to spend his vacation time through October 14th on La Digue Island. His main emphasis is the 30 meter band and RTTY operation. That said, you can also find him working the other modes mostly at the lower band edges with his FT-890 and a vertical antenna. QSLs via DJ6TF either direct or via bureau.

Lastly, F5TLN will be in the Lebanon until February of 2009. He will work mostly in SSB but also some CW on all High Frequency bands. He says that he will confirm the QSL cards after his return home and points out that bureau QSL's will take some time. The bottom line on this one is to please be patient on this one.

(Above from various DX news sources)

**

THAT FINAL ITEM: THINK SIMPLEX

And finally this week, a rhetoric question. Can a ham have more fun on FM if he doesn't use a repeater? Jim Linton, VK3PC, of the WIA News thinks that you can:

--

The use of simplex operation is not new and in fact it was a way of life before voice repeaters arrived many decades ago.

If you find yourself on the shores of Australia's large inland sea, Lake Eyre, or someone else remote, a call on simplex FM can surprisingly achieve results. In fact a number of travelling radio amateurs do sit on the national calling frequency of and that should be encouraged. Simplex also takes away some of the hassles with repeater operation such as what repeater to use and those CTCSS access tones.

The Simplex Preservation Society is a club in the United States that is an alternative to what it calls the traditional repeater-centric amateur radio groups. It's not suggesting anyone gives up repeater use, but its members do monitor
simplex, make regular contacts that way and maintain a capability to be able to operate independently of repeaters. SPS members maintain, or improve, their VHF stations to ensure they can effectively communicate within their city limits.

Do you regularly evaluate your simplex capabilities or perhaps have an over-reliance on repeaters? There are plenty of regular repeater nets but

not as many simplex nets. As a suggestion a net controller could put everyone to the test by QSY'ing to simplex to see just how many can still maintain contact.

The Simplex Preservation Society believes that being simplex-capable will also be vital in times of natural disasters or other emergencies.

For the Amateur Radio Newsline, I'm Jim Linton VK3PC

--

More about the Simplex Preservation Society is on-line at www.73sps.com (WIA News)

Well, not to fall into the "I don't need one" category, but this tower is akin to putting an extension ladder along side the house.

Two sections, not self-supporting. Once the base section is in place, you can raise the second section. Total height is 38 feet.

But I will check the local building codes to see what they have to say about things. I believe (may be urban legend) that certain "structures" (both masts and towers) may have a "not needed below a certain height" condition.

Were this a self standing 85 foot Rohn beast and I were planning on doing more than maybe a simple tri-bander, I wouldn't hesitate to have it engineered first then pull a permit.

Panix is a fine service, but it's a full-service Internet facility.
Service for newsgroups only is available for much less cost, and that's
all that Comcast is dropping so why pay for more?

My preference, as others have put forward, is individual.net. I don't
like the free services for the reasons already mentioned. I find
individual.net a reasonable compromise between the free services that
are worth what you pay and the more expensive products that provide
additional function beyond what I need. If you're just looking for a
good provider for Usenet access, it fits the bill nicely.

Another alternative that I don't think anyone has mentioned is access to
newsgroups via the Google interface. Being able to use a real news
reader is well worth 10 Euros per year to me.

I have been using Forte Agent for quite a while. It is only a
newsreader and requires an external news service. Their "in house"
service, APM, runs about $15 per month.

For what I pay Comcast for internet access, an extra $15 a month is
not that expensive. My e-mail service costs about that much, if not
more.

It's just the principle of the thing, an "entitlement" so to speak.

Relevance to ham radio: it's how I keep in contact with r.r.a.m news,
and other hams on the two other groups, one hobby, one professional.

>me anyway, because I only use my Comcast cable modem to access
>my *real* ISP. :-)

The group is hosted on panix. My domain and mail server is on NetSol,
but my news server = the one I connect to - is newsgroups.comcast.net.
If this affects me - I will check with Comcast next week - I will have
to find another news service - perhaps NetSol has one or use the one
that Forte Agent works with.

Perhaps, to paraphrase the unforgettable Dr. C.T. Yang of MIT some 55
years ago - "THIS Comcast not the same as THAT Comcast....I only did
that to con-fuse you..."

No urban legend - the Uniform Building Code (now called something
else) exempts roof-mounted masts up to 12 feet in length. This covers
most residential TV antenna installations.

Phil Kane wrote:

> It's just the principle of the thing, an "entitlement" so to speak.

I have read that at least one Comcast customer called the company and told them that Usenet access represented a $5 per month value, and they (Comcast) reduced his monthly charge by $5. That may be totally false, it may depend on the specific customer-service person that was involved, or it might be a company policy ("if the customer complains, credit them with $5 per month"). I suppose it can't hurt to ask.

The bottom line is that ISPs have noticed that only a small percentage of their customers access Usenet these days. Many of them decided that outsourcing to companies like Giganews was more cost effective than running their own in-house servers; I think Comcast did that some time ago. Now they're concluding that they won't lose customers by simply dropping the service altogether, which is even cheaper than outsourcing it. The recent flap about kiddie porn in Usenet gave some of them a convenient excuse.

It's really not a big deal to find a low-cost provider and switch over to them. Individual.net makes it very easy to sign up, and the configuration in the news reader is straightforward. But yeah, the principle of the thing does grate a bit.

Times change.

PS: In the spirit of "you're a lawyer, so I'm going to pick nits,"

Phil Kane wrote:

Fix up your analog signal now and lock it in. If the HD station is up to par with their analog, you are ready to go. Have you picked up a box yet?

If your current system is more than 5 years old you might have to replace it all anyway due to deterioration. Use the good coax too. Pay attention to the db loss fugures at 900 Mhz. Lower is better.

O.M.'s
when i started the radiohobbythe first trx was a WO II .set A kind of
superreg with amplifier double use of the tubes rx superreg and tx
superreg tube used as a vfo and the lf tube was the tx final
the antenna was simple a length of wire tuned by a bicyclelamp.tuning a knob
and the lamp glowed.the knob simply moved a piece of pulverized iron in a
coil
some years later i used a fishing rod i wound a length of wire around it one
end to ground and feeded by an alligatorclamb.I hope youm understand that at
the ground end there was a coil so the antenna was a kind of baseloaded
with the fishingrod antenna you got a cheap and simple experimental antenna
type
i used tapped coil +length of wire taped coil and a coil in the centre
and taped coil length of wire and an coil at the top with some radials
I discovered that a grounding sistem is important However 60 feet of tuned
wire is not easy and a cupperpipe stroked in the ground to the waterlevel
is
expensive
An antenne is simplifyed a inductance and a capacity coil and condensator
that will resonate on the working frequency for matching the trx you may
divide the coil or condensor
a cooking recept for an antenna can not be given because the circumstances
are not the same and unpredictable only a few directions
now to days fishing rods are made from grafite so conductive when obtainable
use glasfibre rods
you also find a lot of information at the foxhunting groups at larry's site
sm0 vpo his balcony antenna

a lot of succes when experimenting

King of like Outlook, eh? <grin>

Seriously, it's a matter of personal taste. Most people who have used a real news reader hold Google in contempt as a way to access Usenet, but some folks like the interface . . . just like some folks love to work contests and other folks think they're a plague.

> put power into it?

The simplest way I know is to use a QRP wattmeter and a dummy load.

First, set up a rig to feed the dummy load directly, through the dummy
load. Use the highest practical band (meaning what you have gear for).
Set your rig to deliver a few watts and record the exact reading,
forward and reflected. (By running low power you don't risk your rig,
and you test that the dummy and wattmeter work).

Then connect the rig and wattmeter to one end of the cable to be
tested, and the dummy load to the other end. Recheck the forward and
reflected power readings - they shouldn't be much different if the
cable is any good at all. (If you have any significant reflected power
when feeding the dummy load, it's clear the cable has water, an open
or a short someplace).

Finally move the wattmeter to the far end of the coax to be tested,
and put it just before the dummy load. Get one more set of forward and
reflected power readings. Compare with the readings when the wattmeter
is at the rig end of the cable. Compute the loss, convert it to dB,
and see how it compares to the expected value for the cable.

For example, suppose the cable is 50 feet of RG-8U and I do the test
on 40 meters. Suppose the wattmeter says 20 watts goes in but only 10
watts comes out, and almost no reflected power. That's half the power

(3 dB) lost in a cable that's supposed to be well under 1 dB per 100 feet at 7 MHz. Something's wrong.

Hi O,m's
interresting things around here about groundwires at a dipole
in my reply of the 3.5mc vertical i told that an antenna can bee seen as a
coil and a condensor
tuned at working frequencie
a run of wire has an inductance remind the stripline tuned circuit at vhf
if we have a normal tuned circuit coil and capacitance it is understandable
we see the parts
if the coil is a length of wire a litle less but if we remind uhf circuits
if we move the condensorplates to the top and bottom of the coil we can see
still the tuned circuit
and we have a new experimental antenna type google H antenna for more
details also commercial available
even precooked building instructions very interresting to understand the
basics of antennatheory
if we strech the coil we got the wireantenna where is the condensator hi
the wiresurface to earth
now we can understand that the dipole is a serial combination of two coils
and 2 condensators and a thirdth to earth
notice that there are 2 radiation paterns a magnetic from the coil and a
statthic from the condensator
so it is to understand that a groundwire under the dipole has an influance
at the capacity of the antenna and also at its radiation
the groundconditions of our garden chances rain moisture sun etc
the condition of the diged wire will not chance and the results of the
antenne too.
i hope i cleared a little

> What puzzles me is the ground: I don't understand why such a wire would
> function as anything but, well, ground. I

I think it's really about ground (dirt) conductivity. Which varies all
over the place.

In some places (moist, loamy soil with lots of minerals, coastal areas
where the water table is very high and salty) the dirt is a pretty
good conductor, to the point where antennas "worked against ground" do
pretty well with just a ground rod or two. RF just bounces off that
sort of dirt.

In other places (dry, sandy, rocky soil) the dirt is a very lossy counductor, and acts more as an RF absorber.

With a low dipole, the ground is so close that it has major effects on the antenna. If it's lossy dirt, it just soaks up RF, but if it's a decent conductor, it can act as a reflector. The added wire is just a way of improving the ground conductivity in the dirt that is most involved: the dirt directly under the antenna.

> Guess which one I'll be using from now on?

Hi Phil,

I wouldn't abandon the doipole just yet.

At the urging of Roy Lewallen some years ago, I tried an experiment regarding the perennial "Which is better, a dipole or a vertical?" question.

I have a general purpose dipole, and a Butternut HF6V vertical. The vertical is setting on radials - around 20 at last count. So it performs pretty well.

I used an attenuating pad between the tuner and the antenna. The dipole comes in on ladder line, and the vertical on coax, so i switched the antennas at the tuner. Then I would switch attenuation in or out to match up the signals. What was "best" was the antenna with the highest received signal

The results were very interesting.

Some were like what we've been told to expect. The horizontal tended to perform better at relatively local distances for 80 meters and the vertical past 500 miles or so was usually better.

At higher frequencies this was not as marked, since the "take-off-angle" was not as different between vertical and horizontal antennas.

The Vertical was a little louder overall than the horizontal, also a bit noisier. I don't think that it actually heard better - in that regard.

But notice I said words like "tended" and "usually".

There were times that the horizontal antenna worked better on DX, and the vertical worked better on locals.

Then just to confound the matter, which antenna worked best could change in the middle of a QSO. I found that I had to be quick on the switches to make my measurements.

But the differences were significant enough that I immediately saw the value of having both antennas Sometimes several S-units on a given signal.

Other things I found were:

S-Meters are not linear within themselves.

Don't even think of transmitting with the attenuator in the antenna path. They don't handle much power at all.

But I did find out which antenna is better.

Yes.

While there are many possibilities as to the attraction of Ham radio
during economic downturns, some of them being plausible, and some not
so much, The topic does bring to light that Ham radio is an excellent
hobby/avocation to enjoy during such times.

We have had many years during which for most people, a hobby involved
laying out cash as the major part of the hobby. While many people could
become knowledgeable about something, say computers, a large part of the

hobby was that recent "dual processor motherboard and the killer video card to play the awesome game. Not to pick on computers - just an example. Even Amateur radio joined in the fray, with some mighty pricey rigs at the top end.

Fast forward to the near future. We've embarked on a new journey, because the bailout is just running the printing presses overtime, and even if it works out, that extra money equates out to inflation. So we're going to have some lean years coming. But that isn't so much a problem for Ham radio.

The great thing about our hobby is that we can do it on a shoestring. Even during the recent years, my first system, put together in 2001, only put me back a little over 400 dollars for the whole system.

$250.00 for an Icom IC-745
130.00 for an MFJ-949 tuner
Some ladder line, and some wire.

I've spent a lot more in recent years, especially in going mobile, but I can still be plenty cheap.

A dedicated scrounger could do much better yet, if there isn't a whole lot of discretionary money setting around the house. I bought some fully functional Heathkit single band SSB rigs for 25 dollars each, and a power supply to run then both for 40 dollars.

Even things like the "tuna tin" radios are not so bad during bad economies.

So all in all, I would say that your thoughts on the matter are pretty plausible.

I hadn't thought of that but your absolutely right - for *new*
equipment not Made In USA.

But unlike a lot of other "consumer" electronics, ham gear tends to
have a very long useful life. A 10-year-old computer is almost useless
but a 10 year old ham rig still has lots of QSOs in it. In fact a 10-
year-old mid-top line rig can be a better performer than a new bottom-
of-the-line rig. (Try to buy a Kenwood TS-870S, and see what they cost
if you can find one that the owner will part with....)

On top of that, once you have a station set up, the cost of operation
can be minimal. Unless you run superpower the effect on the electric
meter is very slight; no monthly connection fees and except for those
with big antenna farms there's not a lot of maintenance.

The TS-830 is another one on my gotta have list. Checked one out for a friend a while back, and what a nice radio. Looks and sounds good, TX reports were great, and had that tube ambience going on.

My IC-761 is a late 80's early 90's rig that is still going strong. The pc I was using at that time was a Commodore C-64. Old "Big Knob" is still sitting on my desk, while that computer is probably in a landfill somewhere. Aww, I kind of miss that computer....

You're really using just about as much power as if you were watching TV in the living room. I suppose I'm pulling a bit more, since I have the HF radio, the VHF radio, two computers - one for rig control, and one to email/surf/work, and a television on mute when I'm operating.

Hmm, sounds like I need to cut down on the multitasking a bit here.. ;^)

I'm using an old Radio Shack UHF/VHF medium sized antenna that's been on the roof for 20 years, along with the coax.

Through a cheap splitter I'm feeding two receievers, a new Sony Bravia LCD and an old analog through a converter box. Both work just fine.

There's an online calculator which you can use as a guide to determine how "good" an antenna you need. Plug in your ZIP code at http://www.antennaweb.org/aw/Address.aspx and it will evaluate your situation. (You just need to enter your ZIP, ignore the other information requested.)

You should be in good shape then, Jeff. The nearest transmitter to me is several miles further than that, and over flat terrain. I receive all channels nicely, with only occasional pixelation during rain/snow on one site which about 40 miles away and "off the side of the beam".

Is HDTV going to be a non-starter for antenna based reception? I think that many digital signals have a tendency to be just that, they are great, or they aren't going to be usable.

I've seen a lot of slightly noisy analog TV signals off the air that are viewable. Will a digital signal decode these?

The closest analogy I can think of is digital SSTV, in which the signal is sent out in batches, and if the receiving station does not copy that batch correctly, it asks for a resend - obviously not available on HDTV - and the sending station keeps sending it until the receiving station says "got it". But they are having troubles because some times the picture never finishes , it's stuck somewhere. Many people who are into Digital SSTV suggest running amps, and the higher power the better.

Just seems like a lot of people are going to find their setup that is adequate for analog, is marginal or unacceptable for digital.

I would still have my TS-830 sitting next to my TS-2000 if I hadn't got into a panic one time that I would be moving into my travel trailer. BTW the TS2000 draws 2.4 Amps in receive. The TS-830 can be powered in RX only with the filaments off from an external 12v 800ma source. I loved that radio, cleanest, best sounding TX/RX I ever owned. It's only drawback is ham band only coverage. I like to SWL also.

About 80 watts of solar panels would take care of your radio power problem. Also, the power isn't wasted in the winter as it is all alternative heating. My biggest utility bill is Sewer service. The biggest chunk of electricity goes to Refrigeration and A/C. If not for that I could go full solar 8 months out of the year.

One set of early-transition results were published recently - see
http://www.broadcastingcable.com/article/CA6596515.html for a summary.

The FCC is saying that they believe that around 15% of the TV stations
which switch over to ATSC digital transmission will end up losing a
significant amount of signal coverage.

>I've seen a lot of slightly noisy analog TV signals off the air that are
>viewable. Will a digital signal decode these?

I believe it depends a lot on the specific impairments in the signal.

My impression is that the digital decoding system is reasonably
resistant to moderate amounts of impulse noise. If by "slightly
noisy" you're referring to seeing some amount of static, on an
otherwise fairly clear signal, then the odds are that these channels
will decode OK.

If the signal is relatively weak (a substantial amount of "snow" on
the analog signal) but ghost-free... well, I think it'll depend on the
amount of signal strength. Down to some level it should work OK, and
below that level you'll lose the station.

I believe that one of the hardest things for ATSC decoders to handle
is multipath - in particular, multipath which changes fairly rapidly
over time. On an analog signal, multipath tends to cause ghosting of
the image. If your analog signal has one or more significant "ghost"
images (typically shifted to the right of the main image) then
successful ATSC decoding may depend on the sophistication of the
decoder... I understand that the better ones will "learn" the
multipath delay characteristics of the signal and can cancel it out
internally.

Multipath reflections which change rapidly with time are a harder
problem. These can be caused by nearby trees blowing around in the
wind, by airplanes flying by, and (according to one report I read)
large boats in a river or large container trucks on a road which is
near the line-of-sight between transmitter and receiver. If your
analog signal has "ghosts" which flutter around, appearing and
disappearing from one moment to the next, then it may be difficult for

a decoder to achieve and maintain a good lock on the bitstream.

>Just seems like a lot of people are going to find their setup that is
>adequate for analog, is marginal or unacceptable for digital.

I suspect that you're right. People in medium-to-deep-fringe suburban
and rural areas may be the worst affected. Even people in mid-city,
who have been using a simple rabbit-ears setup, may have difficulty
getting some channels as well.

It depends on your definition of "adequate for analog". The folks who are putting up with a very marginal analog picture are not going to get anything with the switch to digital. Anyone who has higher standards than watching a picture that's mostly snow and ghosts is going to be fine.

I'm using the same antenna that I've been using for years in the pre-digital world, and am having no problems with digital. Most of the transmitting locations are 40+ miles away, and even the channel where I was not getting a 100% clear analog picture looks fine in the digital version. I'm using native digital equipment, but was pleased with the performance of the converter box that I installed at my in-law's house.

It's the folks with the decades-old rabbit ears that are going to be affected. I'd like to think that this is a small minority, but I may be wrong.

Negative. Your worries are well founded, but the experience is that ATSC
will decode a signal that is not so good. It really depends on how much
fade margin is lost when any given station moves to a different frequency,
transmitter and antenna system. Coverage is more likely to be compromised
by the move rather than the different mode.

What happens to customer service when a company is bought out and everyone
is laid off? The biggest difference is that now there is a great big excuse
for failure. I'm sure the media will straighten it out fast or lose
customers. After all, it's their job to overthrow the government and they
take that very seriously.

On the ARRL web site is an article about HDTV coding:
http://www.arrl.org/news/features/2008/10/03/10374/?nc=1

The article references another article "What Exactly Is 8-Vsb Anyway?"
http://www.broadcast.net/~sbe1/8vsb/8vsb.htm
which goes into lots of detail about the coding of HDTV. The process is quite involved, and includes MPEG-II coding, forward error correction, trellis coding and a data interleaver. Quoting from this article:

The data interleaver scrambles the sequential order of the data
stream and disperses the MPEG-II packet data throughout time
(over a range of about 4.5 msec through the use of memory buffers)
in order to minimize the transmitted signal's sensitivity to burst
type interference.

All of these steps minimize the effects of noise and bursty interference.

I am looking for recommendations for an earphone, microphone and push-to-talk (PTT) for use with my handheld transceiver. My favorite handheld is a Kenwood TH-F6. I bought Kenwood's earphone/mike accessory, which consists of an ear bud and a mike/PTT on the cord. The mike has a clip to attach it clothing. I clipped it to the neck of my T-shirt. but I found it hard to use. It would not pick up my voice adequately unless I unclipped the mike and held it to my mouth.

Are there any earphone/microphone setups where I do not have to hold the mike in my hand.

Also, it would be nice not to need one hand to key the mike. I don't want to use VOX, because it will key on ambient noise, for example: a band during a parade.

One of these days somebody will offer a little BlueTooth dongle
the size of a 9V battery that plugs into your transciever/HT and
allows you to use a generic BlueTooth wireless ear-piece such
as most cell phones have built-in functionality for. I've thought
of making such a gadget myself, but entry into the BlueTooth
club doesn't come inexpensively.

Is this for in-car use or hand-portable..? If for mobile use I'd recommend
something permanently mounted in the vehicle; I use a hands-free kit I got
from Waters & Stanton which isn't cheap but works very well, it's based on
the units the police here in the UK use. There's a box into which you plug
a PTT switch, the microphone (which usually fits somewhere over the sun
visor) and the cable to the radio, which is customised for whichever radio
you want. There's also a power connector in case the radio can't supply
power (which for most mobile rigs it can, although probably not for a hand
portable).

Show of hands, please: how many of you have erected a ham antenna that "just couldn't possibly work?" I sure have.
You just don't know until you try it.

I bought an HDTV, which decodes digital signals. What we should be talking about is Digital Television, not necessarily "high definition." Whether or not reception at any given residence will succeed, especially come February 17 (or is it 19?) remains to be, um, seen. Being the antenna experimenter that I am, and knowing that most digital signals are currently UHF, I hooked up an old Radio Shack 2-bay bowtie tabletop UHF antenna, sometimes in conjunction with my rooftop VHF/UHF antenna.

1) The "local" FOX station, which I could never before get at my house, comes through beautifully on its digital channel. Why? Different transmitter and possibly a different antenna location. (I don't know the details.) Their analog main transmitter is located far to my south and I never got any signal. Its translator, at 10 miles and should be visible to me, gives me a visible but lousy signal. So some or all tv stations are or will be doing things differently (power, frequency, location) from their previous analog transmissions.

2) Another station, whose transmitter is located even farther from me than the FOX station, and definitely not line of sight, comes through clearly on its digital station as long as I have the bowties pointed just right... and at a window facing that direction.

Yes, digital television reception is all-or-nothing, but you may be surprised if you find you can get a clear signal that was unattainable before. And yes, the reverse may turn out to be true. It's a situation by situation basis. A blanket statement can't be made.

Question for the moderators:

Is it OK to post to rram an announcement for my local radioclub's
hamfest next January? It will also be the ARRL South Florida Section
Convention.

If OK, would monthly until Dec and then weekly be too much?

In any case, can you suggest other appropriate newsgroups?

Thanks Dick, that is exactly what I have been looking for. It is a
involved system, and I see that the Trellis encoder will attempt to
compensate for some of the data loss. That will help keep some signal on
the screen when there is noise or other interruption. The Trellis
encoder itself reminds me a bit of a Photoshop algorithim I use to do
something similar.

The data interleaver is quite a clever adaptation, splitting,
scrambling and reconstructing of the data stream.

It still relies on a good signal, but should work out well within it's
limits - which appear to be larger than I was originally thinking.

Now on a more Hamish note, is there anywhere on the web that has a
similar description of the D-Star system?

The reason is that "Ground is NOT Ground, the World Around"..... Old
Radioman addage..... Up here in Alaska we rarely have enough Mineralite
in our soils, to produce the conductivity, that makes a reasonable RF
Ground. It is like trying to build an RF Ground when sitting on a piece
of Glass. Most of our acceptable RF Ground Systems are built with
Radials, or Steel Roofs, and the like. Nothing like a nice Tin Roof for
an acceptable RF Ground for a vertical Marconi antenna.

In another thread I posted:
>You can get estimated ground conductivity at
>http://www.fcc.gov/mb/audio/m3/index.html
It shows that a large part of the US has poor ground conductivity.

I live in the desert at NV/CA border, half way between Las Vegas and Death Valley. Very Dry. The soil is a dry lake bed, and ancient sea bed (there was ocean water here at one time; we can find sea shells in the soil), with dried caked silt for hundreds of feet until bedrock. About 2 inches of rain per year, and it just runs off, not sinking in. Thus poor conductivity. The only verticals I use are for VHF and UHF. I use dipoles for HF; no ground plane needed.

HAM RADIO SCOUTING: JOTA PREPARES FOR OUT OF THIS WORLD CONTACTS

The 2008 Scouting Jamboree on the Air is getting prepared for a vicarious ride into space. Amateur Radio Newsline's Mark Abramowicz, NT3V, has the details:

--

As we told you here on Newsline a few weeks ago, Richard Garriott, W5KWQ - the son of retired astronaut Owen Garriott, W5LFL - is scheduled to ride into space as a tourist aboard a Soyuz craft set for an Oct. 12 blastoff.

He's set to dock with the International Space Station on Oct. 14 and expected to get pretty radio-active right away.

We told you of plans to hook up with schools through the Amateur Radio on the International Space Station program.

Now, we have confirmation that the younger Garriott plans to work stations operating on the Jamboree on the Air the third weekend of October.

Wil Marchant, KC6ROL, is one of the volunteers with the ARISS team and helping to coordinate activity.

"Richard is planning on during some of his free time, his limited free time, to try to get around and call CQ to JOTA stations on the normal ISS frequencies, the regional frequencies," Marchant says. "So, that's 145.80 MHz downlink worldwide and then there are a couple different uplinks depending on which region you're in."

Marchant says if you'd like to work Garriott, there is a protocol that has to be followed to make it work.

"You need to wait and not transmit until you hear Richard or one of the other astronauts or cosmonauts call 'C-Q,' " And, when they start talking to somebody else, that means that there's somebody else on the ground that they're trying to listen to.

"And if everybody is yelling, trying to call the space station at that point, it will interfere with that station on the ground and their attempts to finish the QSO. So that the cosmonaut or astronaut can call 'C-Q' again."

Marchant says there's a reason for the protocol.

"One of the things that's very important for people to remember is that the space station is like a repeater that essentially has a large footprint on the ground. So, the space station can hear everybody from a radius of I don't know, probably 500 to 1,000 miles."

Marchant says there's a website you can visit where the ARISS frequencies and lots of other good information can be found.

"I would recommend that people go to ARISS-dot-o-r-g, which is maintained by the Radio Amateurs of Canada in English and there are other ARISS web pages linked from there in other languages," Marchant says. "And, if you go there is information about frequencies and also operational practices."

Marchant says Garriott also is planning extensive use of Slow-Scan TV.

"He's talking about trying to get the Slow-Scan Television system up and running basically very shortly after he opens the hatch," Marchant says. "And he would like to try and leave that running as much as possible when he or one of the other crew members can't be at the microphone. So, hopefully, we'll have lots of Slow-Scan Television activity."

Marchant says there is a place you can go - if you don't have an SSTV set-up to see what's happening.

"We are encouraging amateur radio operators around the world to be prepared to capture Slow-Scan Television images from Richard," Marchant says. "And then we'd like people to submit those to this website so we can collect a gallery of images from around the world during Richard's flight."

The web address is available in the script version of this story on our website. (It's www.amsat.com/ARISS_SSTV)

So, once again, all of you JOTA stations operating the weekend of Oct. 18 and 19, here's a chance to really light up the experience with a contact from space or even hearing Richard in a QSO from space.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.
--

If everything goes as now planned, and all the on-orbit scouting contacts are made with W5KWQ, this will truly be a Jamboree on the Air that will be considered by many to have been out of this world. (NT3V, ARNewsline(tm))

**

HAM RADIO IN SPACE: CHINA TO LAUNCH HAMSAT

China is planning to launch its first-ever ham radio satellite. Michael Chen, BD5RV portable 4 reports that he recently received an update from BA1DU, on the progress of the ham radio bird.

First off, this satellite was originally named CAS-1 but its is now known as XW-1. And XW-1 will carry a beacon and three cross band transponders into space. One is for FM, another is linear, and the last is designed for digital operation.

Plans call for it to be launched into a sun synchronous orbit in June 2009. This, by a CZ-2C rocket from the Taiyuan Satellite Launch Center in North China..

More on this upcoming hamsat launch as information becomes available. (ANS)

**

RADIO LAW: NEIGHBORS AGAIN APPEAL PA TOWER PERMIT

Back on Earth, a Pennsylvania ham's effort to erect a 53-foot tower at his home is facing another challenge from neighbors. Amateur Radio Newsline's Don Carlson, KQ6FM, has the details.

--

Chuck Mills, W3YNI, lives in Irvin, Pennsylvania. And, as previously reported, Mills had faced opposition from nearby residents over his tower that held a properly issued permit.

Some neighbors appealed the issuance of a permit in March, claiming the tower was not properly screened. That appeal was upheld when the zoning hearing board ruled the first permit invalid. But it was re-issued in September. This, after Mills attorney argued his case successfully before the township planning council.

Now, another appeal has been filed in an effort to get the planning council to again reverse itself and take away Mills permit for the tower. A neighbor identified in the Pittsburgh Tribune-Review as John Ducar, told the newspaper and we quote:

"We filed an appeal because we feel the township has not performed its duty in protecting the local community."

Attorney Mike Lazaroff, K3AIR, represents Mills. He calls the latest appeal frivolous. He told the newspaper that it is unfortunate the neighbors have chosen to pursue this issue in what Lazaroff calls an unreasonable manner.

Lazaroff noted that his client has addressed all the concerns raised by the zoning hearing board and that Mills has complied fully with all ordinances. He also notes that Federal preemption order PRB-1 requires that local governments must reasonably accommodate the needs of amateur radio operators for antennas.

But Lazaroff also sounded an ominous note telling the newspaper that it is unfortunate that the neighbors have chosen to embroil the township in a legal battle. One that he says is going to cost the township a lot of money.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM.

--

According to the Pittsburgh Tribune-Review this latest appeal could end up on the agenda when the Penn Township zoning board meets on November 11th. (Pittsburgh Tribune-Review, W3WN, QRZ.COM)

**

RADIO LAW: PA GETS PRB-1 LIKE LAW (UPDATED FROM VERSION ON AUDIO NEWSCAST)

In a related story word that Pennsylvania now has its own PRB - 1 like law pf its own. On Tuesday October 7th, the Pennsylvania House of Representatives passed a measure designed to assure hams in the Keystone state that they will be reasonably accommodated in their quest to install towers and antennas, The measure known as SB 884 garnered 196 yes votes and only one no. With the Pennsylvania Senate having previously passed the bill the completed measure was sent to Governor Edward G. Rendell who signed it into law on Wednesday, October 8th. How this might affect the W3YNI tower case just reported is to early to know. (W3WN, QRZ.COM)

**

THE BPL WAR: RSGB VS. UK TELECOM REGULATOR OFCOM

The Radio Society of Great Britain seems more than a little upset with U-K telecommunications Ofcom, and the reason can be summed up in three letters. B-P-L.

After waiting for nearly two years for a response from Ofcom over the introduction of possibly non compliant power line adapters the RSGB was extremely disappointed to hear the regulatory agency's response. In a nutshell, Ofcom said that it does not intend to do anything about it.

Now, RSGB President Colin Thomas, G3PSM, has written to Ofcom. In it, Thomas states the RSGB's concerns that Ofcom is failing to deliver on its statutory duty of ensuring the optimal use of the electromagnetic spectrum especially in the High Frequency bands.

The RSGB has also told its members that it will continue to pursue Ofcom on this matter. (GB2RS)

**

THE BPL WAR: THE SAGA CONTINUES IN SOUTH AFRICA

Two South African ham radio political leaders have testified in opposition to the introduction of Broadband over Powerline or BPL Internet access in that nation. ZS6AKV, and ZS6BUU, made presentations at the South African telecommunications regulator BPL Hearing held last week. ZS6AKV presented

the South African Radio League's objection to the current draft regulations and ZS6BUU showed how BPL could potentially interfere with the nations emergency communication.

Telecommunications regulator ICASA said that by law it is tasked to protect licensed radio services against interference. It also admitted that it is BPL operators that cause interference. A final decision on the South African BPL rules is due out in a few months. (SARL)

BREAKING DX NEWS: AFGHANASTAN DXPEDITION ON HOLD

Some breaking news in the world of DX. Word that the 2008 Kabul Afghanistan DX operation we reported on last week has been postponed. John Kountz, KE6GFF, tells Newsline that unexpected circumstances preclude the use of T6EE's QTH as a center from which to operate. John says that he feels bad about this disappointment but does look forward to working all of you in the near future from Kabul. (W2VU, KG6GFF)

**

RADIO LAW: DEFENSE ADMITS SKYLAR DELEON KILLED KD7VWJ AND KD7VWK

A strange twist in the trial of the man accused of killing an Arizona ham radio couple to steal their boat. Amateur Radio Newsline's Bruce Tennant, K6PZW has more:

--

On Tuesday, October 7th the attorney for Skylar Deleon said that his client is guilty of those two murders and a third, but shouldn't be put to death. Defense attorney Gary Pohlson said in his opening statement on that his only goal is to save Deleon's life.

Skylar Deleon is accused of the 2004 murders of Thomas and Jackie Hawks, KD7VWJ and KD7VWK, in order to steal their yacht. He is also accused of the 2003 killing John Jarvi from whom he stole thousands of dollars. Deleon has pleaded not guilty to murder and murder for financial gain.

Under California criminal law, having attorney Pohlson admit that his client is guilty of all three murders is not the same as entering a guilty plea. Pohlson said he will dispute some details of the prosecution case. He will likely argue that Deleon should not face the death penalty because others involved will have different outcomes of their cases. He

will instead urge that Deleon be sentenced to life in prison without possibility of parole instead.

Prosecutors are seeking the death penalty for Deleon. They say that he was the mastermind that came up with the plan to kill the Hawks after learning they were preparing to sell their 55 foot yacht. They say Deleon pretended to be interested in buying the nearly half-million-dollar vessel. He then enlisted the help of two men to overpower the Hawks on a demonstration cruise. Deleon then forced the couple to sign over paperwork for the yacht before killing them at sea.

Attorney Pohlson said outside court that he admitted Deleon's guilt to the jury to maintain credibility. This, when he argues that they should spare his client's life. Prosecutors say that they were not surprised by the defense's strategy in the case.

For the Amateur Radio Newsline. I'm Bruce Tennant, K6PZW, following this court case in Los Angeles.

--

Deleon's former wife Jennifer was convicted and sentenced to a pair of life sentences without the possibility of parole. She was found guilty on two counts of first degree murder on November 17, 2006. (Various published news reports)

**

RESCUE RADIO: FOUR CALIFORNIA CITIES TO GO INTEROPERABLE

Palm Springs, California, says that it plans to join with neighboring Cathedral City, Desert Hot Springs and Indio in establishing a new interoperable radio communications system. One that will enable police and fire agencies to stay in contact and work together.

The Palm Springs City Council recently voted to update the city's radio dispatch system and also to form a Joint Powers Agreement with the three other cities to create the Eastern Riverside County Interoperable Communications Authority. An August 2009 target date has been set for the system nicknamed ERICA to be fully operable. (Press release)

**

RESCUE RADIO: FCC TO HOST SPEAKERS SERIES FOR NATION'S FIRST RESPONDERS

The Federal Communications Commission's Public Safety and Homeland Security
Bureau will begin hosting a new speakers series this month. This, to help provide our nation's first responders with the latest news and developments
on public safety communications and related-initiatives. Bill Pasternak, WA6ITF has more:

--

The first in a series of these sessions will be hosted by Public Safety and Homeland Security Bureau. It takes place on Wednesday, October 22, 2008, from 11:00 a.m. to 12:00 p.m. The location is Commission Meeting Room TW-C305 at the agency's Washington D.C. headquarters.

Laurie Flaherty, a Program Analyst for the Office of Emergency Medical Services at the National Highway Traffic Safety Administration, will be the first expert speaker. Flaherty will discuss the U.S. Department of Transportation's role in 911 issues. Her presentation will specifically focus on the work of the Research and Innovative Technologies Administration and recent developments in Next Generation of 911.

The Speakers Series will be open to the public but admittance will be limited to the seating available. For those who want to tune in from home, both audio and video coverage of the meeting will be broadcast live with open captioning over the Internet from the FCC's web page at www.fcc.gov/realaudio.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the newsroom in Los Angeles.

--

The FCC's web cast is free to the public and does not require pre-registration. (FCC)

**

RADIO STATISTICS: MORE FOLKS ON LINE THAN ARE LISTENING IN

There are some new and very interesting statistics as to how much time people like you and I are spending on line, versus listening to radio and watching T-V. Jim Davis, W2JKD, reports:

--

Adults are now are spending more time with the Internet than listening to broadcast radio in the United States. This, according to The Media Audit which reviewed findings of a recent report.

According to the survey, the average adult spends 2 hours and 40 minutes a day listening to radio. This is unchanged from the previous year. It also said about 14% of adults visit a radio Web site in a typical 30-day period many of whom are likely streaming radio content.

But the report also found that adults in the United States spend an average of 3 hours 17 minutes per day online. This, compared to 2 hours 2 minutes per day a year ago. That says the report is a 62% increase and meaning that the Internet represents 29% of the typical media consumption every day for U.S. adults.

But even the Internet is no match for the communications mode that brings you everything from the local news to American Idol. The report ways that adults continue to spend the most amount of time watching television. In fact, United States adults spend an average of 3 hours 42 minutes a day in

front to a television set.

--

The bottom line. Even after all these years and the advent of the low cost personal computer, the American public still prefers that one eyed monster called television over anything else. (RW)

**

HAM RADIO BUSINESS: SPECIAL EVENT STATIONS CELEBRATE QTC MAGAZINE

Three consecutive special event stations are active to celebrate the 200th edition of Poland's QTC Magazine. HF200Q was operational through October 10th. Currently on the bands is HF200T. It goes away on October 20th to be replaced by HF200C which will be handing out contacts through the 31st. The QSL manager for all three stations is SP4KDX. SP2FAP is the publisher of QTC. (DXNS)

**

HAM RADIO BUSINESS: FRANCES MEGAHERTS MAGAZINE GOES QRT

Meantime, another well known ham European ham radio magazine has shut its doors. Jim Linton, VK3PC, has the details:

--

After nearly 26 years Megahertz Magazine of France has closed due to increasing production and distribution costs, and market factors. An editorial by co-founder Sylvio Faurez Feem says internet globalization also dealt a fatal blow by its facilitation of direct equipment imports bypassing and weakening local dealers, that reduced their ability to advertise.

The ham magazine also suffered from pirating, says the editorial, in the form of multiple photocopies of the whole magazine distributed at clubs, readily available scans of coveted articles and duplication of its annual compact disc.

Megahertz was one of France's oldest printed magazines and well respected as a specialist publication by francophone's inside and outside that country.

The editorial also refers to the size of the domestic market with France only having 16,000 radio amateurs out of a population of 65 million.

The demise of the magazine comes after years of rigid financial control but with accumulated losses and ever increasing costs its closure was a fait au compli.

For the Amateur Radio Newsline, I'm Jim Linton VK3PC

--

Frances' Megahertz is not the only amateur radio magazine to fold its tent and disappear in the night. It was preceded back in the 1980's by the United States based Ham Radio Magazine and later on by Australia's Amateur Radio Action. More recently in October 2003 73 Magazine closed its doors here after 43 years and over 500 editorials by the magazines founder Wayne Green, W2NSD. (WIA News)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RADIO EDUCATION: A NEW MORSE TRAINER FOR PC BY ZL1AN

If you are a no-code ham or an SWL and want to learn C-W, have we found a neat way to assist you. It's a new Morse teacher program from ZL1AN, that can be can be downloaded from the New Zealand Amateur Radio Transmitters ham radio society website. Its really neat. Take a listen as we play with its speed control from about 20 down to 5 words per minute:

In playback mode you can vary the speed from 3 to 30 words per minute. You can also set the output frequency of the audio the from 500 to 1000 hertz and the Farnsworth character separation speed from 12 to 35.

The program runs in Windows and has already received rave reviews. Many are saying that it is the best "teach-yourself-Morse" program yet developed or that they have ever seen. You will find it in cyberspace at: http://www.nzart.org.nz/nzart/exam/morse.html) (NZART)

**

NAMES IN THE NEWS: PEHA NAMED CHIEF TECHNOLOGIST AT THE FCC

Jon M. Peha, Ph.D., has been named Chief Technologist of the Federal Communications Commission.

Peha is currently serving as a professor in the Departments of Engineering and Public Policy, and Electrical & Computer Engineering at Carnegie Mellon University. He also serves as the associate director of the Center for Wireless and Broadband Networking at C-M-U. Prior to joining Carnegie Mellon, Peha served as the Chief Technology Officer of three high-tech start-ups, He has also been a member of the technical staff at Stanford Research Institute International, AT&T Bell Laboratories and Microsoft.

Peha will serve as a senior advisor on communications technology in the FCC's Office of Strategic Planning and Policy Analysis. His research interests include technical and policy issues related to computer and telecommunications networks. (FCC, RW)

**

NAMES IN THE NEWS: IZ7KHR ANED 2008 YOUNG HAM CONTEST WINNER

And 20 year old Francesco Cozzi. IZ7KHR, of Bari, Italy, has been chosen as the winner of the Young Ham Contest Program for 2008. As his prize, IZ7KHR gets to take part in the CQWW SSB contest from the famed Jamacian 6Y1V contest super-station with all expenses paid.

Cozzi is a member of the Italian RadioHams Association and the World Wide Young Contesters group. He is described as a student and is active in many areas of amateur radio, including contesting, DX'ing and volunteer emergency services.

According to David Kopacz, who is the owner if 6Y1V, Cozzi speaks English quite well. He also loves to cook and believes it is every hams social responsibility to spread international good will.

The 6Y1V contest super station is owned by K1LZ and KY1V and is located at the home of at the home of George Campbell, 6Y5GC, in Hopewell Jamaica. David Kopacz says that he and his contest group are proud to have been granted the opportunity to make Francesco's dream come true. (Various DX sources)

**

WORLDBEAT - SOUTH AFRICA: SARL CANCELS TAKE AMATEUR RADIO TO SCHOOL PROGRAM

Some sad news from South Africa. That's where the recently proposed 'Take Amateur Radio to School' children's educational curriculum has been cancelled.

The South African Radio League announced its decision to abandon the program on October 8th . This after it was found that there was due to the lack of interest in setting up amateur radio stations in that nations schools .

The South African Radio League says that its essay competition in which a student can win an Acer laptop will continue. It's also announced a new closing date of November 15th for this years competition to end. (SARL)

**

WORLDBEAT UK: NEW D-STAR REPEATER IN THE UK

Another D-Star repeater has taken to the air in the United Kingdom. GB7ZP is a new D-Star repeater in Essex. The input frequency is 430.4875MHz and output frequency is 439.4875MHz. Initial operation is local RF only, with the internet Gateway facility to be added at a later date. (RSGB)

**

ON THE ROCKS: 2008 ORIONIDS SHOWER EXPECTED TO BE BIG

If you are a ham who chases rocks flaring across the sky, there's some good news. After the successful 2006 and 2007 outbursts, predictions say that

this years Orionids Meteor activity will again be much higher than normal.

According to the Make More Miles on VHF newsletter, while the "traditional
"
peak for this shower is expected on October 21st. However, another maximum, related to the encounter with an ancient dust trail rich in bright meteors is expected to occur on October 19th, between 02:13 and 08:08 UTC.

For those not aware, hams involved in Meteor Scatter communications make contacts by bouncing their signals off the ionized trails of meteors as the burn up in the Earth's atmosphere. (VHF Reflector)

**

DX

In DX, word that the United States Fish and Wildlife Service has selected a group of United States lead hams to lead a DXpedition to Desecheo Island in early 2009. Desecheo currently sits at number 7 on DX Magazine's Most Wanted list. The group is headed up by DXpedition veterans Bob Allphin, K4UEE, and Glenn Johnson, W0GJ.

Also, news that F5TLN, will be portable Oh-D-5 in the Lebanon until February of 2009. He will work mostly in SSB but also some CW on all HF bands. The operator is Sylvain who says that he will confirm the QSL cards after his return home and points out that bureau QSLs will take some time.

And word that a YL-only DXpedition will take place from the Falkland Islands between January 17th and the 31st of 2009. The team will be using 80 through 10 meters and the ladies will have individual callsigns in the range of VP8YLA through VP8YLZ. Thevexact calls will depend on the number of operators who sign on for the operation. Originally 14 hams had signed up to go but a few have pulled out for various reasons. More is on-line at www.radioclubs.net/aa_vp8yl_/

And news that DJ1OJ will spend the winter on Teneriffa in the Canary Islands. He was slated to arrive in early October and remain there until the end of March 2009. While there, he will be active as EA8OM mainly in CW and RTTY. QSL to the bureau, to his home call or electronically via Logbook to the World.

A0VDV is reported on from Curacao in the Netherlands Antillies. He's scheduled to be there until October 29th operating C-W only. If you make contact, QSL direct or via the bureau.

Lastly, K5LBU, is planning a DXpedition to Lesotho for July or August of 2009 and is still looking for some participants. If you are interested to join the team please contact Frosty via e-mail to frosty1(at) pdq (dot) net.

THAT FINAL ITEM: THE END OFF A HAM BROADCAST ERA

And finally this week, the Radio Society of Great Britain says 73 to a ham who has been reading their GB2RS newscasts for over a half a century. Jeramy Boot, G4NJH, has a bit of history and some words of praise for a truly dedicated UK ham:

--

GB2RS News was first broadcast on Sunday 25 September 1955 from the station of Frank Hicks-Arnold G6MB on 3600kHz using voice amplitude modulation. What is less well-known is that the RSGB had been in discussions with the UK regulator, then the General Post Office, for some time about the feasibility of such a news service for UK radio amateurs.

As part of its practicability evidence for the GPO, some experimental broadcasts were arranged by the RSGB on 40 metros. These test transmissions took place from the station of Jimmy Porter GI3GGY, in Londonderry during 1954 using his own callsign.

The GPO then agreed initially to the news taking place in the 80 meter band on Sundays using the callsign GB2RS. A year later they permitted these bulletins to be broadcast on 40 meters as well and these were put out by GI3GGY using the GB2RS callsign. GI3GGY has been involved ever since, and he has thus been a GB2RS news reader for more than 50 years - longer than anyone else.

Earlier this year Jimmy's massive HF type LPH9 16-element log periodic antenna was severely damaged by gales. The antenna tower was some 90 feet high. Jimmy has been unable to get the structure repaired and has therefore, reluctantly, stated that he wishes to stand down as an HF news reader.

The RSGB wishes to pay tribute to Jimmy's dedication as a news reader over more than 50 years, and also thank his assistant reader June, GI4MJD, for acting as back up. They will continue to read the local news on 2 meters FM for the Londonderry area.

Im Jeremy Boot, G4NJH, and you are listening to the Amateur Radio Newsline.

--

To which we want to add our congratulations to Jimmy Porter, GI3GGY, on a job truly well done. (GB2RS)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,

Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Damron, N8TMW, saying 73 and we thank you for listening.

==> ARRL AUCTION: GETTING DOWN TO THE WIRE

Excitement continues to build as the ARRL gets ready to preview items for the Third Annual On-Line Auction on Thursday, October 16 <http://www.arrl.org/auction>. With almost 140 items up for bid -- with more being added every day -- this event promises to have something for just about everyone. The auction kicks off October 23 and runs until October 31 on the ARRL Web site.

This year's auction will again include many transceivers and other items that have appeared in the QST Product Review column and have thus been thoroughly tested by the ARRL Lab. ICOM has generously donated an

IC-7000 HF/VHF/UHF mobile transceiver; this rig was reviewed in the May 2006 issue of QST <http://www.arrl.org/members-only/prodrev/pdf/pr0605.pdf>.

A new donor to the ARRL On-Line Auction is R4 Systems <http://www.r4systems.com/> -- developers of the Proteus Design Suite, a suite of tools for professional printed circuit board design -- has donated a Proteus Suite software package.

According to ARRL Chief Operating Officer Harold Kramer, WJ1B, "Last year's online auction -- our second -- proved to be a successful and enjoyable event for both hams and ARRL staff members alike. When the bidding ended, we realized that we had sold 162 items and sold just more than $50,000 worth of merchandise." Proceeds from the auction benefit ARRL education programs including activities to license new hams, strengthen Amateur Radio's emergency service training, offer continuing technical and operating education, as well as create instructional materials.

Many vintage items will also be offered. Returning by popular demand are four ARRL Lab unique "junque" boxes. With a starting bid of $50, these boxes are filled with components, parts and electronic do-dads. No one -- except the ARRL Lab staff -- knows what exactly is inside each box, but each is guaranteed to be full of things that the Lab staff considers valuable (but keep in mind that they collect just about anything).

All product review items in the On-Line Auction will include a link to a PDF file of the actual Product Review, as well as a reference to the QST issue that the review appeared in.

ARRL Business Services Manager Deb Jahnke, K1DAJ, said that there are "loads of neat stuff" available in the Auction, including a set of Dayton Hamvention pins going back to 1995, gift certificates for ARRL merchandise and publications, radios, books and much more. "We'll be adding items throughout the preview period, so keep checking back to find things you might have missed," she said. "This event would not be possible without the generosity of our many corporate donors. Our sincere thanks go to all who donated items for this year's auction."

Jahnke also advised auction users to look through the "Help" and "About Us" sections, where you'll find useful information about bidding, FAQs and a host of other facts. "To ensure an enjoyable experience, please be sure to read all policies in the 'About Us' section," she said.

==> SPECTRUM DEFENSE: "MORE WORK TO DO"

Defending and enhancing access to the Amateur Radio spectrum is the primary mission of the ARRL. According to ARRL Chief Executive Officer David Sumner, K1ZZ, the League has not only protected the bands, but has also added several new ones, despite exponential growth in the variety and number of radio frequency devices in the hands of consumers and businesses. "Even our most disappointing defeat -- the loss of the bottom 40 percent of the 220 MHz band some two decades ago -- gave us

upgraded status, from shared to exclusive, in the remaining 60 percent of the band," he said.

Sumner said that amateurs will soon have cause to celebrate: March 29, 2009 marks the date that high-powered international broadcasting stations will be removed from the heart of the 40 meter band. "We are working with the broadcasters to make sure the change takes place as agreed at the 2003 World Radiocommunication Conference (WRC)," Sumner said. "While it's probably too much to expect 100 percent instant compliance, we know that the responsible broadcasters are preparing to move out of the 7100-7200 kHz segment -- doubling the size of the worldwide 40 meter band and making this popular band more useful than it's been in 70 years."

At the WRC in 2007, the Amateur Radio Service earned its first low-frequency (LF) allocation, 135.7-137.8 kHz; however, here in the United States, amateurs will not gain access to this new band automatically when the Final Acts of the conference take effect on January 1, 2009. "We must petition the FCC to implement the allocation, and we know the petition will not be granted without an argument -- because we've been down this road before," Sumner explained. "Twice in the past, the ARRL has sought an LF allocation. Both times our request was opposed by the Utilities Telecom Council (UTC) -- the same organization that has opposed our efforts to protect radio services from Broadband over Power Lines (BPL) <http://www.arrl.org/tis/info/HTML/plc/> interference."

Sumner recounted that the ARRL's fight against BPL interference has been going on for six years. "Last year, in the wake of Federal Communications Commission decisions that did not adequately protect licensed radiocommunication services from interference from BPL systems, the ARRL even went to court to challenge the FCC and won!" he said <http://pacer.cadc.uscourts.gov/common/opinions/200804/06-1343-1112979.pdf>. "On April 25, the United States Court of Appeals for the District of Columbia Circuit confirmed what the ARRL has been saying for years about how the FCC was handling the BPL interference issue: FCC prejudice tainted the rulemaking process."

On July 9, the Court went one step further, ordering the FCC to pay the ARRL more than $6000 toward the League's costs in pursuing the appeal. "While this is a tiny fraction of our total investment," Sumner said, "the award affirmed that -- contrary to the 'spin' the FCC had been trying to give to the Court's decision -- the ARRL substantially prevailed in its appeal."

Calling the Court's decision "a tremendous victory for radio amateurs and other licensed users of the radio spectrum -- indeed, for anyone who cares about the federal administrative process," Sumner said that the remand does not guarantee that the FCC will correct its errors. "We face another round of technical arguments," he said. "No doubt the FCC's technical staff, many of whom want to do the right thing, will remain under heavy pressure to ignore the laws of physics and give preference

to wishful thinking once again. When the FCC reopens the BPL proceeding as the Court has ordered, we must leave no room for these technical issues to be settled on anything other than technical grounds. There's more work to do. It is only through the support of thousands of ARRL members and friends that we have managed to come this far. But it took great effort, including our frontal assault on the flawed FCC proceedings, to get their attention. Together we can celebrate all that we have accomplished on the BPL front over the past six years!"

BPL is not the only challenge facing the League, Sumner said, pointing out that preparations for the upcoming WRC in 2011 are already underway. The key WRC-11 issues for Amateur Radio are:
* A possible allocation near 500 kHz. This would provide amateur's first access to the lower part of the medium frequency (MF) band. Sumner said a "600 meter" band offers exciting possibilities for reliable groundwave communication through the application of digital signal processing techniques to a portion of the spectrum that is as old as radio itself.
* Defense against a push to allocate spectrum between 3 and 50 MHz for oceanographic radar applications.
* Support of an initiative to provide better protection for radio services against interference from short-range radio devices.
* Consideration of regulatory measures for software-defined radio and cognitive radio systems, which offer both opportunities and threats to existing radio services.
* Selection of agenda items for the WRC to follow (tentatively planned for 2015).

"ARRL staff and volunteers are hard at work on your behalf, teaming up with International Amateur Radio Union (IARU) volunteers from around the globe to build the strongest possible case for Amateur Radio at WRC-11," he said, calling on all amateurs to help protect Amateur Radio's precious spectrum. "Once again, your financial commitment to spectrum defense is vital to our ability to protect your access to radio spectrum. Your contribution to the 2009 Spectrum Defense Fund will provide the financial resources required for us to represent you at WRC-11, and to respond when the FCC reacts to the BPL remand decision."

To help in the ARRL's ongoing mission to protect our valuable spectrum, please visit the ARRL Office of Development's Web page. You can also reach ARRL Chief Development Office Mary Hobart, K1MMH at 860-594-0397 or via e-mail <k1mmh@arrl.org>. New special gifts are being offered for contributions, including a new 2009 mug and pin. More details on thank you gifts can be found on the donation form for the Spectrum Defense Fund.

==> LOOK FOR THE NOVEMBER ISSUE OF QST IN YOUR MAILBOX

The November issue of QST is jam-packed with all sorts of news and information today's Amateur Radio operator needs. From product reviews to experiments to public service, the upcoming issue of QST has something for just about everyone.

Earl Schlenk, W0ES, dissects "The Anatomy of a Homebrew Project." In this article, Schlenk offers that you don't have to have a degree in engineering to build your own gear, just a little patience and a desire to have some fun. Steve Gradijan, WB5KIA, gives readers a look at "Greening Up Your Station" with tips to make your shack more energy efficient as well as environmentally friendly -- save a bit of green by going green!

Are you just itching to put up that antenna support structure, but aren't too sure how to go about it? Find out how Stephen Rudin, W1WSN, and Kris Merschrod, KA2OIG, used education and cooperation to secure permission to build their structures in "Overcoming Antenna Restrictions." Journey to Italy with Norm Fusaro, W3IZ, Assistant Manager for the ARRL's Membership and Volunteer Programs Department, in his article "Pizza, Macaroni, Contest."

ARRL Contest Branch Manager Sean Kutzko, KX9X, in his column "This Month in Contesting," points out that Contesting and Emergency Communications have more in common that you might think. And now that the 2008-2009 Contest season is in full swing, catch up on all the upcoming contest activity with this month's "Contest Corral."

If you're looking for a way to regulate your battery voltage while in the field, be sure to check out October's Product Review: QST Contributing Author Phil Salas, AD5X, gives his take on battery boost regulators from TG Electronics and MFJ Enterprises. In his review, Salas says "Either of these battery boost regulators will help you get more operating time from your mobile or portable transceiver as battery voltage sags. There are some differences between the units, so take a close look when deciding which is right for your application."

This issue also boasts the results of the ARRL's Third Annual Photo Contest. With more than 60 submissions (our most ever!), the judges had a difficult choice in selecting the best ones. November's cover features three winners, with the other winners inside.

Of course, the November issue includes the variety of columns you know and love: "Hints & Kinks," "The Doctor Is IN," "How's DX," "Eclectic Technology," "Technical Correspondence," "World Above 50 MHz," "Hamspeak" and more. Look for your November issue to arrive soon. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please visit the ARRL Web page <http://www.arrl.org/join>.

==> PENNSYLVANIA BECOMES 27TH STATE WITH PRB-1 LAW ON BOOKS

On Wednesday, October 8, Pennsylvania Governor Edward G. Rendell (D) signed into law a bill that guarantees radio amateurs the right to erect antenna support structures up to 65 feet without the need for a Special Use Permit. The bill passed in the House with a vote of 196-1; it passed in the Senate with a vote of 49-1. The new law is scheduled to go into effect December 8, 60 days after signing.

Senate Bill 884 (now Act 88), "An Act amending Title 53 (Municipalities Generally) of the Pennsylvania Consolidated Statutes, Restricting Municipalities from Regulating Amateur Radio Service Communications," was first introduced on June 1, 2007 by Pennsylvania Senator Stewart J. Greenleaf (R) who represents portions of Bucks and Montgomery Counties. The bill requires local municipalities to "reasonably accommodate amateur radio service communications, and [to] impose only the minimum regulations necessary to accomplish the legitimate purpose of the municipality" and says that "[n]o ordinance, regulation, plan or any other action shall restrict amateur radio antenna height to less than 65 feet above ground level, [but a] municipality may impose necessary regulations to ensure the safety of amateur radio antenna structures, but must reasonably accommodate amateur service communications." The text of the bill may be found here <http://www.legis.state.pa.us/cfdocs/legis/PN/Public/btCheck.cfm?txtType=HTM&sessYr=2007&sessInd=0&billBody=S&billTyp=B&billNbr=0884&pn=2433>.

The driving force behind the bill's passage was George Brechmann, N3HBT, of Warminster. "We didn't have a PRB-1 law and I just got tired of people telling me it couldn't be done," he told the ARRL. "So I called up my senator's local office and told them what I wanted. They referred it to his Harrisburg office and a while later, I got a call from Senator Geeenleaf's executive assistant Eric Pauley wanting more information."

Brechmann said the bill was stuck in committee "for the longest time, with lots of back-and-forth. Fortunately, they were able to reach a compromise with the help of the League and its General Counsel Chris Imlay, W3KD. This act even encompasses the urban areas of Philadelphia and Pittsburgh." Brechmann, who has a 60 foot crank-up tower in his backyard, says he has no plans to get a taller antenna support structure.

Brechmann said he found out about the bill's passing in the most appropriate of ways -- on the radio. "I'm the trustee at the club station, K3DN, at our senior center; we have about 130 members there. I went over on Tuesday evening to unlock the doors and get the rigs going, when my wife Elaine, N3TMP, called me on the radio to tell me the bill had passed the House. Five minutes later, she called me again on the radio to tell me it had passed the Senate! And now the governor signed it as soon as it reached his desk."

Saying that getting this bill passed is his "little contribution to posterity," Brechmann said he is glad to be able to do something good for the amateur community "because they have been so very good to me. I'm blind, and Amateur Radio has been a very large part of my life." Brechmann stays active ragchewing on 15 meters "and 10 when it's open," as well as serving as Net Control and coordinating his township's public service events.

ARRL Eastern Pennsylvania Section Manager Eric Olena, WB3FPL, said he was "thrilled" with the bill's passage: "The Pennsylvania Legislature showed overwhelming support of Amateur Radio [by passing this bill]. This legislation was started by George and coordinated with Senator

Greenleaf and Representative Kathy Watson (R). Pennsylvania hams made an outstanding effort contacting their senators and representatives [in support of the bill]. By seeking their support, they really helped with the success of this legislation. The effort by all hams throughout the country to foster Amateur Radio as an effective communications method in emergencies did much to highlight a valued reputation for Amateur Radio, and without a doubt, had an effect on these proceedings."

==> AMERICAN HAMS TO LEAD 2009 DXPEDITION TO DESECHEO ISLAND

The US Fish and Wildlife Service (FWS) has selected a group of hams led by veteran DXpeditioners Bob Allphin, K4UEE, and Glenn Johnson, W0GJ, to lead a DXpedition to Desecheo Island, KP5 (IOTA NA-095), in early 2009 <http://www.fws.gov/caribbean/Refuges/Desecheo/default.htm>. Desecheo currently sits at number 7 on DX Magazine's Most Wanted list <http://hamgallery.com/countries/>.

Desecheo is a small uninhabited island in the Mona Passage, 14 miles off the western coast of Puerto Rico. It is part of the FWS's national wildlife refuge system administered by the Caribbean National Wildlife Refuge Complex (CNWR) <http://www.fws.gov/caribbean/>.

Johnson told the ARRL that about eight years ago, a group of DXers wanting to activate Navassa and Desecheo Islands formed an organization, the KP1-5 Project <http://www.kp1-5.com/>. According to its Web site, "The purpose of the KP1-5 Project is to work toward a solution to the closure of Desecheo and Navassa Islands to Amateur Radio operators by achieving lawful, periodic access to these islands pursuant to US Fish and Wildlife Service authorization. While operating from these islands is a worthwhile goal, the KP1-5 Project is dedicated to a long term partnership that jointly benefits the US Fish and Wildlife Service and Amateur Radio operators worldwide."

In 2005, H.R. 1183 was introduced in the US House of Representatives <http://bulk.resource.org/gpo.gov/bills/109/h1183rh.txt.pdf>. This bill, while not specifically mentioning Amateur Radio operations, would require "limited public access to the Desecheo and Navassa national wildlife refuges." While this bill did not become law, the KP1-5 Project continued to negotiate with the FWS, seeking permission to mount a DXpedition and activate Desecheo Island. Through these negotiations, the FWS, by way of the CNWR, invited written proposals from groups interested in activating the island.

In June 2008, CNWR invited written proposals from hams who had previously made inquiries about an Amateur Radio operation from Desecheo; CNWR indicated that they would allow one group to activate the island. After reviewing the proposals, CNWR would then select a group and prepare to issue a Special Permit to the successful party, limiting the group to no more than 15 people staying no longer than 14 days. Applicants had 45 days to prepare and submit their proposals. According to Allphin, seven groups submitted proposals.

The CNWR also stated certain conditions that would have to met to be considered for selection, such as completing unexploded ordnance awareness training (Desecheo has been used in the past by the US Air Force as a bombing range and for survival training), prior experience conducting a DXpedition from a natural resource area and other sites, removing all refuse from the island and locating all transmission equipment and camping facilities within 200 feet of the cement helipad on the island. According to the solicitation letter, CNWR personnel will make periodic compliance checks during the stay.

"A panel of three Fish and Wildlife Service employees, from areas within the Service outside of the Caribbean refuge, spent September 24 & 25 reviewing and evaluating the [seven] proposals," Allphin said. "The selection criteria used were those outlined in the proposal invitation letter. Points were awarded for how well criteria were addressed for thoroughness and documentation. USFWS has not announced the actual dates of the operation yet, but the DXpedition is expected to take place between January 15 and March 30, 2009. A Special Use Permit will be issued as per USFWS regulations." Allphin said he expects that the DXpedition team and DXers worldwide will have a minimum of 30 days' notice prior to the start of the trip to Desecheo.

"It was truly an honor to have our proposal and team selected from the stiff competition," Johnson told the ARRL. "This has been a true team effort on our part from the start. We look forward to activating an entity in the Top 10 Most Wanted that is located in our own back yard!"

According to ARRL Membership and Volunteer Programs Manager and experienced DXpeditioner Dave Patton, NN1N, both Desecheo and Navassa Islands (currently third on DX Magazine's Most Wanted list) saw frequent operations in the late 1970s through late '80s, but operations from the islands have been very limited since then. With the islands under the control of the US Fish and Wildlife Service, combined with decaying "infrastructure" on Navassa, there are more issues that must be dealt with than there were 25 years ago.

"A well-organized and lengthy operation from Desecheo will be a nice treat for the world's DXers," Patton said. "With W0GJ and K4UEE leading the operation, I think we can all count on a first class effort that will give maximum exposure to Asia/Oceania and Europe where KP5 is most needed. I also think that Glenn and Bob can demonstrate to the Fish and Wildlife Service that a DXpedition can take place and not damage the environment or cause big problems amongst other hams or for other agencies. I hope hams will be invited back to Desecheo more frequently in the future and expand the places where hams may operate."

Dennis Motschenbacher, K7BV (ex-KZ5M), fondly recalled his part in the Texas DX Society's 1985 DXpedition to Desecheo, telling the ARRL what made his time there so special: "KP5 -- what incredible memories for me. It was my first 'classic' DXpedition; meaning putting a tiny island on the air after landing on the beach in a small boat and hauling all the gear up the rocks. This one took 24 hours of manual labor to get everything from the small beach, over the rocks, and to the operating

area -- quite a task for a bunch of guys that spent more time behind a desk than they did at the gym! To this day, I have never had the pleasure and excitement of working down huge pileups like we experienced on KP5 -- I can still hear them in my ears. I know that Bob, Glenn and their crew will do a fantastic job lowering this Top 10 rare one down the needed list. I am so happy for each and every operator going in 2009. I know in my heart this will be a trip that even the most well-traveled of them will remember for the rest of their lives.

In 1979, upon the recommendation of the DX Advisory Committee (DXAC), Desecheo Island was added to the DXCC list for contacts made after March 1 of that year. KP4AM/D -- with operators N4EA, KP4Q, N4ZC, KP4DSD, KV4KV (now KP2A), KP4AM (now W4DN) -- made the first DXpedition Desecheo in March 1979. Various groups have made their way to Desecheo since the first trip, but other than a brief operation in December 2005, there has been no activity from the island since 1994.

According to DXCC Manager Bill Moore, NC1L, the lack of activity is due to the FWS not issuing the needed Special Use permits. "The FWS has always claimed safety concerns as a reason to not issue the permits," he said. "Since the island was used as a bombing range, there is the possibility that unexploded, live munitions are still on the island. It is always a good thing when an entity that had activation difficulties in the past gets on the air again."

==> GARRIOTT GEARS FOR SPACE JOURNEY

On Sunday, October 12, Richard Garriott, W5KWQ, is scheduled to begin his journey to the International Space Station (ISS) as he blasts off into space via a Russian Soyuz and docks with the ISS two days later; he is due to return to Earth on Thursday, October 23. Richard, the sixth private citizen to be accepted by the Russian Federal Space Agency (RKA) for a short-term mission on the ISS, is the son of Owen Garriott, W5LFL. In 1983, Owen was the first ham to make QSOs from space. Richard said he plans to build on his father's legacy by also making QSOs from the ISS: He plans to perform several school contacts and downlink slow scan television images during his flight, as well as contact the general ham community in his free time and perform random scout contacts during Jamboree on the Air (JOTA) <http://www.arrl.org/scouts/jota/>.

According to ARRL Amateur Radio on the International Space Station (ARISS) Program <http://www.rac.ca/ariss/oindex.htm> Manager Rosalie White, K1STO, excitement is building for this launch. "Richard and Owen have been working as a team to plan how to cram in all of the objectives Richard hopes to achieve in space, including scientific experiments.

Through White, Richard and Owen sent this message for all hams: "We are both very pleased and appreciative of the ARISS and ARRL support in making the voice and SSTV ham operations more fun, interesting to the public, and valuable for research on Richard's flight this October. One of the most exciting aspects of living and working in space is the chance to look back at the Earth. Owen had one of the first

opportunities to do this 35 years ago on Skylab. He also had the first opportunity to talk with the ham community from space 25 years ago aboard [NASA shuttle mission] STS-9. Richard now has the opportunity to connect with the ham community almost exactly 25 years after his father's shuttle flight and 35 years after Skylab. One of Richard's primary objectives with his flight is to photograph the Earth 35 years after the first orbital laboratory and look for changes on the Earth in the intervening time."

"While Richard is at the ISS window, he will be operating the amateur SSTV equipment and sending its images down to hams around the world. These downlinks can then be sent to an ARISS central repository for delayed and wider use. We further expect to be able to compare many of the images with near simultaneous, handheld, high resolution digital photo images.

"We are very excited to share this experience with the Amateur Radio community, and thank our fellow hams for their support of this project."

According to AMSAT Vice President of Operations Drew Glasbrenner, KO4MA, AO-51 will be operated in a special mode this weekend in preparation for Richard's Slow Scan Television (SSTV) operations. "Since Richard wants to experiment with the SSTV equipment on the ISS, a test will take place with AO-51 configured with dual repeaters. This will be during October 11 and 12," he said.

"The primary repeater on AO-51 will be configured with an uplink on 1268.700 FM and downlink of 435.300 FM, and will be designated for this period as an SSTV repeater," Glasbrenner reported. "Users are encouraged to exchange SSTV images in ROBOT 36 mode, as an opportunity for others to practice receiving SSTV images from space before the ARISS activity."

The ARISS Team requests that the images hams transmit be related to space and to the ROBOT 36 mode. As always, Glasbrenner said, "good Amateur Radio practice -- including cooperation in sharing the uplink -- is crucial to the success of this test mode." Glasbrenner said that there will be a QRP voice repeater running concurrently on 145.880 FM uplink and 435.150 FM downlink. Users are asked to use 10 W or less, and omnidirectional or handheld antennas only.

As Richard gets ready for his voyage, he only had kind words to say about the amateur community: "I am very impressed with the ham community and ARISS and how well it puts together such complicated activities! I am very excited about my ham radio part -- I hope to perform well."

==>SOLAR UPDATE

Tad "When clear October suns unfold" Cook, K7RA, this week reports: A familiar sight appeared this week, as a sunspot emerged for one day, then was gone. Based on its magnetic polarity and high position in our Sun's southern hemisphere, sunspot 1003 was a new Solar Cycle 24 sunspot; like all the other recent sunspots, it was short lived. For October 10-17, the US Air Force Space Weather Operation predicts the

planetary A index at 5, 5, 15, 10, 5, 5, 5 and 5. Over the same period, Geophysical Institute Prague predicts quiet conditions today, October 10, unsettled October 11-12, quiet to unsettled October 13 and quiet again October 14 to 16. Sunspot numbers for October 2-8 were 0, 0, 12, 0, 0, 0 and 0 with a mean of 1.7. The 10.7 cm flux was 66.3, 67.2, 66.6, 67.4, 67.2, 66.7 and 67.7 with a mean of 67. The Estimated planetary A indices were 12, 13, 11, 4, 4, 3 and 2 with a mean of 7. The Estimated mid-latitude A indices were 11, 10, 8, 3, 3, 1 and 2 with a mean of 5.4. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Flexmore Hudson's "Mallee in October."

==>IN BRIEF:

* This Weekend on the Radio: This week, the 10-10 International 10-10 Day Sprint and the NCCC Sprint are October 10. The YLRL Anniversary Party (SSB) is October 10-12. On October 11, be on the lookout for the FISTS Fall Sprint and the EU Autumn Sprint (CW). The Makrothen RTTY Contest, the Oceania DX Contest (CW) and the Pennsylvania QSO Party are October 11-12. The North American Sprint (RTTY), the SKCC Weekend Sprintathon and the UBA ON Contest (SSB) are October 12. The NAQCC Straight Key/Bug Sprint is October 15. Next week is the ARRL EME International Competition on October 18-19 and the ARRL School Club Roundup from October 20-24. The NCCC Sprint is October 17 and the Feld Hell Sprint is October 18. Look for the JARTS WW RTTY Contest, the ARCI Fall QSO Party, the Worked All Germany Contest, the Stew Perry Topband Challenge, the W/VE Islands QSO Party, the PODXS 070 Club 160 Meter Great Pumpkin Sprint and the 50 MHz Fall Sprint to be on the air October 18-19. The Asia-Pacific Fall Sprint (CW) and the UBA ON Contest (2 Meters) are October 19. The Illinois QSO Party is October 19-20 and the Run for the Bacon QRP Contest is October 20. The SKCC Sprint and the RSGB 80 Meters Club Sprint (SSB) are October 22. The NCCC Sprint is October 24. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration remains open through Sunday, October 26, 2008, for these online course sessions beginning on Friday, November 7, 2008: Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Technician License Course (EC-010); Analog Electronics (EC-012), and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives,

informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Book on Amateur Radio's "Golden Age" Now Available from ARRL: Many consider 1930 to 1980 as the "golden age" of American radio technology. A time of extraordinary innovation driven by pioneering engineers and entrepreneurs, this 50 year span saw the introduction of rigs that would become famous throughout the world. The newest addition to the ARRL Library, "50 Years of Amateur Radio Innovation -- Transceivers, Receivers and Transmitters: 1930-1980," highlights these treasured favorites in a way that has never been seen before. This book takes you on a guided tour of more than 400 of these legendary radios, lovingly restored by their owners and gorgeously photographed by Joe Veras, K9OCO, a professional photographer and Amateur Extra class ham. The images presented in the book represent more than 200 photo sessions and nearly 500,000 miles of travel. "You find yourself leafing through the pages and blurting out, 'I owned one of those!' at regular intervals. I had to laugh out loud when I saw the photo of the Gonset Communicator II transceiver, complete with its cyclops 'eye tube.' That was my first 2 meter rig," said ARRL Publications Manager and QST Editor Steve Ford, WB8IMY. Whether you've been licensed for many years or are just starting out in Amateur Radio, "50 Years of Amateur Radio Innovation" offers a fascinating visual travelogue of Amateur Radio technology. Each photo includes a brief description of the radio, model number, manufacturer, as well as the year it was introduced and its selling price at the time. "50 Years of Amateur Radio Innovation -- Transceivers, Receivers and Transmitters: 1930-1980" <http://www.arrl.org/catalog/?item=0228> is hardcover and 128 pages. It is available from the ARRL Web site and dealers for $39.95. If you order before November 30, 2008, you will receive a free 2009 ARRL Calendar <http://www.arrl.org/catalog/?item=0302> featuring the vintage radio photography of Joe Veras, K9OCO.

* ARRL Book Released in China: The first of several ARRL books to be translated and published in Chinese has just been released. "Getting Started with Ham Radio" by QST Editor Steve Ford, WB8IMY, published by Posts and Telecommunications Press (PTPress) of Beijing, People's Republic of China, is the first of eight books that will be published in that language. Other ARRL titles to be translated and published in the PRC include "The ARRL Handbook," "ARRL Antenna Book," "Experimental

Methods in RF Design," "Understanding Basic Electronics" and "Ham Radio on the Move." Posts and Telecommunications Press is one of the largest Chinese print and electronic media publishers. It is a specialized publishing house operating under the management of the Ministry of Information Industry. At present, PTPress annually publishes 3600 book titles in 10 categories such as communications, computers, electronics and electrical engineering technology. "Getting Started with Ham Radio" was translated and adapted for its Chinese audience by Zhang Hong, BG1FPX.

* ARRL Invites Nominations for 2008 International Humanitarian Award: Nominations are open for the 2008 ARRL International Humanitarian Award <http://www.arrl.org/FandES/field/awards/humanitarian.html>. The award is conferred upon an amateur or amateurs who demonstrate devotion to human welfare, peace and international understanding through Amateur Radio. The League established the annual prize to recognize Amateur Radio operators who have used ham radio to provide extraordinary service to others in times of crisis or disaster. A committee appointed by the League's President recommends the award recipient(s) to the ARRL Board, which makes the final decision. The committee is now accepting nominations from Amateur Radio, governmental or other organizations that have benefited from extraordinary service rendered by an Amateur Radio operator or group. Amateur Radio is one of the few telecommunication services that allow people throughout the world from all walks of life to meet and talk with each other, thereby spreading goodwill across political boundaries. The ARRL International Humanitarian Award recognizes Amateur Radio's unique role in international communication and the assistance amateurs regularly provide to people in need. Nominations should include a summary of the nominee's actions that qualify the individual (or individuals) for this award, plus verifying statements from at least two people having first-hand knowledge of the events warranting the nomination. These statements may be from an official of a group (for example, the American Red Cross, The Salvation Army or a local or state emergency management official) that benefited from the nominee's particular Amateur Radio contribution. Nominations should include the names and addresses of all references. All nominations and supporting materials for the 2008 ARRL International Humanitarian Award must be submitted in writing in English to ARRL International Humanitarian Award, 225 Main St, Newington, CT 06111 USA. Nomination submissions are due by December 31, 2008. In the event that no nominations are received, the committee itself may determine a recipient or decide to make no award. The winner of the ARRL International Humanitarian Award receives an engraved plaque and a profile in QST and other ARRL venues.

* Singapore to Make Temporary Licenses Available for Visiting Hams: On Thursday, October 9, the Singapore Amateur Radio Transmitting Society (SARTS) <http://www.sarts.org.sg/> -- that country's IARU Member-Society -- announced that the Infocommunications Development Authority (IDA) would begin issuing temporary Amateur Radio licenses for visiting hams; the IDA is the agency responsible for Amateur Radio licenses in

Singapore. According to SARTS Vice President Peter Cook, JV1PC, visiting hams should apply three weeks before arriving in Singapore. The license, typically valid for a three month period at a cost of 50 Singapore dollars (or $25 for VHF/UHF-only operation), would use the call sign 9V1/home call (for example, 9V1/K1SFA). "The Singapore administration's accommodation of visiting radio amateurs will be greatly appreciated by many who visit and pass through this busy city-state," said IARU Secretary David Sumner, K1ZZ. "Congratulations to the Singapore Amateur Radio Transmitting Society for achieving this long-sought objective." Check the IDA Web site for the application process and necessary forms <http://www.ida.gov.sg/doc/Policies%20and%20Regulation/Policies_and_Regulation_Level2/Guidelines%20on%20Licensing%20Scheme/GuideAmateur.pdf>.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org
==>ARRL News on the Web: <http://www.arrl.org>

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change

your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or

members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should

not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including | MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting | to receive many article submissions asking about free or low-cost | alternatives for accessing Usenet newsgroups such as ours. We initially | permitted this topic in light of the significant impact to many of our | readers due to this loss of access through their ISP's. However, this | subject is arguably off-topic for our newsgroup, is better answered by | other sources, and better discussed in other venues. Because of this, | we will no longer approve submissions that request or suggest where to | obtain access to Usenet newsgroups. For more information about this | topic, please consult the following: |

- The last approved thread of discussion about this topic on our |
newsgroup from October 2008: |

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/19770b88ec527aff/8dcee92de293f615?hl=en#8dcee92de293f615 |

One piece of good news......

At our vacation place (pretty "fringy") I >>always<< could see some TVI on the analog TV when I got on 40M. Put on a digital converter (same TV receiver/same antenna) and the digital channels survive crystal clear.

73, de Hans, K0HB

1051. Those pesky newcomers...

Beginners, QRM and Rstrictions

By James O. Wood

"Much is said about beginners these days in conjunction with QRM on various popular DX bands. The Old-Timer has perhaps forgotten the day he went into the R.I.'s office, drew a diagram of a simple crystal detector and spark or possibly a one-tube receiver and Hartley, read a bit of code, was almost invariably hand an amateur ticket; he did his own share of pestering those who were before him until he got enough actual operating experience to qualify as one of the gang."

Interestingly enough, this if from a February 1935 edition of QST.

We're ALWAYS going to hear complaints about the new comers, or noobs as the younger crowd calls them.

James went on to suggest letting the noobs jump right in to the fray as it were rather than restricting them to portions of the bands. Well, I guess he should be pleased, "incentive licensing" completely with Novice Bands have come and gone.

Amateur Radio Newsline(tm) Report 1627 - October 17, 2008

Amateur Radio Newsline report number 1627 with a release date of Friday, October 17th, 2008 to follow in 5-4-3-2-1.

The following is a QST. W5KWQ comes on the air from space and the world of amateur radio is there to great him. Also, India says that ham radio should be taught in school and those radio tagged migratory birds need you. Find out the details on Amateur Radio Newsline(tm) report number 1627 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: RICHARD GARRIOTT W5KWQ OPERATES ON-ORBIT

The son of famed ham radio space pioneer Owen Garriott, W5LFL, is now on the International Space Station and on the air. A Russian Soyuz spacecraft carrying Richard Garriott, W5KWQ, arrived at the space station at 08:26 UTC on October 14th and was soon heard on the air. Amateur Radio Newsline's Mark Abramowicz, NT3V, has the details:

--

Richard Garriott, W5KWQ, has made it to the International Space Station high above the Earth.

And since his Oct. 14, arrival, he has been busy making amateur radio contacts across the globe.

Some say the excitement and enthusiasm surrounding this mission almost rivals that of his father, Dr. Owen Garriott, W5LFL, the first ham who made contacts from space as an astronaut

Here's a sample of an exuberant Richard Garriott speaking with youngsters during a school contact arranged through the Amateur Radio on the International Space Station Program.

--

Richard Garriott audio: Hear it in the mp3 version of this weeks newscast at www.arnewsline.org.

--

Well, it didn't take long for Garriott to jump onto the radio after a welcome aboard from cosomonaut Sergei Volkov, RU3DIS.

Stan Vandiver, W4SV, in Hanna, Indiana, had his recorder going as Garriott conducted his first QSO with Randal De Priest, N4AC, in Cummins, Georgia. Here's the space to Earth side of that QSO:

--

Richard Garriott audio: Hear it in the mp3 version of this weeks newscast at www.arnewsline.org.

--

Garriott stayed on for more than one stateside QSO.

Here's his contact with Warren Nuckols, W4TNJ, in Chester, Virginia. Again the audio from the ISS was recorded by Stan Vandiver and again you will hear only the voice of Richard Garriott from space:

--

Richard Garriott audio: Hear it in the mp3 version of this weeks newscast at www.arnewsline.org.

--

Within hours of climbing aboard, W5KWQ began sending slow scan amateur television pictures to stations on the ground. All of the photos were transmitted on 145.800 MHz FM and can be viewed at the ARISS Slow Scan gallery.

That URL is simply www.amsat.com/ARISS_SSTV/

And yes that is a dot com rather than the usual AMSAT dot org.

By way of background, Garriott, is a computer game developer who paid $35 nillion dollars for his trip to space. Traveling with him to the space outpost were U.S. astronaut Michael Fincke, KE5AIT, and Russian cosmonaut Yury Lonchakov, RA3DT. Fincke will serve as commander of the six-month Expedition 18 mission which will focus on preparing the station to house six crew members on longer-duration missions.

W5KWQ will return to Earth on Friday October 24th with the space station's outgoing crew aboard a Soyuz re-entry vehicle.

Until then, keep an ear open for many more voice QSO's, your Slow Scan TV equipped radio set to 145.8 MHz and an eye on the special AMSAT SSTV gallery. This, for a lot more ham radio from W5KWQ on board the I-S-S.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, following the story from Philadelphia.

--

As an aside, once the hatches between the Soyuz capsule and the I-S-S were opened Sergi Volkov, whose cosmonaut father was orbiting the earth when the Soviet Union collapsed in 1991, welcomed Garriott with a hug. NASA says that they are first children of previous space adventurers to meet in orbit. (ARNewsline(tm) from various sources)

**

RADIO WAVES: A NEW CYCLE 24 SUNSPOT APPEARS

Some encouraging news for DX'ers and any ham who hopes to one day work some distant contacts. Whats being called a 'new-cycle' sunspot belonging to Solar Cycle 24 has shown itself near the stars northeastern limb. The new spot, now designated as SSN 1005 was reported over the weekend of the 12th and 13th making this the third time in as many weeks that a new-cycle sunspot has interrupted the year's run of blank solar activity.

The accelerating pace of new-cycle sunspots is viewed an encouraging sign by astronomers and hams alike. For radio amateurs, it seems to be saying that while solar activity remains very low, the sunspot cycle is unfolding more or less normally. In other words, we are not stuck in a prolonged solar minimum. At least we hope its not.

More about this new sunspot and overall solar activity is on line at www dot spaceweather dot com. And remember that Spaceweather is spelled as one word. (Southgate, Spaceweather)

**

RESTRUCTURING: INDIA HAM RADIO LEADER SAYS RADIO SHOULD BE TAUGHT IN SCHOOL

The chairman of India's Gujarat Institute of Amateur Radio says that the government should incorporate radio communication as an optional subject in schools and colleges.

S. K. Nanda whom QRZ.com lists as VU3BVD, says that having radio communication as a subject in educational institutes will help develop people's interest in ham radio. This he says should result in more people joining the hobby, which will result in more operations in the amateur radio spectrum and better connectivity.

Nanda, who is also the Principal Secretary of the group made the comment while addressing a gathering of amateur radio operators in the city of Gandhinagar. (Yahoo News)

**

RESCUE RADIO: GLOBAL SET 08 ON NOVEMBER 8

The next Global Simulated Emergency Test will take place on Saturday, November 8th. The operation will take place from 04.00 to 08.00 UTC on and near the established emergency communications Center-of-Activity frequencies on 80, 40, 20, 17 and 15 meters. The exact frequency will be determined after the start of net operations based on band activity and local QRM.

The objectives of the test are to increase interest in emergency communications and to test how usable the Center-of-Activity frequencies are across all ITU regions. It's also meant to create practices for international emergency communication and rehearse the relaying of emergency communications messages using all modes permitted to radio

amateurs world-wide..

Please remember that this is not a contest. Rather it is an emergency communications preparedness activity. A list of participating stations will also be available at www.raynet-hf.net. (Various)

RESCUE RADIO: SIMULATED QUAKE IN THE GREAT AMERICAN SOUTHWEST

A simulated emergency test centering around an earthquake near Tecopa, California, has shown the value of having a well trained corps of ham radio volunteers. Don Carlson, KQ6FM, is in Reno with more on the event and those taking part:

--

According to news reports, the simulated emergency was set up to test emergency preparedness in Nye County Nevada. And so it was that moments after a simulated 6.2 earthquake hit, ham volunteers were on the air notifying other radio amateurs to meet immediately at the Nye County Emergency Services Operations Center .

By 7:30 a.m., volunteers were in the training room and heading out to strategic areas around town. Seventeen operators covered 7 locations in and around the town of Pahrump. Among them were Andy Gudas, N7TP and Archie Selbach, KE7IOE, who established a communications presence in Amargosa. Meantime, Richard Gamble K7RTG set up a shelter at Manse Elementary School, while Ron Daviau, KC7YMH, did the same at Rosemary Clarke Middle School. Other hams were assigned to the Pahrump Senior Center, the Nye County Sheriff's Office and the Saddle West Casino and Hotel.

Gerald Fuge, KC6ILH, is the Southern Nye County Emergency Coordinator. He directed the exercise from the emergency services communications office. That's also where Carol and Steve Bird, KE7KHD and KE7KHE who worked the radios, relaying messages from the field to other emergency organizations. For this training exercise the group was supporting the communities of Amargosa Valley, Crystal, Beatty and Tecopa, as well as Pahrump.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

--

Press coverage in the Pahrump Valley Times praised the hams for helping to organize the exercise as well as knowing exactly how to respond in a crisis situation. (Pahrump Valley Times, others)

RESCUE RADIO: HAM TO HAM CONTACT LEADS TO SEA RESCUE

A Coast Guard crew rescued an unnamed boater who ran out of fuel as he sailed from Hawaii to California. Early on Tuesday, October 7th the crew aboard the cutter Halibut out of in Marina del Rey, California, found the sailor about 100 miles off the coast.

According to the Daily Breeze newspaper, the mariner was traveling on his 44-foot boat when he ran out of fuel. He reportedly used his amateur radio gear to contact another radio amateur in Florida, who in turn contacted the Coast Guard in California. It in turn dispatched the Halibut.

The cutter located the marooned vessel and towed it closer to shore. It was then transferred to a 47-foot motor lifeboat crew from the Channel Islands station.. The names and calls of the hams involved in the rescue were not reported. (Daily Breeze)

**

HAM IN ACCIDENT: WINAPRS WRITER HURT IN BALOON CRASH

One person has been killed and a well known ham radio operator critically injured in a hot air balloon crash at the Albuquerque International Balloon Fiesta on Friday, October 10th. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the latest:

--

Killed in the crash was Stephen Lachendro, of Butler, Pennsylvania. Keith Sproul, WU2Z, was critically injured in the accident when the 'Wings of Wind' balloon hit powerlines near the festival grounds just North of the city.

According to news reports, there were gusty winds as the two balloonists were trying to land. From pictures taken by attendees, it appears as if the basket carrying the men caught fire after hitting the power lines, separated from the balloon envelope and fell to the ground.

First responders reported that Lachendro was found lying on the side of a ditch after falling 45 feet to his death. Sproul who was reportedly piloting the balloon jumped some 60 feet from the burning gondola. W-U-2-Zed was unconscious when he was found and was flown by helicopter to a local hospital where he was admitted in critical condition. Reports say that he suffered a broken leg and hip, punctured lungs and burns to his face.

Keith Sproul is the twin brother Mark Sproul, KB2ICI. The two are best known in ham radio circles as the co-authors of the popular WinAPRS, MacAPRS and X-APRS APRS is the multi-faceted position reporting system

originally developed bt Bob Bruninga, WB4APR. It allows the monitoring of real time geographical information such as the position of vehicles, the status of weather, radio direction finding and much more.

According to a National Guard spokesman at the scene, the National Transportation Safety Board will investigate this latest crash.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles..

--

The International Balloon Fiesta, held each October, is Albuquerque's pre-eminent tourist draw, but this is not the first accident that has happened at the event. In 2007 a 60-year-old California woman fell to her death and three other women were hospitalized after their balloon snagged a power line. In 1982, four people died when propane tanks on a large balloon exploded. Other fatalities were recorded in 1990, 1993 and 1998. (WA5WHN, Published news reports)

**

RADIO LAW: THE NEW PENNSYLVANIA TOWER LAW

A follow-up now on the good news that Pennsylvania hams received last week. This after Governor Edward G. Rendell signed into law a bill that guarantees radio amateurs the right to erect antenna support structures up to 65 feet without the need for a Special Use Permit.

The bill passed in the Pennsylvania House with a vote of 196-1 and the states Senate with a vote of 49-1. Governor Rendell signed it on Wednesday, October 8, with it scheduled to go into effect December 8th. That's the normal 60 days after signing.

Originally called Pennsylvania Senate Bill 884 it was renamed to Act 88 after its passage. And according to the ARRL, it requires local municipalities to reasonably accommodate amateur radio service communications, and to impose only the minimum regulations necessary to accomplish the legitimate purpose of the municipality. The act also says that no ordinance, regulation, plan or any other action shall restrict amateur radio antenna height to less than 65 feet above ground level.

There is only one caveat. It says that a municipality may impose necessary regulations to ensure the safety of amateur radio antenna structures. Even so, the measure still requires that the governing body reasonably accommodate amateur service communications.

The measure was first introduced on June 1, 2007 by Pennsylvania Senator Stewart Greenleaf. He represents portions of Bucks and Montgomery Counties. (ARRL, others)

**

TELECOM CRIME: COPPER THEFT DOWN-UNDER

Copper thefts continue world-wide. Now an entire neighborhood has been put in the dark by the wire villains. It happened down-under. Amateur Radio Newsline's

--

Police in Brisbane, Australia are investigating the theft of ï¿½live' copper
wire from a street in the Richlands area of the city. We are talking about an active power distribution line which had the potential to cause fatal injuries to members of the public or to the thieves themselves.

Sometime between 5pm on September 26th and 8am October 2nd thieves removed electrical cabling and wiring from a housing estate in an area called Richlands. Approximately 100 meters of fully powered copper wire was stolen from three electrical poles, with another two poles sustaining damage.

Electrical provider Energex located exposed live wiring inside one pole that had the potential to deliver a fatal electric current should it have been mishandled. Burn marks located inside another of the metal poles indicated that the thieves were lucky to have escaped unscathed.

Im Jim Damron, N8TMW, reporting.

--

Here in the United States several want-to-be copper thieves have been injured or killed attempting the same type of crime. Even so the bad guys continue to risk their lives for the few pennies that the stolen copper wire will bring as scrap. (WIA News)

**

RADIO THINGS: SCOTT FYBUSH 2009 TOWER SITE CALANDER

A photo calendar for 2009 with hams and SWL' in mind -- and broadcast Band DX'ers as well. That may be the best way to describe a rather impressive calendar that shows some very impressive transmission towers as photographed by veteran radio writer Scott Fybush.

In his travels Fybush has photographed hundreds of towers. This includes tall towers, to some downright pretty towers. He also has taken photos of funny-shaped towers like the very rare Blaw-Knox diamonds as used by Nashville's famed WSM and WLW as well as towers in spectacular locations. Now, he is making some of his best photos as part of his own Tower Site 2009 Calendar.

The Tower Site Calendar 2009 features 14 full-color, high-quality images of transmitter sites in all corners of the United States and Canada. Sites pictured include WNYM in New Jersey, KNBR in San Francisco to CFFX in Kingston, Ontario Canada to mention only a few. This photo calendar sells for under $19, with more information on-line at www.fybush.com /calendar.html (RW)

HAM RADIO IN SPACE: RUSSIA TO LAUNCH SOUTH AFRICAN HAMSAT

South Africa's second satellite will be launched from the in the December to March time frame. This, with word that SumbandilaSat, will go into space on board a Russian launcher in Kazikstan.

SumbandilaSat was first scheduled for launch on a Sthil rocket from a Russian submarine. Due to political issues between various departments in Russia the plan was aborted and the satellites sponsors began a search for a new launch opportunity.

Some concerted behind the scenes diplomatic talks resulted in the Russians agreeing to honor the contract and shift the launch to Baikonur. This is the same launch complex where, Earth's first artificial satellite, Sputnik 1was launched. (SARL)

**

WORLDBEAT - UK: ICOM DONATION SUPPORTS GRAMMAR SCHOOL

Icom UK has donated the latest digital radio to the United Kingdom's Chatham House School. The transceiver will allow students at the school to communicate with other radio users around the globe using a sophisticated mix of digital amateur radio and Internet communications technology.

The Chatham House is grammar school in Ramsgate that specializes in teaching mathematics, science and computer technology. The radio will be used by the School's Amateur Radio Club, M0DLI, run by their Science Teacher, John Hislop, G7OHO. Hislop is credited with having successfully tutored 14 students for their UK Foundation class ham radio tickets. (Southgate)

**

WORLDBEAT - SOUTH AFRICA: HAMS ASSIST IN CELL JAMMING CASE

Ham radio is assisting in an investigation of illegal iuse of cellphone jamming gear by tow truck operators in South Africa. This, after allegations appeared in that nations main stream media that some of Cape Town's tow truck drivers are almost certainly using sophisticated cell phone jammers to ensure that accident victims cannot contact other tow truck drivers or even emergency services.

According to research by a member of the Cape Town Amateur Radio Center, cell phone reception is compromised at the scene of car accidents whenever certain tow truck operators arrive. A member writes in the Amateur Radio Center's latest newsletter that the objective of this jamming appears to be very simple. No cell phone access means no alternative help can be summoned. This in turn forces victims are forced to use the towing services that are jamming the cellphones.

Andre van der Merwe is the national chairman of the South African Towing and Recovery Association. He says that he had no doubt that some operators were using cell phone jamming equipment and urged motorists to report drivers scrambling cell phone signals. (SARL, Southgate)

**

ON THE AIR: K7BV TO AGAIN VISIT SAN ANDRES ISLAND FOR 6 METER OPERATION

On the air, word that Dennis Motschenbacher, K7BV, will again return to the San Andres Islands and be active as 5J0M. This, between June 19th and July 5th, 2009.

Dennis will again be concentrating on 6 meter Sporadic E skip contacts but will be on the high Frequency bands as well. If you are lucky enough to work him next summer, QSL direct to W1JJ via the QRZ.com address. For more details and update, visit the following Web page at www dot qth dot com slash k7bv slash caribe2009.

And less we forget, for those not aware, Dennis Motschenbacher. K7BV, is Executive Vice President of North American Amateur Sales for Vertex Standard. They are the fine people who bring us all Yaesu brand ham radio gear. (OPDX)

**

DX

In D-X, word that JK1KSB, will be active as 8Q7SO from Mirihi Island. This, between October 26th and November 1st. His operation will be holiday style on 80 through 10 meters using CW, SSB, RTTY and PSK31. QSL via JK1KSB, either via the bureau or to the address on QRZ.com.

7L1FPU, 7L1FFH and AH0BR will be active as AH0BT between November 8th and 9th. The trio plan to be active in Japan's International DX Phone Contest as a multi-single entry. QSL via 7L1FPU.

JJ2NYT, will be active from Easter Island as CE0Y through October 19th. Operation will be on 40, 20, 17 and 15 meters using CW, SSB and RTTY. QSL via his home callsign.

ON7YK, will once again be active as from Gambia as C56YK through November 9th. His activity will be on 80 through 10 meters using CW, SSB, RTTY and PSK31. He ays he will try to activate 160 meters as well. For more details and updates, visit www dot on7yk dot net on the World Wide Web.

Lastly, keep an ear open for a team of Italian who are now active as 9L1X from Sherbro Island and will be on through October 23rd. QSL direct only to I2YSB.

(Above from various DX news sources)

**

THAT FINAL ITEM: RADIO ORIENTEERING: IN SEARCH OF MIGRATORY BIRDS

And finally, we all know that fall is here and North American. This means that migratory birds are heading south to find winter homes. Ham radio operators are keeping track of some of them. You could help in this scientific study, which is going on right now. Amateur Radio Newsline's Joe Moell K0OV has the details.

--

For the second year, ham radio operators and VHF monitoring enthusiasts are assisting in scientific studies of the Loggerhead Shrike. Researchers from a university in Canada have placed radio tags on twenty of these endangered birds, which were part of a captive breeding program. The primary purpose of the tags has been to determine dispersal patterns, which are the movements the birds make immediately after leaving their nests.

But there is also hope that more may be learned about the birds' fall migration journey. Scientists think that they will fly south to Florida, but they might also overwinter in Tennessee, North Carolina, and states just south of there.

If you live in the target area, please get the list of tag frequencies, which are between 172 and 173 MHz, and listen for the brief pulse signals. The list is at www.homingin.com. Other articles at that site will provide hints on listening gear and identification of radio tag signals. Please listen now, because migration is under way and the radio tag batteries will only function for the next six weeks.

Again, the frequencies are at www.homingin.com, where homingin is spelled as one word. From southern California, where I'm getting ready to announce the 2009 USA ARDF Championships very soon, this is Joe Moell, K0OV for Amateur Radio Newsline.

--

Joe adds that T-hunting tagged migratory birds is a scientific project that any ham or SWL can be a part of. (K0OV, ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline(tm). I don't think anyone should be please that he ARS has been so much
pain without learning much it seems about people.

of course the difference is today the newcomers (something I am often
still called after 10 years) is we have enough self confidence (or
whatever) to jump in without waitng to asked and knowing already that
some OT are goingto be whining about us

I think you missed the point Andy, James said that we were
ALL newcomers at one point and that we should offer help and
assistance to the "new guys".

And my point behind posting this bit of ancient trivia was
simply to point out that no matter how things change, some
things remain the same.

==> CITY OF MANASSAS TAKES OVER BPL SYSTEM FROM PRIVATE COMPANY

Late last month, the Manassas, Virginia City Council voted 4-2 to assume control of the Broadband over Power Lines (BPL) service from the private company that serves approximately 675 residents. As a result of the vote, the City of Manassas will now have to use monies from an enterprise fund -- around $110,000, in addition to the approximately $640,000 the city has already spent on BPL infrastructure -- to fund the service and recoup the cost from the subscribers; monies in an enterprise fund come from the utility's ratepayers. BPL technology uses the electricity grid in a city and the wiring in individual homes to provide direct "plug in" broadband access through electricity sockets,

rather than over phone or cable TV lines. Because BPL wiring is physically large, often overhead and extends across entire communities, these systems pose a significant interference potential to over-the-air radio services, including Amateur Radio.

According to "BPL Today," "Manassas was the first city in the world to have BPL deployed to all its residents and has been a demonstration center for utilities, integrators/operators and government entities from around the globe." It was in Manassas that then-FCC Chairman Michael Powell and then-Federal Energy Regulatory Commission (FERC) Chairman Pat Wood announced completion of the FCC's BPL rules and FERC's support for FCC jurisdiction over BPL before the October 2004 meeting at which the BPL rules were finally adopted, prompting an ARRL complaint <http://www.arrl.org/news/stories/2004/10/13/1/>. "BPL Today" is a weekly journal for the BPL industry.

The City of Manassas launched a field trial to test out BPL technology in July 2002; 15 months later, they awarded a 10 year franchise to Prospect Street Broadband. This company agreed to expand the field trial and offer high speed Internet service to the entire Manassas community via power lines. In April 2004, the city terminated its contract with Prospect Street and puts the contract out for rebidding. At this point, the City of Manassas had spent $140,000 in BPL equipment to serve 200 accounts.

In March of 2005, Manassas reported that it had signed up more than 200 customers for BPL services, with another 1300 on a waiting list. Manassas officials said they "expect[ed] to spend [another] $500,000 enhancing its telecommunications and electrical infrastructure by the time COMTek completes the installation [later that month]."

In October 2005, COMTek, based in Chantilly, Virginia, announced the first city-wide BPL service in Manassas. According to COMTek, the City of Manassas -- located 30 miles southwest of Washington, DC -- had the potential for more than 12,000 residential and 2500 commercial subscribers. In May 2006, Philadelphia-based GridPlex announced it would acquire Manassas' BPL program from COMTek.

In May 2006, "BPL Today" reported that GridPlex had the goal of "growing the deployment into a state-of-the-art smart grid including a wide range of municipal applications such as electricity demand response, energy and water conservation, security monitoring and many more." GridPlex also announced plans to upgrade and modernize the network in Manassas, including the provision of smart meters.

In July 2008, the Manassas City Council held a public hearing concerning GridPlex's takeover of the BPL system. The Director of the City of Manassas Utility Department, Mike Moon, told the council that the cost for BPL services -- currently $28.95 per month -- could be lowered and said GridPlex had plans to improve connection speeds. Moon did not give a timetable for when the change would take place, but said subscribers would be notified when it was to occur. No one at the hearing spoke in

favor or against the provider change.

Moon said that if GridPlex acquired COMTek, this would permit city residents to utilize GridPlex's smart grid technology, allowing them to tap into "cost effective, conservation encouraging technology." Residents could keep track and control their consumption of water and electricity on a daily basis. "We are in discussions with [GridPlex] on using those services, but we're not to the point of making that final decision," he said. "That's a $4-5 million project for us, so we have to make sure it's the right company, the right business plan for the city."

At the Council meeting in September, Moon explained that GridPlex's takeover of Manassas' BPL system -- scheduled for early August 2008 and postponed many times -- would not occur. According to the meeting minutes, "The inability of GridPlex to take over the COMTek franchise has made it necessary for [Manassas] to assume the operation of the BPL system and the current customer base, which consists of approximately 675 residents. The City must now purchase all assets owned by COMTek and will then exercise a short-term service agreement to service existing accounts." Speaking for Moon, Manassas' Utilities Deputy Director (Electric) Gary Paulson told the ARRL that the cost of the assets totaled approximately $110,000. "This includes all the hardware, software and licenses needed to operate the BPL system," Paulson said.

Four members of the six member Council voted to take over the BPL service. According to Kipp Hanley, a reporter for the "News and Messenger" daily newspaper in Manassas, this means the city will have to use a small percentage of its electric department reserve fund to pay for the service for the next six months. After six months, Hanley told the ARRL, it will be up to the Council if they want to include it in the city budget.

One reason to keep the BPL technology, he said, is Advanced Metering Infrastructure (AMI) via the smart grid, something that the Manassas utility department has advocated. Moon said that his office is also looking at other ways to carry AMI, such as wireless. This was put out to bid in September 2008.

Manassas Vice Mayor Andy Harrover was one of the four who voted to take over the service from COMTek. Harrover told the "News and Messenger" he voted in the affirmative as a "common courtesy for those who use the service and for the future of the AMI system," but said he has a "fundamental problem" with the city providing Internet services. "The philosophical question is should the city be in the Internet business and the answer is no."

Councilman Jonathan Way was one of two members who voted against taking over COMTek's services. "If we really feel compelled to compete, we should do so with modern, fast and reliable technology," he told the "News and Messenger." "The current operator of the BPL system cannot make a go of it and wants out. There should be a lesson hiding somewhere in that fact."

==> GET READY FOR THE 51ST JAMBOREE ON THE AIR THIS WEEKEND

When Scouts want to meet young people from another country, they usually think of attending a World Jamboree. But each year, many Scouts and Guides "get together" over the airwaves for the annual Jamboree-on-the-Air (JOTA) <http://www.arrl.org/scouts/jota/>. This year, JOTA celebrates its 51st anniversary. JOTA follows a 48 hour schedule beginning at 0000 (local time) on Saturday, October 18, continuing through 2400 local time on Sunday, October 19.

JOTA is an annual event in which Boy and Girl Scouts and Guides from all over the world speak to each other by means of Amateur Radio. Since the first Jamboree-on-the-Air was held in 1958, millions of Scouts have met one another through this event. Many contacts made during JOTA have resulted in pen pals and links between Scout troops that have lasted many years. With no restrictions on age or on the number of participants, JOTA allows Scouts to contact each other via ham radio. Many Scouts and leaders hold licenses and have their own stations, but the most participate in JOTA through stations operated by local radio clubs and individual radio amateurs.

There are many resources available on the ARRL's JOTA Web site for Scouts to use as they prepare for JOTA <http://www.arrl.org/scouts/jota-resources/>. Scout leaders can also access the ARRL's Scouting Web pages that list resources to help teach the Radio Merit Badge, conduct a foxhunt, build an antenna or provide other activities to explore the excitement of Amateur Radio <http://www.arrl.org/scouts>.

Last year, the ARRL introduced a JOTA feature that proved to be such a success that the League is bringing it back for this year's event. The JOTA Storyboard is a place where Scouts from all over the world can post stories and pictures on how they participated in their JOTA activities. Let other Scouts read your stories and catch the excitement of Amateur Radio and Scouting <http://www.arrl.org/scouts/jota/Stories>.

Stations that participate in JOTA should call "CQ Jamboree," or answer stations doing so. Any authorized frequency may be used. The World Scout Bureau recommends that stations use the agreed World Scout Frequencies:
* 80 meters -- 3.690 and 3.940 MHz (SSB), 3.570 MHz (CW)
* 40 meters -- 7.090 and 7.190 MHz (SSB), 7.030 MHz (CW)
* 20 meters -- 14.290 MHz (SSB), 14.060 MHz (CW)
* 17 meters -- 18.140 MHz (SSB), 18.080 MHz (CW)
* 15 meters -- 21.360 MHz (SSB), 21.140 MHz (CW)
* 12 meters -- 24.960 MHz (SSB), 24.910 MHz (CW)
* 10 meters -- 28.390 MHz (SSB), 28.180 MHz (CW)
* 6 meters -- 50.160 MHz (SSB), 50.160 MHz (CW)

In addition to local Scouts getting on the air for JOTA, national Scouting associations around the world fire up their rigs for the event, too. National organizations that have participated in JOTA in recent years include:
* HB9S -- World Scout Bureau, Geneva Switzerland

* K2BSA -- Boy Scouts of America National Office, Dallas, Texas
* JA1YSS -- Boy Scouts of Nippon National Office, Tokyo, Japan
* PA6JAM -- Scouting Nederland National Station, Sassenheim, Netherlands

* 5Z4KSA -- The Kenya Scouts Association, Paxtu Station, Nyeri, Kenya
* VK1BP -- The Scout Association of Australia National Station,
Canberra, Australia
* GB2GP -- The Scout Association, Gilwell Park, London, United Kingdom
* XE1ASM -- Boy Scouts of Mexico
* DX1BSP -- Boy Scouts of the Philippines
* TF3JAM -- Scouts of Iceland

JOTA is not a contest; the idea is not to contact as many stations as possible during the weekend. Radio operators run their stations in accordance with their national licensing regulations. Check the ARRL Web site for a review of control operator rules <http://www.arrl.org/FandES/field/regulations/fd-control.html>.

All groups participating in JOTA are asked to send a report of their activities to their National JOTA Organizer (NJO) and to the ARRL JOTA Desk <jota@arrl.org> after the event (find the name and e-mail address of your NJO at <http://home.hetnet.nl/%7Ekava04un/Jota/njolist.PDF>). NJOs then forward their national JOTA reports to the World Scout Bureau for the "World JOTA Report," published by the World Scout Bureau <http://home.hetnet.nl/%7Ekava04un/Jota/library.htm>.

Although the worldwide JOTA is organized in October, Scouts can meet on the air at other times during the year. Regular Scout nets (a pre-arranged time and frequency when operators meet) are organized nationally or regionally. An updated list of these nets can always be found in the latest "World JOTA Report."

AMSAT-NA has announced that they are again supporting JOTA by dedicating AO-51 operation to the event <http://www.amsat.org/amsat-new/echo/>. According to AMSAT Vice President for Operations Drew Glasbrenner, KO4MA, the satellite will be configured as a single channel V/U repeater. He asks that users limit QSOs to those between or involving at least one JOTA station during this weekend. The frequencies used for this weekend will be 145.880 FM uplink, and 435.300 FM downlink, no PL tone required. The mode change should occur at around 0000 UTC on the 18th (Friday evening in the US) and run for approximately 48 hours.

Bernie McClenny, W3UR, of "The Daily DX" <http://www.dailydx.com/>, reports that the following DX stations will be on the air for JOTA:
* The Tunisian Scout Amateur Association (CAST) will be on the air with the following stations on October 17-19: 3V8SM (Djerba Island AF-083); 3V8CB; 3V8SQ, Monastir, and 3V8ST, Tunis. QSL via the bureau. Do not send dollars or other money.
* David Hutchinson, GI4FUM/EI4DJ, is expected to begin in Swaziland as 3DA0DJ on October 17, with activity until the October 27. He will use 3DA0SS (Swazi Scouts) during JOTA. He will be operating from a station in Hawane.

* The Yongsan US Military Garrison, HL9BSA, in South Korea, will be on from Camp Humphreys in Pyeongtaek, South Korea during JOTA. McClenny said they will be on 10-40 meters on CW, SSB and limited satellite operations (and possibly RTTY). Both American and Korean hams plan to operate. Send QSLs via Harry Rudolph, WX8C <http://www.qrz.com/detail/WX8C>, or direct.
* In Egypt, hams will be using special call SU8JOTA at the Cairo International Scout Centre. Activity will be on the HF bands on CW and SSB, including 160 meters and their VHF network to EchoLink. Send QSLs via Said Kamel, SU1SK <http://www.qrz.com/detail/SU1SK>.

US Boy and Girl Scouts who participate in JOTA may purchase a JOTA patch to wear on their uniforms. These patches are available from the respective Scouting organizations, not the ARRL. Information on purchasing the patches can, however, be found on the ARRL's JOTA Web page.

==> FOURTEEN NEW SECTION MANAGERS MEET IN NEWINGTON

The 16th annual New Section Manager Workshop October 10-12 afforded 14 new SMs a chance to visit ARRL Headquarters and gain some perspective on their new leadership positions. During the weekend gathering, participants not only got to meet many HQ staffers but learned some of the ins and outs of how to become effective section leaders and administrators.

The workshop also provided an opportunity for those taking part to chat among themselves or within the group, sharing their own views on various issues and exchanging ideas. Through training and orientation sessions conducted by ARRL staff members and by meeting with other Section Managers, participants were able to explore what works as well as what does not and to bring home some fresh ideas, plus some encouragement.

On Friday, October 12, Field Organization Supervisor Steve Ewald, WV1X, led the Section Managers on a tour of Headquarters where they met staff and visited W1AW, the Hiram Percy Maxim Memorial Station. The visiting Section Managers enjoyed the chance to operate from W1AW in their spare time during the weekend.

ARRL Membership and Volunteer Services Department hosted the event. Several HQ staff members led training sessions during the weekend workshop, giving the new Section Managers an opportunity to learn more about the League's Field Organization, as well as discuss the variety of ARRL programs and support available from Headquarters with staff experts.

Western Washington Section Manager Jim Pace, K7CEX, said he has attended many conferences throughout his career and found that "some are not so good, some are sort of good and some are just a waste of time; however, the Section Manager Workshop was beyond what I thought it was going to be. The information, quality of presenters and the ability to converse, argue and resolve issues with other Section Managers made it a great

event."

Louisiana Section Manager Gary Stratton, K5GLS, agreed: "I had a great time in Newington, as well! It was a pleasure to meet all of the other Section Managers and interact with them during the meetings. I think that Steve and the rest of the Headquarters staff did a great job organizing the sessions."

Those providing workshop presentations included Ewald, ARRL Emergency and Preparedness Manager Dennis Dura, K2DCD; ARRL Marketing and Sales Manager Bob Inderbitzen, NQ1R; ARRL Chief Development Officer Mary Hobart, K1MMH; ARRL Contest Branch Manager Sean Kutzko, KX9X; ARRL Media and Public Relations Manager Allen Pitts, W1AGP; ARRL Education Services Manager Debra Johnson, K1DMJ; ARRL Lab Manager Ed Hare, W1RFI. ARRL Field and Regulatory Correspondent Chuck Skolaut, K0BOG, spoke about the Amateur Auxiliary and issues concerning regulatory matters. ARRL News Editor Khrystyne Keane, K1SFA, discussed writing and editing for the ARRL Web site, QST and other League publications.

Workshop attendees were Jay Isbell, KA4KUN, Alabama; Jim Larsen, AL7FS, Alaska; Jim Latham, AF6AQ, East Bay; Ed Stuckey, AI7H, Idaho; Gary Stratton, K5GLS, Louisiana; Don Wood, W5FHA, New Mexico; Joe Giraudo, N7JEH, Nevada; Lynn Nelson, W0CQ, North Dakota; Paul Eakin, KJ4G, Northern Florida; Rich Krohn, N2SMV, Northern New Jersey; Steve Early, AD6VI, San Diego; Glen Clayton, W4BDB, Tennessee; Jim Pace, K7CEX, Western Washington, and LeeAnne Allen, WY7DTW, Wyoming.

==> RICHARD GARRIOTT, W5KWQ, GETS BUSY FROM SPACE

Richard Garriott, W5KWQ, took off for the International Space Station (ISS) on Sunday, October 12, becoming the sixth private citizen to fly with the Russian Federal Space Agency (RKA) for a short-term mission on the ISS. Not two hours after he arrived on the ISS on October 14, Garriott was making ham radio contacts, just as his father, Owen Garriott, W5LFL -- the first ham to make QSOs from space -- did in 1983. Richard is scheduled to return to Earth on Thursday, October 23.

Amateur Radio on the International Space Station (ARISS) International Chairman Frank Bauer, KA3HDO, said that not only did Richard start making QSOs almost immediately after docking to the ISS, he also started SSTV operations. "We have had a number of image uploads on the [ARISS Web] site by hams from all around the world. A volunteer ARISS team is working 24/7 during Richard's flight to review these images, to understand how the SSTV operations are progressing and to include some of these images on the Gallery pages [on the ARISS Web site] <http://www.amsat.com/ARISS_SSTV/>. All uploaded images have been archived and are being reviewed." Bauer asked hams to continue to upload these images, as they help the ARISS team analyze and redirect the SSTV operations. He also said that a blog providing the latest ARISS information for Richard's expedition is available <http://www.ariss-sstv.blogspot.com/>.

"Richard is really not supporting SSTV uplinks during his short duration mission," Bauer said. "The downlink is on the normal ARISS VHF downlink, 145.80 kHz." For general voice contacts, Bauer recommends the regular general voice frequencies: 145.80 for the downlink and 144.49 in Region 2 (Americas) and 145.20 for Region 1 (Europe, Africa, Middle East) and Region 3 (Australia, Asia) for the uplink. "Richard and Mike Fincke, KE5AIT, have been on the air on voice since shortly after docking [on Tuesday]," Bauer said.

"Richard is great!" said ARRL ARISS Program Manager Rosalie White, K1STO. "First he wanted to do a QSO with the mayor of his hometown -- Austin, Texas -- then he asked us to sponsor an Austin school QSO. He got the mayor to bring kids into the mayor's office for the QSO! Last I heard, several busloads of kids were being brought to the mayor's digs. And right after that QSO, he thrills hams with more QSOs. We've gotten several notes from hams who talked to Richard saying they had talked to his dad years ago, too. Pretty cool!"

Richard also chose the Budbrooke Primary School in Warwick is England to make QSOs with. "The QSO will enhance their technology and ham radio studies. ARISS Vice Chairman Gaston Bertels, ON4WF, in Belgium is mentoring this school," White said.

Richard has also scheduled a QSO with two groups who are in the ARISS queue: Pinehurst Elementary School in Ashland, Oregon, and the National Planetarium in Kuala Lumpur, Malaysia. The teacher at the Oregon school is leading the ham radio presentations and space-related lessons; John Spasojevich, AG9D, of Indiana is mentoring this school. The planetarium QSO will be coordinated by ARISS volunteer Sangat Singh, 9M2SS, using the planetarium's club call sign 9M2SS. Part of the planetarium's Space Challenge educational activities, the QSO is scheduled on the day Richard is required to pack his belongings for his return to Earth. If he becomes too occupied with packing and other required duties, Mike Fincke, KE5AIT, the commander of Expedition 18, could assist with the QSO.

Because Jamboree on the Air (JOTA) takes place on while Richard is on the ISS, he hopes to hook up on the air with Scouts. "Past experience shows that scouts love talking to hams in space," White said. "The ARISS Team feels the most important aspect of Richard's mission is to pique students' interest in science and technology through the ARISS QSOs."

Bauer explained that Richard Garriott's flight on the ISS is "a part of history. Some of you have asked why Richard is using his call sign for some QSOs and SSTV contacts, instead of the ISS station call signs. There is a long and proud history that is attached to the Garriotts. This includes ham radio in space and their personal call signs. Twenty-five years ago, Richard's father, Owen Garriott, W5LFL, initiated the first ham radio contacts from space on the STS-9 SAREX mission. Richard, W5KWQ, is following in his father's footsteps, using the ARISS ham radio system extensively on his first flight. Richard's call sign is actually his grandfather's original call sign. So you can see that this mission touches three generations of ham radio and two generations of

ham radio in space!"

==> ARRL GENERAL LICENSE COURSE ON CD-ROM NOW AVAILABLE

Now there is even more help for upgrading to a General class Amateur Radio license -- the new "ARRL General Class License Course" <http://www.arrl.org/catalog/?item=1387>. The course includes the popular "ARRL General Class License Manual" with an all new instructional CD-ROM. This package has everything you need to upgrade.

The CD-ROM includes topics divided into "bite-sized" sessions, allowing you to learn at your own pace. The visual animations, along with colorful illustrations and audio, make your learning experience exciting and fun. The CD-ROM also includes quizzes and practice exams based on official exam questions to help reinforce your learning. The complete "General Class License Manual" is on the CD, giving you the freedom to have the entire book at your fingertips.

There are many reasons to upgrade your license, including:
* More frequencies -- The General class licensee has access to more bands.
* More communications options -- As you access the General frequencies, you now have many more ways to make contacts on new modes and with new groups of hams. Your new skills are also valuable to your emergency team or club.
* New technical opportunities -- With your new General class privileges, you now have many more ways of assembling and operating a station. The effects of the ionosphere and solar conditions will become second nature. Your improved technical understanding of how radio works will make you a more knowledgeable and skilled operator.
* More fun -- The traditional activities of ragchewing, DXing and contesting continue to attract hams as they have for decades. You'll find that even familiar activities take on new and interesting aspects on the HF bands.

Not only does upgrading your license grant you more privileges, but your experiences will be much broader. You'll enjoy Amateur Radio in ways that hams have pioneered and fostered for generations. These new privileges are well worth the effort.

By earning your General class license, you will gain access to nearly all amateur frequencies. Remember: There are no bands on which a General class licensee can't transmit! As a more experienced ham, your wider knowledge will allow you to experiment with, modify and build equipment and antennas to improve your communications abilities.

The "ARRL General Class License Course" with CD-ROM is available from the ARRL for only $74.95 <http://www.arrl.org/catalog/?item=1387>. This course is valid for exams given until June 30, 2011.

Minimum System Requirements for CD-ROM -- Microsoft Windows Vista/XP/2000/NT/98/95 or Apple OS X; 200 MHz processor; 32 MB RAM; sound card and speakers; 4-speed CD-ROM drive or higher. Requires Web

browser -- Microsoft Internet Explorer 6.0, Mozilla Firefox 2.0, Apple Safari 3.0 or later versions. Some documents require Adobe Reader.

==> CONTESTER/DXER PAULO CORTESE, I2UIY (SK)

Well-known contester, DXer, and QST and NCJ author Paolo Cortese, I2UIY, passed away from a brain aneurysm the weekend of October 11. He was 48. According to fellow contester Doug Grant, K1DG, Cortese was the "most popular competitor" at the first WRTC in Seattle in 1990 <http://www.ncjweb.com/w2gd_a.pdf>.

"His big laugh and constant kidding around really made everyone smile," remembered Grant. "Everyone will tell you that he was a big man with a big heart, a big appetite for life (both literally and figuratively) and one of the biggest and most enthusiastic cheerleaders for ham radio in general -- and contesting specifically -- anywhere in the world."

Cortese served as log-checker for many contests, including the European Sprints, CQ WPX RTTY and CQWW RTTY, and was an active DX advisor to the CQ World Wide Contest Committee, translating the rules into Italian. Grant said that as manager of the Associazione Radioamatori Italiani (ARI, the Italian IARU Member-Society <http://www.ari.it/>) QSL bureau, "every QSL card into or out of Italy via the bureau passed through Paolo's hands."

Cortese was inducted into the CQ Contest Hall of Fame in 2008. "Paolo has been a tremendous contributor behind the scenes to contesting and ham radio," said fellow inductee Randy Thompson, K5ZD. "It was an honor to be inducted into the CQ Contest Hall of Fame with him this year."

His article, "A DXpedition to Niger" appeared in the May 2002 issue of QST.

==>SOLAR UPDATE

Tad "Warms in the Sun, refreshes in the breeze" Cook, K7RA, this week reports: Finally, we are seeing Solar Cycle 24 sunspots that don't emerge on one day, only to evaporate the next. That's right -- sunspots, as in two or more. On Friday, October 10, sunspot 1005 emerged at high latitude over our Sun's eastern limb; that day's sunspot number was 12. On the following day, the sunspot number rose to 16 and a solar wind emerging from a coronal hole caused a geomagnetic storm. The planetary A index rose from a quiet 3 on Friday to 37, and the mid-latitude A index was 20. The 3-hour planetary K index reached a maximum of 7 that day, a high value for that scale. Conditions have quieted again since then. On Sunday, Monday and Tuesday -- as the spot progressed toward the center-north of the solar disk -- sunspot numbers were 16, 15 and 14 as the dark spot began to fade. On Wednesday, the sunspot number faded another point to 13, but on Thursday, October 16, sunspot 1006 emerged, but this time in the southwest corner, about to rotate out of view. The sunspot number for Thursday jumped to 24. Sunspot numbers for October 9-15 were 0, 12, 16, 16, 15, 14 and 13 with a mean of 12.3. The 10.7 cm flux was 68.7, 68.9, 70.8, 70.1, 70.9, 70.4 and 70.9 with a mean of

70.1. The Estimated planetary A indices were 2, 3, 37, 13, 9, 4 and 8 with a mean of 10.9. The Estimated mid-latitude A indices were 1, 2, 20, 10, 7, 3 and 7 with a mean of 7.1. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Alexander Pope's "Essay on Man" <http://www.gutenberg.org/etext/2428>.

==>IN BRIEF:

* This Weekend on the Radio: This week is the ARRL EME International Competition on October 18-19 and the ARRL School Club Roundup from October 20-24. The NCCC Sprint is October 17 and the Feld Hell Sprint is October 18. Look for the JARTS WW RTTY Contest, the ARCI Fall QSO Party, the Worked All Germany Contest, the Stew Perry Topband Challenge, the W/VE Islands QSO Party, the PODXS 070 Club 160 Meter Great Pumpkin Sprint and the 50 MHz Fall Sprint to be on the air October 18-19. The Asia-Pacific Fall Sprint (CW) and the UBA ON Contest (2 Meters) are October 19. The Illinois QSO Party is October 19-20 and the Run for the Bacon QRP Contest is October 20. The SKCC Sprint and the RSGB 80 Meters Club Sprint (SSB) are October 22. The NCCC Sprint is October 24. Next week is the
NCCC Sprint on October 24. The Microwave Fall Sprint is October 25 (local time). The CQ Worldwide DX Contest (SSB) and the 10-10 International Fall Contest are October 25-26. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, November 9, 2008, for these online course sessions beginning on Friday, November 21, 2008: Amateur Radio Emergency Communications Level 2 (EC-002); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted

through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cep@arrl.org>.

* ARRL On-Line Auction Begins Preview Week: The Third Annual ARRL On-Line Auction began its preview week on Thursday, October 16 <http://www.arrl.org/auction>. With more than 160 items up for bid -- with more being added every day -- this event promises to have something for just about everyone. The auction will kick off October 23 and runs until October 31 on the ARRL Web site. This year's auction will again include many transceivers and other items that have appeared in the QST Product Review column and have thus been thoroughly tested by the ARRL Lab. According to ARRL Chief Operating Officer Harold Kramer, WJ1B, "Last year's online auction -- our second -- proved to be a successful and enjoyable event for both hams and ARRL staff members alike. When the bidding ended, we realized that we had sold 162 items and sold just over $50,000 worth of merchandise." Proceeds from the auction benefit ARRL education programs including activities to license new hams, strengthen Amateur Radio's emergency service training, offer continuing technical and operating education, as well as create instructional materials.

* E-mails Asking for Personal Information Are Not from ARRL: We have received several reports from ARRL members with arrl.net e-mail accounts who have recently been contacted via e-mail asking for personal information, such as user names and passwords. Please be assured that these e-mails are fraudulent attempts at "phishing" <http://en.wikipedia.org/wiki/Phishing> and did not originate from ARRL. According to ARRL Information Technology Manager Don Durand, "This is a very crude attempt at phishing, using an easily determined spoof of the originating/return address. There is never a time when we would ask via mass e-mail for user names and passwords of arrl.net users. There is simply no need to ever do so." If you receive an e-mail asking for personal information and it looks like it originated from ARRL, please do not respond, just delete it.

* Hams Can Help Scientists Study Shrikes: For the second year, scientists are asking ham radio operators and VHF monitoring enthusiasts to assist in scientific studies of Eastern Loggerhead Shrikes <http://www.shrike.ca/index.html>. If you live in an eastern state and can tune away from the ham bands for a few minutes a day, you could help scientists study this endangered bird species. Every year, these birds leave their captive breeding program in Ontario, Canada, but fewer and fewer are returning in the spring. Researchers at the University of Guelph in Ontario have placed radio tags on 20 young shrikes. Although the primary purpose of the tags is to determine dispersal patterns -- the movements the birds make immediately after leaving their nests -- scientists also hope that more may be learned about the birds' fall migration journey. Scientists think the birds will fly south to Florida, but they might also overwinter in Tennessee, North Carolina and states

just south of there. You can help by tuning in regularly to the tag frequencies, which are between 172-173 MHz. The complete frequency list is published here <http://www.homingin.com/>, along with articles to help you distinguish the pulsed tags from other signals you may hear. Please listen now, as migration is under way; the radio tag batteries will only function until the end of November. -- Joe Moell, K0OV, ARRL ARDF Coordinator

* ARRL to Participate in Combined Federal Campaign: For the seventh year running, the US Office of Personnel Management has designated the ARRL to participate in the 2008 Combined Federal Campaign (CFC) <http://www.opm.gov/cfc/>. In the past, this campaign for federal government civilian employees, US Postal Service workers and members of the military has generated more than $120,000 for ARRL programs; in 2008 alone, ARRL has received $37,475 in pledges from CFC participants and direct contributions of $21,316. The CFC provides an easy way to support ARRL's effort to represent its members and all radio amateurs. Similar to the United Way, the CFC encourages individuals to pledge by payroll deduction to non-profit organizations of their choice. The ARRL encourages eligible radio amateurs to consider the League when designating campaign recipients. Payroll deduction through the CFC is an easy way for participants to support ARRL over and above their annual membership. Such contributions support programs that are not funded by member dues, enriching ARRL's ability to serve its members and all of Amateur Radio. Those wishing to select the ARRL to receive all or part of their payroll deductions should designate organization 10099 when completing their CFC donor forms. Donations to ARRL can be designated for Diamond Club contributions, the ARRL Spectrum Defense Fund or the ARRL Education & Technology Program. Donors may also make unrestricted contributions to the League. One important note: Since the CFC does not provide the ARRL with the names of individual donors, the ARRL Development Office <k1mmh@arrl.org>; would appreciate a copy of the donor form to ensure that each contribution is applied according to the donor's wishes and the contribution or pledge can be properly acknowledged. The 2008 CFC ends December 15.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

I think you may be conflating a couple of bits of history there.

The Novice license wasn't in 1951 created to restrict newcomers. It was created to encourage them. There was never a requirement that newcomers start out with a Novice license.

The idea was that instead of having to learn enough Morse Code, theory, regulations and operating practice to pass the General/ Conditional, newcomers could choose to get the much-easier Novice and learn by doing. But since the Novice had much less comprehensive test requirements, its privileges were reduced as well.

Not only that, but until the mid-1970s, the Novice was a nonrenewable one-time-only license, which emphasized its learner's-permit concept.

OTOH, the changes that came to be known as "incentive licensing", with the maze of subbands-by-license-class, did not come into effect until late 1968, and had nothing to do with the Novice license.

All ancient history now.

Yes, some things do not change. All that's needed to verify that is to read some of the "Rotten Radio" stories by T.O.M.

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

==> ARRL FILES PETITION WITH FCC AGAINST EXPERIMENTAL LICENSE USING 40 METER BAND

On Monday, October 20, the ARRL filed a "Petition for Modification or Cancellation of Experimental Authorization" ("Petition") <http://www.arrl.org/news/files/Digital_Aurora_Radio_Technologies_Petition_10_20_08.pdf> with the FCC with respect to WE2XRH. According to the FCC, this experimental license -- issued to Digital Aurora Radio Technologies (DART) -- proposes to "test digital transmissions in 4.50-5.10 MHz, 7.10-7.60 MHz and 9.25-9.95 MHz for a terrestrial digital radio service to the citizens of Alaska."

The League's petition states that DART's hopes that this experimentation "will lead to a terrestrial, high-frequency (HF) digital aural (domestic broadcast) service in Alaska. Ostensibly to study the operation of this 'shortwave' system at high latitudes, and apparently in order to roll out this domestic broadcast service, DART specifies exceptionally high power operation in various segments of the HF spectrum. ARRL's interest in this matter is limited to the fact that the experimental license includes the band 7.1 -7.3 MHz...allocated domestically exclusively to the Amateur Radio Service."

"It is astonishing that the FCC would grant this experimental license for operation at such a high power level in a band that is allocated exclusively to a service with which such operation is clearly incompatible," said ARRL Chief Executive Officer David Sumner, K1ZZ. "The only possible explanation is that it was an error; the only reasonable step for the FCC to take is to correct its error immediately, either by cancelling the license or by amending the frequency ranges to delete 7.1 -7.3 MHz."

It is the ARRL's view that "Simply stated, there is a 100 percent certainty of severe, continuous, harmful interference from operation of the DART facilities as authorized by the Commission to ongoing Amateur Radio operation at 7.1 to 7.3 MHz. This authorization must be modified immediately (if not cancelled completely), so as to delete the band 7.1-7.3 MHz" from DART's experimental license application.

DART has been permitted operation in the 7.1-7.6 MHz band using a 20 kHz bandwidth digital emission at a transmitter output power of 100 kW and an ERP of 660 kW within a radius of 1500 kilometers of Delta Junction, Alaska. In the petition, ARRL General Counsel Chris Imlay, W3KD, points out that while DART says it will coordinate with the High Frequency Coordination Conference (HFCC) <http://www.hfcc.org/>, "[i]t does not propose any coordination with any individual or entity in the Amateur Service. There is no showing whatsoever how DART proposes to avoid interference to Amateur Radio operation at 7.1-7.3 MHz. In fact, there is no indication that DART is even aware of the allocation."

Calling the 40 meter band "perhaps the most heavily-utilized Amateur HF band in the United States," the ARRL states that it can see "no compatible use that DART can make of this band in any state or territory of the United States, at any time of the day or night" and that such use will cause "preclusive interference" to amateurs using that portion of the band. "The entire 7.0 - 7.3 MHz band is used heavily within Alaska, especially by radio amateurs located in its remotest areas, at all times. It is particularly critical in times of emergency due to its daytime and nighttime propagation characteristics. The band is also used at all times of the day and night for worldwide communications by radio amateurs."

The League's "Petition" points out that the FCC's Rules at Section 5.83(b) state that experimental license grants are subject to change or cancellation by the Commission at any time without hearing if in the Commission's discretion the need for such action arises: "ARRL submits

that this application should never have been granted as applied for in the first place, and there is an urgent need to prohibit operation of the DART high power transmitters in the entirety of the 7.1-7.3 MHz band. It is likely that DART has been under a misapprehension that the band is among the international broadcast allocations, because, in ITU Regions 1 and 3, the band is allocated to that Service. However, in Region 2, in Alaska, it is not." After March 29, 2009, 7.1-7.2 MHz will not be available for broadcasting anywhere.

The League goes on to say that Section 5.85 of the Commission's Rules governs the selection and use of frequencies by holders of experimental authorizations and adamantly states that "there is no justification submitted by DART for the use of the frequency bands requested, particularly with respect to 7.1-7.3 MHz. It is unclear why such large segments of spectrum were specified by DART, given its stated course of experimentation, and given its narrow occupied bandwidth" and notes that DART "should have been required to conduct its frequency coordination efforts in advance of the filing of its application."

The ARRL contends that DART's proposed facility cannot meet the FCC's requirements, as outlined in the Commission's Rules, Section 5.111(a)(2), "and there is no showing that the transmitter power is the lowest practical value consistent with the program of experimentation. Nor has it even taken Amateur Radio operation into account." This portion of the Rules state that when transmitting, the experimental licensee "must use every precaution to ensure that the radio frequency energy emitted will not cause harmful interference to the services carried on by stations operating in accordance with the Table of Frequency Allocations of part 2 of this chapter and, further, that the power radiated is reduced to the lowest practical value consistent with the program of experimentation for which the station authorization is granted. If harmful interference to an established radio service develops, the licensee shall cease transmissions and such transmissions shall not be resumed until it is certain that harmful interference will not be caused."

Calling for DART's WE2XRH experimental license to "be cancelled entirely, or at least modified so as to delete the reference to any Amateur HF allocation," the ARRL reminded the FCC that DART failed to make any showing as to how it would avoid interference to Amateur Radio operation at 7.1-7.3 MHz: "ARRL submits that such a showing could not be made in any case."

==> ARRL ANNOUNCES NEW YOUTH EDITOR

Duncan MacLachlan, KU0DM, of Prairie Village, Kansas, has been named as the new ARRL Youth Editor and will write the Youth@HamRadio.Fun column <http://www.arrl.org/news/youth/>. MacLachlan, who turns 14 next week, takes over from Andrea Hartlage, KG4IUM, as she continues her education at the Georgia Institute of Technology (Georgia Tech). Amateur Radio runs in the MacLachlan family -- 12 family members are hams. "I got interested in ham radio through Boy Scouts," MacLachlan said, "but it

was with family support that I got licensed."

An ARRL member, MacLachlan was first licensed in February 2006. "I passed my Technician and decided I might as well get the code out of the way at the same time," he said. "I came home that afternoon with my CSCE and began the cycle of looking at radios, checking their price and then checking to see if I was in the database. Finally, after what felt like a year, but was really just a few days, I learned my call: KC0VVU."

Using an old handheld transceiver that his uncle, Phillip Fry, WD0FHK, loaned him, MacLachlan quickly got on the air. "I soon learned that I wasn't going to get into any repeaters from my room, so I put on a jacket and went outside to brave a February evening to talk on the radio," he said. "It was worth it! But it wasn't long that I got restless with being restricted to VHF/UHF -- I wanted to be able to talk around the world! I decided it was time to get to work on getting my General class license. I studied for two weeks and passed that test in April 2006 at a local hamfest."

MacLachlan said he remembers "getting on HF and gleefully calling CQ every afternoon." But soon, he said, he caught the DX bug: "I was satisfied with stateside QSOs, but not for long. I had heard about DX hunters, and the 'last 25,' so after doing some research, I knew I'd need my Amateur Extra license to get those contacts. After about a year of procrastinating, I decided it was time to start studying for my Extra. I think late January 2007 was one of the happiest times of my ham career: I had passed my Extra! Later that year, I changed my call to KU0DM. The KU is for University of Kansas (go Jayhawks!) and the DM is for my initials."

Since then, MacLachlan has become active in public service and emergency communications. "I feel that it is very important to provide Amateur Radio communications when asked or needed and that we do it in a way that is efficient for the operation and that respects accepted practice on the bands. I am currently the coordinator for the Johnson County ARES Rapid Response Team. My job is to assemble a roster of amateurs who are ready to respond at moment's notice to any disaster or request to aid in communications."

Outside of public service, MacLachlan, who calls himself a "big APRS geek," enjoys helping to build and maintain repeaters and digipeaters, trying to get the most range and reliability out of them. "I am a huge DXer," he said. "My total is currently at 110 entities (with a dipole and 100 W). When I get the chance, I'll put in an effort for almost any contest. I mainly operate SSB, but am getting up to speed on my CW after a year-long hiatus. I also enjoy weak-signal/sound card modes on HF and spend a lot of my time on PSK31 or RTTY. My favorite band is 15 meters. It is really almost always open, but people just don't use it."

Outside of ham radio, MacLachlan is an 8th grader at Indian Hills Middle School: "I enjoy football, basketball, climbing, swimming, listening to music and just spending time with friends and family. I am a Life Scout

with Boy Scout Troop 91 and am working toward my Eagle Scout rank. I also am a Brotherhood member of the Order of the Arrow. I'm always looking ahead to see what's next in life and Amateur Radio!"

The two previous ARRL youth editors -- Hartlage and Brian Mileshosky, N5ZGT -- have both received the prestigious Hiram Percy Maxim Award from the ARRL <http://www.arrl.org/FandES/field/awards/hpm.html>, as well as "Amateur Radio Newsline's" Young Ham of the Year Award (YHOTY). Hartlage was also awarded the Goldfarb Scholarship <http://www.arrl.org/news/stories/2007/04/12/101/> from the ARRL Foundation in 2007. Mileshosky currently serves as Rocky Mountain Division Director; he is the youngest to be elected ARRL Vice Director and Director.

==> ARRL HOSTS AMATEUR RADIO CLASSROOM FOR USTTI STUDENTS

Students from Kenya, The Gambia, Ghana, The Philippines, Honduras, Dominica and Nepal attended the United States Telecommunications Training Institute (USTTI) Amateur Radio Administration Course (ARAC) <http://ustti.org/courses/display.php3?CourseID=332> at ARRL Headquarters October 13-17. ARRL Chief Technology Officer Paul Rinaldo, W4RI, coordinated the session and led the course. ARRL Assistant to the Chief Executive Officer and Meeting Planner Lisa Kustosik, KA1UFZ, coordinated with ARRL's participation with USTTI.

ARRL Technical Relations Manager Brennan Price, N4QX, led the classes on the first day. According to Price, the students work in their respective government telecommunications offices dealing with telecommunications and Amateur Radio testing, licensing and monitoring. "Our seven students -- Fitzroy Pascal (Dominica), Purushottam Prasad Khanal (Nepal), Godfrey Odipo (Kenya), Eriberta Tamoro (The Philippines), Paola Michelle Pascua Cantarero (Honduras), Constance Takyi (Ghana) and Rodine Renner (The Gambia) -- made the trek to Newington," said Price. "The curriculum covered a wide variety of Amateur Radio topics and concerns, including licensing, spectrum requirements, disaster communications and antenna requirements." The curriculum also covered the ITU and its regulations, as well as the process leading to the 2011 World Radiocommunication Conference (WRC-11).

"All seven students took a keen interest in how the Amateur Radio Service has developed through its history and continues to develop today," Price said. "There was a particular interest in RFI issues, and students were receptive to our ideas for resolving these issues."

Numerous ARRL HQ staff assisted with the course. VEC Manager Maria Somma, AB1FM; Assistant VEC Manager Perry Green, WY1O, and Regulatory Information Manager Dan Henderson, N1ND, covered US Amateur Radio Licensing Structure and the VEC program. Dennis Dura, K2DCD, presented the Disaster Communications module, and ARRL Publications Manager and QST Editor Steve Ford, WB8IMY, spoke on HF digital communications and Amateur Radio satellites.

ARRL Laboratory staff members -- Mike Gruber, W1MG; Bob Allison, WB1GCM; Zack Lau, W1VT, and Ed Hare, W1RFI -- also contributed to the training effort. Hare and Gruber delivered presentations on RFI and RF safety, while Lau demonstrated 10 GHz equipment. Gruber and Allison assisted the students in assembling 40 meter receivers.

The Amateur Radio Administration Course is designed for those in developing countries who regulate and manage their countries' Amateur Radio Service. The course is intended to help participants create, administer and foster an Amateur Radio Service in their home countries. Now in its 26th year, USTTI is a nonprofit venture involving leading US-based communications and information technology corporations, as well as leaders in the federal government, cooperating to provide tuition-free management, policy and technical training for talented professionals from the developing world <http://ustti.org/>. ARRL has been offering the ARAC with USTTI for 24 years.

==> THE "DOCTOR IS IN" THE ARRL LETTER

This week, ARRL Letter readers are in luck! The ARRL's very own Doctor, author of the popular QST column "The Doctor Is IN," answers a question from his mailbag:

Jim Kueck, KC9LMO, of Long Grove, Illinois, asks: I greatly enjoyed the article about feeding a dipole with low loss balanced line in July 2008 QST. I have put up a half wave 40 meter dipole fed with 300 Ohm twin lead, with an antenna tuner at the radio. This $15 antenna has worked very well on 40 and 20 meters, with many European contacts logged using just 100 W.

Is there any concern about having RF in the shack with the twinlead as a feed line? I have read that a long wire antenna can pose this problem and want to be sure that I'm not slow cooking myself with this feed line going right in back of my operating position.

The Doctor Answers -- The short answer is no, but the long answer is longer! If the dipole is fed in the center, the two sides are at the same height and the transmission line is perpendicular to the antenna, the currents on the two sides of the balanced transmission line will be equal and opposite and there is virtually no radiation outside of an imaginary tube a few times the wire spacing around the wires.

If all of those conditions are not met, there may be some radiation from the line, but it will generally be a small portion of the total signal. Note that if you were to feed the dipole with coax, if you didn't have a balun at the antenna, the current on the outside of the shield would likely be higher than that from a not quite balanced dipole fed with balanced line. Note also that the pickup on a transmission line that is not perpendicular to the antenna would be about the same on coax as balanced line.

So my conclusion is that balanced line and coax are about the same in this regard, as long as you stay more than a few inches from the line -- it can have high RF voltage in places. If you notice effects of large

common mode currents on you feed line -- typically a hot chassis or RF feedback -- you will want to address them for many reasons, but even then I have trouble imagining an RF safety issue especially at the 100 W level.

One caution worth mentioning is that twinlead may be more susceptible to picking up RFI as it works its way to the tuner. Make sure you keep it as far as possible from your PC or other potential RFI generators.

Do you have a question or a problem? Send your questions via e-mail <doctor@arrl.org>; or to "The Doctor," ARRL, 225 Main St, Newington, CT 06111 (no phone calls, please). Look for "The Doctor Is IN" every month in QST, the official journal of the ARRL.

==> GET READY FOR THE ARRL NOVEMBER SWEEPSTAKES

This year marks the 75th running of the premier domestic contest, the ARRL CW Sweepstakes <http://www.arrl.org/contests/rules/2008/novss.html>. According to ARRL Contest Branch Manager Sean Kutzko, KX9X, the event started back in 1929 as a competition for handling formal traffic messages and is one of the oldest traditions in Amateur Radio. "The contest exchange contains more elements than usual, an homage to the traffic-handling days of yore," he said. "If you have never participated in Sweepstakes, you are really missing out on some serious fun! A complete primer by ARRL Contributing Editor H. Ward Silver, N0AX, on how to participate in Sweepstakes can be found in the Radiosport supplement in the October 2008 issue of QST."

Kutzko said that since 2008 is the 75th running of Sweepstakes, ARRL is anticipating record levels of participation and many prizes will be available for those who participate: "We'll have a special magnet that will be sent free to all stations that submit a log with 75 of the 80 ARRL and RAC Sections worked. As in previous years, those who submit logs with at least 100 contacts will be able to purchase Participation Pins."

The major challenge in Sweepstakes is to work all 80 ARRL/RAC Sections; this is known as a "Clean Sweep." "This year, we will be awarding a Clean Sweep whisk broom to all stations that make a Clean Sweep," Kutzko said. "Brooms were last available in 1983, the 50th running of Sweepstakes. In addition to the free brooms, Clean Sweep coffee mugs will also be available for purchase. This year's mug will be fine etched glass and will truly be a collector's item."

Thanks to ICOM America <http://www.icomamerica.com/>, the Principal Award Sponsor of the November Sweepstakes, certificates will be awarded for first place in each of the 80 ARRL/RAC Sections for all six entry categories; plaques will be available to the overall winners in each entry category, as well as the winners in each Division. "ICOM has provided plaques and certificates for Sweepstakes winners since 2005, and we are grateful for their support over the years," Kutzko said.

"Certain Sections are always rare for Sweepstakes, especially on CW," Kutzko pointed out. "VY0/VY1/VE8 (Northern Territories), VE1-VE9-VY2 (Maritimes), VE2 (Quebec), VE4 (Manitoba), VE5 (Saskatchewan), VO1-VO2 (Newfoundland-Labrador), Nebraska, North Dakota, South Dakota and Wyoming always seem to be highly sought after. If you live in one of these places (or want to travel there), this is a golden opportunity for you to be the 'rare DX.' Stations in these Sections get to hear 'Thanks for the Sweep!' more than once during the weekend. Even if your CW is rusty or your station is modest, your effort to put a rare Section on the air during CW Sweepstakes will be appreciated by every single station that works you."

Whether you want to go for a Top 10 finish, or simply get on the air to hand out a few QSOs or work on your Worked All States Award (WAS) <http://www.arrl.org/awards/was/>, Kutzko said the November CW Sweepstakes is guaranteed fun and excitement. Be sure to check out the complete rules and entry forms. Come be a part of one of Amateur Radio's finest traditions <http://www.arrl.org/contests/rules/2008/novss.html>.

==> NEXT ROUND OF PAVE PAWS MITIGATION CONTACTS BEGIN

On October 22, the FCC notified the ARRL that they would immediately begin making direct contact with owners or trustees of approximately 40 repeaters. The US Air Force identified these repeaters earlier this year as contributors to the harmful interference affecting the Beale Air Force Base PAVE PAWS radar installation near Sacramento, California.

"ARRL understands that contact with individual amateurs will be made from the DFCC's San Francisco office," said ARRL Regulatory Information Branch Manager Dan Henderson, N1ND. "The owners of these newly identified repeaters will be provided the operating parameters determined by the Air Force engineering unit's testing to be necessary to mitigate the interference. The owners will be requested to meet signal strength limits as soon as possible. The ARRL Lab and staff are available to answer specific questions for the owners of these newly identified repeaters and to provide technical information to assist them in implementing the mitigation."

Henderson said that as the Amateur Radio Service is a secondary user on the 70 cm band, "It is important for amateurs to remember that it is 100 percent our responsibility to eliminate harmful interference to the primary user. While we realize that this is and will continue to be an ongoing process, this third round of mitigation should mean that each of the known repeaters in the affected area has been tested at least once. How the FCC will address approximately 50 repeaters previously identified as interference contributors -- but which have not apparently completed the required modifications -- still remains. Nor is it clear when a process by which new coordinations can be issued in the area might commence."

Henderson reminded amateurs that "It is important to remember that this isn't a one-time solution. The amateur community needs to remain aware of this problem and responsibly utilize the band in the future to avoid

any large-scale problems such as those we have experienced in this situation."

==>PENSION PROTECTION ACT STREAMLINES CHARITABLE DONATIONS FROM IRAS

The ARRL Development Office notes that legislation was signed on October 3, 2008 in conjunction with the Economic Stimulus Bill of 2008 to include the immediate and retroactive extension of the popular charitable contribution a provision of the Pension Protection Act (PPA) of 2006.

Certain IRA holders may give something back to Amateur Radio by donating to the Spectrum Defense Fund, the ARRL Education and Technology Fund or the ARRL Diamond Club. The Diamond Club provides flexible funding for a variety of programs not supported by member dues.

"Individuals who are at least 70-1/2 and support nonprofits of their choice may use IRA or Roth IRA assets as a convenient, tax-efficient source to make contributions while conserving non-IRA assets," ARRL Chief Development Officer Mary Hobart, K1MMH, points out. "Contributions must be made directly from the IRA to the organization, not to a donor-advised fund, gift annuity or trust." Hobart says contributions of up to $100,000 may be made annually during each of the next two years -- by December 31, 2008 and again next year by December 31, 2009. "A direct contribution from an IRA to a qualified organization is excluded from income," she emphasizes. "We have received significant support through this program. I hope donors will take advantage of this renewed giving opportunity in 2008 -- and again next year!"

This two-year program expires December 31, 2009. Hobart urges prospective donors to consult with a financial advisor before taking advantage of this opportunity. Contact Hobart <mhobart@arrl.org> for more information or call 860-594-0397. You can also visit the ARRL's PPA Web site <http://www.arrl.org/development/ppa.html#top> for more information.

==>IN BRIEF:

* This Weekend on the Radio: This week, the NCCC Sprint on October 24. The Microwave Fall Sprint is October 25 (local time). The CQ Worldwide DX Contest (SSB) and the 10-10 International Fall Contest are October 25-26. Next week, look for the ARRL Sweepstakes Contest (CW) on November 1-3. The NCCC Sprint is October 31 and the IPARC Contest (CW) is November 1. The Ukrainian DX Contest is November 1-2. The IPARC Contest (SSB), the High Speed Club CW Contest and the DARC 10 Meter Digital Contest are all November 2. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event

Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, November 9, 2008, for these online course sessions beginning on Friday, November 21, 2008: Amateur Radio Emergency Communications Level 2 (EC-002); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cep@arrl.org>.

* Third Annual ARRL On-Line Auction Begins: The Third Annual ARRL On-Line Auction kicked off Thursday, October 23 <http://www.arrl.org/auction >. With almost 200 items up for bid, this event promises to have something for just about everyone. This year's auction will again include many transceivers and other items, including items that have appeared in the QST Product Review column, and have thus been thoroughly tested by the ARRL Lab. According to ARRL Chief Operating Officer Harold Kramer, WJ1B, "Last year's online auction -- our second -- proved to be a successful and enjoyable event for both hams and ARRL staff members alike. When the bidding ended, we realized that we had sold 162 items and sold just over $50,000 worth of merchandise." Proceeds from the auction benefit ARRL education programs including activities to license new hams, strengthen Amateur Radio's emergency service training, offer continuing technical and operating education, as well as create instructional materials. The auction runs through Friday, October 31 on the ARRL Web site.

* ARRL's 500 kHz Station, WD2XSH, Wants to Hear from You: Fritz Raab, W1FR, coordinator for ARRL's 500 kHz Experimental Station, WD2XSH <http://www.500kc.com/>, reports that fall has brought lower static and good propagation, making excellent conditions for the 500 kHz experimenters. The experimental license, issued in September 2006 <http://www.arrl.org/news/stories/2006/09/15/104/>, has more than 20 active stations. Raab said that last year, a second US experimental license -- WE2XGR, with five participants -- joined the project, as well as experimenters in the UK, Germany, Sweden and the Czech Republic. These stations' operating modes include CW, QRSS, PSK-31 and others. Contacts have been achieved at distances up to 1234 miles, with signals

received from all over North America, Alaska and Hawaii; trans-Atlantic reports are not uncommon. "The 500 kHz experimenters are experiencing excellent propagation conditions," Raab said. "The best time to listen is between sunset and sunrise." The operating frequencies are: WD2XSH -- 505.2-510 kHz; WE2XGR -- 505-515 kHz; UK -- 501-504 kHz, and SM, DL, OK -- 505.0-505.2 kHz. Raab requests that listeners file reception reports at the experiment's Web site so that they become part of the station's data base <http://www.500kc.com/>. Additional information can be found at the experiment's Web site and also in the July/August 2007 issue of QEX <http://www.arrl.org/qex/2007/07/raab.pdf>.

* TAPR Announces HPSDR Mercury Receiver Board: High Performance Software Defined Radio (HPSDR) is an open-source hardware and software project designed and developed by a group of enthusiasts with representation from interested experimenters worldwide. TAPR <http://www.tapr.org/> is looking for a "show of interest" to determine the production run for the new HPSDR Mercury receiver board. The assembled Mercury receiver board uses SMT parts and is manufactured in quantity by machine. If interested, please check out the HAMSDR Web site and log in <http://www.hamsdr.com/>. You will find the interest page under the <Projects><TAPR-HAMSDR> tab. Once interest has been determined, Mercury boards may be purchased from TAPR. Mercury board specifications can be found here <http://hpsdr.org/wiki/index.php?title=MERCURY>.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

==> FCC AMENDS WE2XRH EXPERIMENTAL LICENSE

In response to the October 20 ARRL Petition for Modification or Cancellation of Experimental Authorization (Petition) concerning an experimental license issued to Digital Aurora Radio Technologies (DART) station WE2XRH, the FCC today issued an amended license that redefines one of the station's frequency ranges to eliminate conflict with the Amateur Radio Service. This revision addresses ARRL's concern that the original 7.10 to 7.60 MHz range would cause unacceptable interference to Amateur Radio operations in the 40 meter band. The amended license narrows the range to 7.30 to 7.60 MHz and gives as the reason for the change, "operation in the band 7.1-7.3 MHz will cause harmful interference to Amateur Radio Service licensees."

"We are delighted that the FCC acted so promptly to correct this error and are pleased that the matter has been resolved," said ARRL CEO David Sumner, K1ZZ.

WE2XRH will be testing a proposed domestic broadcast service using a 20 kHz bandwidth digital emission at a transmitter output power of 100 kW and an ERP of 660 kW within a radius of 1500 kilometers of Delta Junction, Alaska. According to the amended license, the transmissions will take place in the frequency ranges 4.4 to 5.1 MHz, 7.3 to 7.6 MHz and 9.25 to 9.95 MHz.

1064. Amateur Radio Newsline(tm) Report 1628 - October 24, 2008

Amateur Radio Newsline(tm) Report 1628 - October 24, 2008

Amateur Radio Newsline report number 1628 with a release date of Friday, October 24th, 2008 to follow in 5-4-3-2-1.

The following is a QST. Richard Garriott, W5KWQ, heads home from space after thrilling the ham community on Earth. Also, the ARRL says no to 40 meter digital broadcasting in Alaska, the man accused of murdering a ham radio couple at sea is convicted in California and a radio clubs generosity brings rescue communications to the Idaho wilderness. Find out the details on Amateur Radio Newsline(tm) report number 1628 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: RICHARD GARRIOTT, W5KWQ, MISSION A SUCCESS FOR HAM RADIO

Its been an amazing trip into space for Richard Garriott, W5KWQ. Its also been one for ham radio operators world-wide who have had the opportunity to speak with him on-orbit. Amateur Radio Newsline's Mark Abramowicz, NT3V, has been following the story and has the latest:

--

Actuality: One of W5KWQ's from the ISS making final QSO's from orbit: Hear it in the MP3 version of this newscast available at www.arnewsline.org

--

As we prepare this report for this week's installment of the newscast, Richard Garriott's mission has come to a close.

And, those who worked behind the scenes to make it such a success for amateur radio are beaming.

Hundreds of contacts, thousands of Slow-Scan-Television Images, and an historic QSO between retired astronaut father (the first ham to make contacts in space) and his son, the next generation of ham from space.

Here are portions of that historic link - and we'll give you both sides of it. The QSO between Richard Garriott W5KWQ and his father, Dr. Owen Garriott, W5LFL.

--

Actuality: Excerpt of QSO audio between W5KWQ ans W5LFL - hear it in the MP3 version of this newscast available at www.arnewsline.org

--

And, imagine the thrill during the recent Scout Jamboree on the Air event when some heard this CQ:

--

Actuality: W5KWQ from the ISS calling CQ for Scouts: Hear it in the MP3 version of this newscast available at www.arnewsline.org

--

Perhaps the best way to sum up the success of the mission comes from a posting to AMSAT and the Amateur Radio on the International Space Station program personnel.

It's from David Barber G8OQW, who was among those to get a QSO with Richard and capture some 40 SSTV images from the space station.

Barber wrote with appreciation of what he described as the boundless exuberance Richard Garriott displayed during his stay aboard the ISS.

Quoting here: "Richard's (and the support teams) contribution has been immense. His QSOs have been carried out succinctly and with professionalism, his voice filled with contagious enthusiasm."

And, Barber continued, "The SSTV has been a triumph again due to the unstinting dedication of Richard and his support team."

Frank Bauer, KA3HDO, is AMSAT's vice president for Human Spaceflight programs, and the ARISS International Chairman.

In a posting that has been widely circulated, Bauer called it a stellar and an historic week for Amateur Radio on the International Space Station.

For the Amateur Radio Newsline, following the journey of W5KWQ, I'm Mark Abramowicz, NT3V, in Philadelphia

--

25 years ago Owen Garriott, W5LFL, opened to door to space for all of amateur radio. Now, in 2008, his son Richard, W5KWQ, has taken manned ham radio space operations to a whole new level. This by sharing his on-orbit experience with all of us here on Earth.

(Story by ARNewsline(tm) with on-orbit audio supplied by Scott Avery, WA6LIE and Stan Vandiver, W4SV. W5LFL to W5KWQ QSO excerpt from Richard Garriott in Space website. The complete QSO is at http://www.richardinspace.com/index.cfm?fuseaction=Multimedia_Gallery.welcome)

**

HAM RADIO IN SPACE: W5KWQ SSTV IMAGES ON YOUTUBE

Slow Scan TV images and audio clips from Richard Garriott W5KKQ's Amateur Radio operation from the International Space Station are now available on YouTube dot com. The video is presented in SSTV format as it was received in Robot 36 mode on a downlink frequency of 145.800 MHz FM. You can see and hear it at www.youtube.com/watch?v=mW9DXHkKpNo

Also more audio and video clips are on line at Richard Garriott's own website at http://www.richardinspace.com (Southgate, ARNewsline(tm))

**

THE HAWKES CASE: DELEON CONVICTED OF MURDERING COUPLE AT SEA

Back on Earth, a California jury has convicted Skylar Deleon of murdering three people. Two of them were amateur radio operators. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

A jury in Orange County, California has convicted Skylar Deleon of the special circumstances murder-for-profit of Thomas and Jackie Hawks, KD7VWJ and KD7VWK off the coast Newport Beach. Deleon was also found guilty of the murder of John Jarvi whose body was found in Mexico.

It took the jury less than 2 hours on Monday October 20th to reach its decision of guilty on all counts. Deleon's attorney Gary Pohlson had conceded from the outset that Deleon was guilty but should not be put to death.

After court let out, attorney Pohlson told reporters that during the penalty phase of the trial that he would try to convince the jury to spare his client's life. This, by having Deleon's relatives and doctors testify during the punishment phase about his troubled past.

The prosecution is demanding that Deleon be put to death. Its expected to present witnesses to refute the defense claims. There's also a chance that members of the Hawkes family will present testimony requesting that Deleon pay the ultimate price for his crimes.

The penalty phase of the trial began on Wednesday, October 22nd. Jurors are still deliberating as we go to air. More for you next week.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The jury's recommendation will be imposed on Deleon at a formal sentencing hearing before Superior Court Judge Frank F. Fasel who was the trial judge in the case. (ARNewsline(tm) from published news reports)

**

RADIO LAW: ARRL OPPOSES DIGITAL RBROADCASTING ON 40 METERS IN ALASKA

The ARRL is saying no to Digital Aurora Technologies proposed operation in the 40 meter band.

On Monday, October 20th, the League filed a Petition for Modification or Cancellation of Experimental Authorization with respect to license WE2XRH. This is an experimental license issued to Digital Aurora Radio Technologies that proposes to test digital transmissions in 4.50 to 5.10 MHz, 7.10 to 7.60 MHz and 9.25 to 9.95 MHz bands for a terrestrial digital radio service to the citizens of Alaska.

The ARRL says that its interest in this matter is limited to the fact that the experimental license includes the band 7.1 to7.3 MHz. This is a spectrum parcel that is allocated domestically exclusively to the Amateur Radio Service.

The ARRL says that in its view that there is a 100% certainty of severe, continuous, harmful interference from Digital Aurora Radio Technologies operation of the facilities as authorized by the Commission to ongoing Amateur Radio operation in the 40 meter band. It says that this authorization must be modified immediately if not cancelled completely. This, so as to delete the band 7.1 to 7.3 MHz from the experimental license application. (ARRL)

**

WORLDBEAT - SINGAPORE: NEW VISITORS LICENSE ANNOUNCED

Its now official. The Singapore licensing authority has now announced that temporary amateur licenses are available to radio amateurs visiting Singapore.

The application should be made three weeks before arrival and the license is typically valid for a three months period. A fee of 50 Singapore Dollars will be charged.

The application process and forms are posted on the Singapore Infocommunications Development Authority government website. Visitors must use their callsign preceded by Singapores 9V1 prefix while on the air. (Southgate)

**

RESCUE RADIO: FCC PROPOSES AMMENED 700 MHS EMCOMM BROADBAND PLAN

Yet another new interoperable radio system has been proposed by the FCC. Bill Pasternak, WA6ITF, is in the newsroom with the details:

--

In what the FCC calls a sustained commitment to help solve the nation's communications challenges currently faced by America's first responders, the Federal Communications Commission has adopted a Third Further Notice of Proposed Rulemaking. One that proposes licensing the D Block spectrum at 700 MHz as part of a revised public and private partnership that will maximize the public safety and commercial benefits nationwide through the creation of an interoperable broadband network.

In its recent press release, the FCC says that like in its first attempt the spectrum for this interoperable emergency communications system will be put up for auction. As such, the Notice also proposes to retain a so called public and private partnership framework for the project. This, absent other sources of funding.

The Notice also proposes that a Public Safety Broadband Licensee should remain a non-profit entity. As such, certain restrictions will need to be imposed on its business relationships to avoid the potential for conflicts of interest.

The FCC says that its primary goal is to promote the deployment of such a broadband network that provides maximum coverage to first responders across the country. The N-P-R-M also presents a number of specific proposals with regard to the rules governing public safety users and the Public Safety Broadband Licensee's. This includes such specifics as eligible users of the public safety broadband spectrum must be providers of public safety services as defined under federal law.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

There was no real interest in the private sector in supporting such a system the first time an attempt was made to auction this spectrum. Some observers feel that it will be no different this time around as the nation heads into some bad economic times. (ARNewsline(tm) From FCC release)

**

RESCUE RADIO: RADIO CLUB PROVIDES WILDERNESS REPEATERS IN IDAHO

Two new repeaters dedicated to rescue service are now up and running in Idaho's Wood River Valley and Sawtooth National Forest. This, thanks to the dedication of members of the Wood River Amateur Radio Club that spent $15,000 installing two radio systems.

According to a news report on KTVB television, the recently installed radio relay units are located on Mount Baldy and Galena Summit. The news report says that they are filling the gap in emergency response that was desperately lacking in the Sawtooth National Forest which is a dead zone for cellular telephone service. The report also noted that prior to the installation of the repeaters, that direct point to point radio communication was frequently impossible. (KTVB Television)

**

RESCUE RADIO: FALLBROOK CA. HONORS HAM RADIO WILDFIRE EMCOMMS

Southern California's Fallbrook Amateur Radio Club was recently honored for its contributions during last year's 10,000 acre wildfire. Called the Rice Fire, the blaze destroyed 206 homes, two commercial buildings and 40 outbuildings in and around the Fallbrook area.

Now, Fire Chief Bill Metcalf has acknowledged several groups that provided valuable help when the town of Fallbrook was evacuated. First on his list was the Fallbrook Amateur Radio Club which Chief Metcalf said put its people in the city's Emergency Operations Center and helped with communications.

Chief Metcalf termed the club as being a great group of community volunteers who function behind the scenes. He said that his hat is off to the Fallbrook Amateur Radio Club for a job well done.

The fire chief added that he and his staff are currently looking at ways to strengthen the clubs involvement. Fallbrook California is located North of the city of San Diego. (W6VR)

**

RESCUE RADIO: NEW CAL AGENCY SHOULD ENHANCE DISASTER COMMS

A new California state law will combine two emergency response agencies into one cabinet-level organization. The merger bill was in one of 10 measures Governor Arnold Schwarzenegger signed on Saturday September 27th aimed at improving the states emergency response and disaster prevention.

Schwarzenegger says merging the Governor's Office of Emergency Services and the State Office of Homeland Security will improve the state's ability to respond to emergencies and natural disasters. He says the new California Emergency Management Agency will be more streamlined and efficient than the two previous agencies were.

Observers say that the joining mean that communications between first responders and those backing them up should be more immediate. Also signed were several measures aimed at preventing or fighting wildfires and providing relief to disaster victims. (Published reports)

**

ENFORCEMENT: FAILURE TO OBSERVE LIGHTS LEADS TO $1600 FINE

The FCC has issued a monetary forfeiture in the amount of $1,600 to B K Towers of Manter, Kansas. This, for failure to make observations of the antenna structure's lights at least once each 24 hours, either visually or by observing an automatic indicator designed to register any failure.

Section 17.47(a) of theFCC's Rules states that the owner of any antenna structure which is registered with the Commission and has been assigned lighting specifications shall make an observation of the antenna structure's lights at least once each 24 hours. This can be done either visually or by observing an automatic properly maintained indicator

designed to register any failure of such lights.

Although an automatic alarm system was installed at the Tower, according to B K's owner, the system had not been operational for at least a year prior to September 10, 2008. BK also admitted that its system was not reliable and needed to be replaced.

Making matters worse, during the year prior to September 10, 2008, BK admitted that no employees or contractors visually inspected the Tower's lights on a daily basis. In fact, at most, BK employees made visual observations of the lighting status on only two days during the period between August 1, 2008 and September 9, 2008.

B K's response to the NAL does not dispute any of these facts. So, based on the evidence before it the FCC has found that BK willfully and repeatedly violated Section 17.47(a) of its rules by failing to observe visually the Tower lighting at east once each 24 hours, at a minimum, between August 1 and September 9, 2008.

The FCC has given B K the customary 30 days to pay the fine or to file an appeal. (FCC)

**

ENFORCEMENT: FTC BUSTS ALLEGED WORLDWIDE SPAM RING

Some truly unwanted communications should soon be gone. This with word that the Federal Trade Commission has successfully shut down a global spam operation. One that that's spewed out billions of unwanted e-mails to all of us in recent years.

The FTC says the spam and its click here web sites generated more than 3 million complaints. The agency says that these sites allegedly used false claims to try to sell unsuspecting customers a wide range of products.

According to the agency's Midwest director, web site servers were located in China with many products shipped from India. Operatives on Cyprus and in the former Soviet republic of Georgia handled the processing of credit card payments. (Published reports)

**

RADIO LAW: FCC LOOLKS AT BROADBAND FOR LOW INCOME FAMILIES

The FCC says that it will move forward with plans to reserve spectrum for free wireless Internet use for those who cannot otherwise afford it. According to the Washington Post, FCC Chairman Kevin Martin wants to provide some available spectrum for future free community-based wireless broadband..

Martin says that the new spectrum allocation would be used to design a broadband system for lower-income people who may not otherwise have access to the Internet. The move is opposed by large telecommunications companies such as T-Mobile, Verizon Wireless and AT&T. They claim that their

customers will experience interference from users of the new spectrum.

But a report by FCC engineers released on October 10th disputes that claim. The newspaper story says the field tests showed little if any interference would take place. (Published reports)

**

RADIO LAW: CONGRESS WANTS DIGITAL RADIO BILL

Some in congress feel its time to make every radio sold in the United States HD ready. Fred Vobbe, W8HDU, reports:

--

Massachusetts Congressional Representative Edward Markey says that he supports mandating HD Radio in any receivers that can tune in AM/FM analog and satellite radio signals.

The chairman of the House Subcommittee on Telecommunications and the Internet introduced the "Radio All Digital Channel Receiver Act." If passed, H.R. 7157 would require that radios used in the satellite digital radio service be capable of receiving terrestrial digital radio signals. That measure already has bipartisan support and several co-sponsors, including Representatives Republican Lee Terry, of Nebraska and Greg Walden of Oregon. Democrats in support include Texas' Charlie Gonzalez.

Markey said the recent satellite radio merger between Sirrius and X-M underscored the importance of ensuring consumer access to a diversity of sources for digital radio content. In particular content originating in their local communities.

I'm Fred Vobbe, W8HDU.

--

The legislative calendar is getting short as members of Congress prepare for the elections, so the chances of passage this year aren't good, experts believe. That said, observers believe the bill lays the groundwork for a better chance of passage next year. (RW)

EMERGING TECHNOLOGY: TAPR ANNOUNCES MERCURY SDR RECEIVER BOARD

Tucson Amateur Packet Radio has announced the development of a new a software Designed Receiver board code named Mercury.

The Mercury board is described as being a High Performance Software Defined Radio open-source hardware and software project. It was designed and developed by a group of enthusiasts with representation from interested experimenters worldwide.

Tucson Amateur Packet Radio says that it is looking for a show of interest in this unit to determine the production run for the new Mercury receiver board. If this unit interests you please check out http://hpsdr.org on the World Wide Web. (TAPR)

**

RADIO IN SPACE: INDIA MOON PROBE TO MAP MOONS SUB SURFACE

India will use a combination of spectral photography and ground penetrating radar to map the moons surface and sub-surface and will employ radio to send the data back to Earth. This after a launch vehicle carrying that nations Chandrayaan One moon exploration probe lifted off on Tuesday October 21st from India's spaceport launch facility.

The Chandrayaan One is scheduled to go into orbit 100 kilometers above the Moon on November 8th or 9th. It will then begin using on-board instrumentation from three countries to chart the Moons surface and its mineral composition below the surface

In addition to a three dimensional terrain-mapping camera developed by India, Chandrayaan One, is also carrying mapping instruments for the European Space Agency, radiation-measuring equipment for the Bulgarian Academy of Sciences and two devices for NASA. One of these has been described as a ground penetrating radar that will look for ice deposits in the lunar poles. The other will assess the moon's overall mineral composition.

Chandrayaan One is expected to remain in Moon orbit for at least two years. During that time it will radio its findings back to the Indian Deep Space Network Campus for analyses. The spacecraft will also release a probe to take close-range images during a 25-minute descent to the Moon's surface. This Moon Impactor Probe will hopefully soft land on the moon to kick up some dust, while instruments in the craft analyze the particles.

Chandrayaan-1 is being looked at as a stepping stone for the 2010 unmanned Chandrayaan-2 mission. This one which will be in collaboration with the Russian Space Agency, will include a lander and a rover vehicle. (India Space Agency release)

**

RADIO IN SPACE: RADIO GUIDES SPACECRAFT PAST ASTROID

Radio can be amazing. Just ask the folks at the European Space Agency in Germany that are using it to guide the Rosetta deep space probe which has successfully passed close to an asteroid 250 million miles from Earth

Rosetta is billed as a space exploration mission that may bring man closer to solving the mystery of the solar system's birth than any before it. The spacecraft recently completed its flyby of the Steins asteroid, belt between the orbits of Mars and Jupiter .

As expected, the spacecraft's radio signal was lost for about 90 minutes as engineers turned it away from the Sun. Right on schedule the signal from Rosetta resumed and was greeted with cheers from ESA engineers and technicians. (ESA release)

**

WORLDBEAT - SOUTH AFRICA: OCTOBER EXAM HITS CLOSE TO RECORD APPLICANTS

Turning to news from around the world, South Africa has likely added almost 100 new hams to its ranks in one sitting. According to the South African Radio League a close to record 97 Students that sat for that nations October national radio written examination that took place about two week ago. Now the applicants await the test results and their callsigns if they passed the test. (SARL)

**

WORLDBEAT - IRAN: IRAN OPENS 4TH TALLEST RADIO TOWER

Iran has opened a telecommunications tower more than quarter of a mile high. The 1,427-foot Milad Tower is the world's fourth tallest communication structure. The tallest is believed to be the 1,815-foot-high C N Tower in Toronto, Canada. (Southgate)

**

WORLDBEAT - BELGIUM: HIGH VOLUME ON MP3 PLAYERS CAN CAUSE HEARING LOSS

Researchers in Belgium say that prolonged use of MP-3 players and similar devices at high volume can lead to sustained hearing loss. This, as they release a report that says millions of youngsters across Europe could suffer permanent hearing loss if they listen to MP3 players at too high a volume for more than five hours a week and for a prolonged time.

The study was requested by the European Commission. It tackled the concept of leisure noise such as that coming from personal music players used at very high volume.

Commission experts estimate that between 50 and 100 million people listen to portable music players on a daily basis. The report says that if they listened for only five hours a week at more than 89 decibels, they would exceed European Union limits for noise allowed in the workplace. And if they listened for longer periods, they risked permanent hearing loss after five years.

The researchers calculated the number of people in that risk category at between five and 10 percent of listeners. This means up to 10 million people in the European Union alone Sales of personal music players have soared in European Union countries in recent years. (EU release)

**

WORLDBEAT: LOOKING FOR HORKHEIMER 2009

Germany's Deutscher Amataeur Radio Soceity, that's the is looking for nominations for the 2009 Horkheimer Prize.

Rudolf Horkheimer was one of the first radio amateurs in Germany. The prize bearing his name is awarded for merit in amateur radio and its further development. The prize can be awarded to one or more persons or institutions and is not restricted to members of D-A-R-C. Any member of an amateur radio society in the IARU is entitled for proposal. Self proposals are permitted.

The prize is awarded during the opening of Ham Radio 2009 fair in Friedrichshafen, Germany. Nominations must be submitted by March 31st 2009 to Deutscher Amateur Radio Vlub. Those submitting nominations should list name and address of the amateur, a short description of why he or she has been nominated and any further information you think useful.

And here's the fine print. The decision of the jury is final and cannot be voided. If there is no fitting proposal, the prize will not be awarded. (DARC)

**

DX

In D-X, listen out for DK3TNA operating portable EA8 from the Canary Islands. Stephan is expected to show up on 80 through 10 meter using CW and SSB at 100 watts to a dipole antenna. He will be there from October 20th to November 1st. QSL via bureau to his home call.

W8GEX and his crew of 6 plan to activate Saint Barthelemy from October 16th through the 27th and should be on the air right now. The call to listen out for is TO5DX with stations on CW, SSB, PSK, SSTV and RTTY on all of the High Frequency bands. QSL via AA4NN.

HB9AON will conduct its 25th DXpedition to Liechtenstein during the CQ World Wide SSB Contest at the end of October. They will be on the air from the 18th through the 31st complete with a host of guests from Europe, the USA and Asiatic Russia. QSL as directed on the air.

Lastly, WB5ZAM will be on from St Lucia signing J68WI on 30 through 6 meters from October 16th through the 30th. QSL cards should be sent to his home call, either direct or via the bureau.

(Above from various DX news sources)

**

THAT FINAL ITEM: BEWARE OF HAM RADIO PHISHERS

And finally this week, a warning that the fishers are out there and in this case we spell fishers p-h-i-s-h-e-r-s. These are electronic scam artists that want your personal information to rob you blind and they will

go to great lengths to get you to release it. Even claiming that its needed in some way for ham radio.

Now, the American Radio Relay League says that it has received several reports from members with arrl dot net e-mail accounts who have recently been contacted via e-mail asking for personal information. The League says that this includes such things as user names and passwords.

The ARRL says that these e-mails are fraudulent attempts at "phishing" and did not originate from ARRL. The League says that there is never a time when it would ask via mass e-mail for user names and passwords of arrl dot net users.

As we have said before, if you receive an e-mail asking for personal information do not respond. This even if it appears to come from some legitimate source you know and trust. Instead delete it and go on with life. Both you and your bank account will be happier that you did. (ARRL)

**

NEWSCAST CLOSE

Hi Rich

What is this dark vertical line problem you speak of? As a rough guess, I'll assume it is a displa issue. I've replaced LCD panels, and you need a combination of steadiness, and being very gentle. Torsion on the display is a real killer. It isn't likely to happen, but if you're using tweezers you cana accidentally apply a lot more force than you think.

Amateur Radio Newsline(tm) Report 1629 - October 31, 2008

Amateur Radio Newsline report number 1629 with a release date of Friday, October 31st, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. Richard Garriott, W5KWQ, thanks hams world-wide who helped to make his adventure in space a big success. Also, the crossband repeater on board the International Space Station comes on the air, a California jury decides the fate of a convicted murderer of two radio amateurs, Ireland gives its hams a 5 MHz allocation while hams in Spain gain access to the 1 point 8 and 70 MHz bands. All this and more on Amateur Radio Newsline(tm) report number 1629 coming your way right now.

HAM RADIO IN SPACE: RICHARD GARRIOTT W5KWK SAYS THANKS TO THE WORLD WIDE HAM COMMUNITY

Ham radio space traveler Richard Garriott, W5KWQ, is back on solid ground and has paused to thank the world-wide amateur radio community for making his journey to orbit such a great success. Mark Abramowicz, NT3V, is here to tell us what ham radios newest space hero has to say:

--

Actual contact audio of Richard Garriott W5KWQ on the ISS

--

Not long after getting through medical evaluations and getting adjusted to Earth's gravity, Richard Garriott had a lot to say about his amateur radio adventures in space.

His father, Dr. Owen Garriott, W5LFL, who met his son after he landed safely in the Soyuz space capsule, relayed Richard's thoughts and appreciation to the ham community through an email.

In it, Dr. Garriott provided a transcript of an interview with Richard, in which he relayed the space traveler's thoughts and feelings.

He said W5KWQ was surprised to find so many enthusiastic hams who were so well informed of his activities.

Richard said he was receiving reports from Mission Control-Moscow about the technical side of his work and how much the amateur community was enjoying his transmissions.

"This redoubled my enthusiasm to do quality work for the amateur radio legions around the world as I realized how much it meant to those with whom I had the chance to talk," Richard said. "By late in my flight I had contacted many hundreds of hams by voice and I have good records of these contacts."

--

Actual contact audio of Richard Garriott W5KWQ on the ISS

--

Finally, Richard related he had contacted many hams who had listened to or contacted his father in space 25 yars ago.

On the final days of his flight, Richard says he was moved by the many soft-landing messages from individuals and classrooms of children he received as he passed overheard.

And Richard offered a special salute to those who helped make his flight such a tremendous adventure.

"The ham community has added greatly to my personal feelings of success on my flight," Richard said. "I can only hope that you enjoyed it as much as I did."

Our thanks to Frank Bauer, KA3HDO, AMSAT's vice president for human spaceflight programs and international chairman of the Amateur Radio on the International Space Station program for passing along the Garriott email.

And, a special thanks to so many of you who forwarded audio clips to us here at the Amateur Radio Newsline editorial offices in Los Angeles of contacts W5KWQ made.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

While W5KWQ is back on the ground, the International Space Station will have at least one other ham radio visitor in the coming months. Word is that former Microsoft executive Charles Simonyi, KE7KDP, will be heading on his second trip to the orbital outpost sometime next year. (ARNewsline(tm) with actuality audio supplied by radio amateurs worldwide)

**

HAM RADIO IN SPACE: CROSSBAND REPEATER OPERATIONAL FROM THE ISS

Still with ham radio space related news, Roy Stokes, AG5D, says that astronaut Mike Fincke, KE5AIT has turned on the crossband repeater on board the International Space Station and early reports indicate that its coverage is quite good to those within its ever shifting radio range.

The world-wide frequencies are 437.80 MHz as your uplink while you listen on 145.80 MHz as the downlink or output channel. Operation is similar to working the Amsat Oscar 51 satellite or any ground-based crossband

system. The big difference is that in this case you literally talk through the repeater on board the I-S-S to other hams within range of the I-S-S radio footprint on the ground.

How long the crossband repeater will remain in operation is not known. 145.8 MHz is also used for normal QSO's and school contacts, you can expect it to be off during those times. Also, the crossband repeater uses the crossband repeat function of the on-board Kenwood D 700 radio. This unit is also used for other on-orbit ham radio operations and during those periods the repeater will likely be off line. (ARISS Refector)

**

RESCUE RADIO: GLOBAL SET NOVEMBER 8th UPDATE

More information has surfaced on the upcoming International Amateur Radio Union sponsored Simulated Emergency Test. As reported a few weeks ago, International amateur Radio Union member societies and emergency groups world-wide will take part in the on air communications exercise on November 8th. Jim Linton, VK3PC, has the latest:

--

The Global Simulated Emergency Test on or near the emergency Center-of-Activity frequencies on the 80, 40, 20, 17 and 15 meter bands runs 0400 to 0800 UTC on Saturday, 8 November.

Organized by the IARU Region 1 this exercise aims Increase the common interest in emergency communications
Test how usable the Center-of-Activity frequencies are across ITU regions
Create practices for international emergency communication and the relay of messages using all modes.

Participating stations using Phone, Data or CW will be heard calling 'CQ GLOBALSET' or initiating and relaying messages.

Where their local regulations permit they may also add the recommended /D to their callsigns to identify as a distress or disaster station.

The amateur radio community is asked to be aware of this important training exercise on the 8 November and to please keep the Emergency Center-of-Activity frequencies clear.

I'm Jim Linton VK3PC, reporting for the Amateur Radio Newsline.

--

Again that's Saturday, November 8th runs 0400 to 0800 UTC for the Global Simulated Emergency Test. A ham radio emergency training exercise whose results could eventually help save lives. (IARU via WIA News.)

**

RESCUE RADIO: CANADIAN DATABASE NAME CHANGE

Still with rescue radio news, word from up North that the acronym for the Radio Amateurs of Canada's Canadian Amateur Radio Emergency Database Has been charged from "CARED" to the National Amateur Radio Emergency Database, or "NARED." We are told that the change was made in order to avoid possible confusion with another Amateur Radio-related list that uses the "CARED" acronym for a database unrelated to emergency communications. (RAC)

**

RESTRUCTURING: HAMS IN IRELAND GET 5 MHZ ALLOCATION

The First 5 MHz licenses have been issued to hams in Ireland. Following a long process of contacts between the military authorities and Ireland's regulator ComReg, the first of the 5 MHz operating permits were issued to E I prefix stations on Friday, October 17th.

Hams in Ireland are permitted three, 3 kHz wide, spot channels with center frequencies of 5280, 5400 and 5405 kHz. As in other parts of the world where 5 MHz operation is permitted, the practice is to use Upper Sideband for voice transmissions on these channels with a radio dial readout of 5278.5, 5398.5 and 5403.5 kHz respectively. CW stations are encouraged to use the bottom 300 Hz of the channels as this permits the use of the channel for SSB at the same time. (IRTS)

**

RESTRUCTURING: SPAIN GIVES HAMS 1.8 MHZ AND 70 MHZ BANDS

Amateurs in Spain will be getting new allocations at both 70 MHz and 1.8 MHz allocations. This, according to an announcement posted on the website of the Spanish national ham radio society, the URE.

The post says that the new Spanish Radio 4 metro allocation is 70.150 - 70.200 MHz with a 10 watts Effective Radiated Power restriction. Spanish Amateurs will be permitted to operate 160 meters on 1 point 810 to 1 point 830 and 1 dot 850 to 2 dot 000 MHz during specified international contests.

The announcement in Spanish is on-line at www.ure.es. An English translation can be found at tinyurl.com/5pcs25 (Southgate)

**

RADIO LAW: FCC LIMITS DART ALASKA ALLOCATION AT 7 MHZ

A win for the ARRL in its request that an Alaskan digital radio experimental broadcast license be modified to exclude operation in the 40 meter band, but one that may not have been necessary. This with word that the Federal Communications Commission has modified the license for the WE2XRH granted to Digital Aurora Radio Technologies for Digital Radio Mondiale trials in the far North. Amateur Radio Newsline's Don Carlson, KQ6FM, has more:

--

As we reported last week, on October 20th the American Radio Relay League had asked the FCC to delete the 7.1 to 7.3 MHz amateur service segment from the 7.1 to 7.6 MHz allocation that it had approved to Digital Aurora Radio Technologies. This, as one of several segments originally authorized to its Digital Radio Mondiale transmission experiment.

Acting uncharacteristically quickly, on October 24th the FCC limited the station's license to 7.3 to 7.6 MHz if it wanted to try 40 meter operations. All other spectrum allocated for the experiment in the 4.5 to 5.1 and 9.25 to 9.95 MHz were not affected.

However, it turns out that the main reason for the quick action by the FCC may have had nothing to do with what hams wanted. Rather, the word is that it gave the agency a chance to correct a clerical error made in the original license grant.

According to several sources, the reach of the 7 MHz Digital Aurora Radio Technologies frequency assignment down to 7.1 MHz was never an issue in the Digital Radio Mondiale broadcasting community. Sources say that it has always been widely understood that no domestic Digital Radio Mondiale experiment or service will be launched in any ham radio band.

So what happened? The Digital Aurora Radio Technologies antenna system bandwidth as specified in its filing to the FCC shows that it had the capability to operate down to 7.1 MHz . In an oversight, that became authorized as the lower band edge for the experimental grant until the ARRL petitioned the FCC to change it.

Soon after the ARRL filed its petition Digital Aurora Radio Technologies readily agreed to the change. Also to be noted is that none of the technical data that Digital Aurora Radio Technologies supplied to the FCC proposed transmissions in any amateur service band.

None the less the ARRL apparently felt compelled to act now if for no other reason than to protect ham radio operations on 40 meters from the potential incursion that might happen at a later date. This, if another broadcaster or service came along that did not want to play be the established gentlemen's agreement rules.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

--

The bottom line. Some on-line critics of the ARRL claim that this action and other recent stands by the League may have ruffled some political

feathers in the nations capital. What these hams tend to forget is that protecting the ham radio spectrum -- and doing so at any cost -- is the ARRL's job.

For more insight on this subject, see http://klixie.com/26mhz/index.php?id) (ARNewsline(tm) from ARRL press release and other sources.)

RADIO HERITAGE: MIKE DORROUGH KO6NM TRYING TO SAVE DELANO VOA RADIO SITE

Famed inventor Mike Dorrough, KO6NM, is taking part in efforts to save the retired Voice of America facility in Delano, California. Dorrough says that he is trying to enlist the help of Delano city officials to restrain demolition of the facility.

According to KO6NM, the Delano V-O-A facility is part of America's broadcast history and the greatest radio antenna landmark in California, if not the world. He is urging the city of Delano to use whatever power it has to keep the wrecking ball from destroying the most important historical, educational and strategic radio installation in the world today.

Delano Mayor Sam Ramirez says that he had not been aware that the facility might be removed. Dorrough says that there is only one Voice of America facility intact in existence, and it is in Delano. It is also the last shortwave broadcast facility of its kind.

Mike Dorrough is a long-time electronics manufacturer in the broadcast and audio business. He is a recipient of several awards including the National Association of Broadcasters Radio Engineering Achievement Award, a technical Emmy and an Academy Award. (RW)

**

RADIO HERITAGE: CELEBRATING THE LIFE OF LENORE JENSEN, W6NAZ

A special radio club screening of an episode of the famed television show "This is Your Life" exploring the life and ham radio career of the late actress and ham radio operator Lenore Kingston Jensen, W-6-N-A-Zed, has been announced for Friday, February 20th, 2009, This, to her longtime radio club to celebrate her recent induction into the CQ Ham Radio Hall of Fame. Bill Pasternak, WA6ITF, is in the newsroom with more:

--

The event is being produced by Cliff Chen, AC6C, and will be hosted by the San Fernando Valley Amateur Radio Club. This is an organization that both Lenore and her husband Bob Jensen, W6VGQ, called their home radio club and belong to for many years.

For those of you who never heard of Lenore Jensen who was known professionally as Lenore Kingson, a bit of background. Starting in the 1930's and continuing through most of her career, W6NAZ was a well known

character actress in radio, television and in some movies. She began her career in radio drama in Chicago. Eventually he came to Hollywood where she appeared on such top rated TV shows as "The Munster," "Petticoat Junction," "Love American Style" and "Ironside" to name only a few.

But it was not her career in the entertainment world that brought her to "This Is Your Life." Rather, it was brought to the attention of producer and host Ralph Edwards that the wife of the show's Director -- the late Bob Conn -- was a ham operator who had provided over 60,000 phone patches to overseas service personnel. It was an accomplishment that Edwards wanted to honor and did so on national Television before an audience estimated in the millions.

According to AC6C, he was able to procure a DVD of the July 26, 1961 show from Ralph Edwards Productions. He calls the episode very inspiring, noting that for years after it aired that people would approach W6NAZ at conventions and hamfests to tell her that they had become radio amateurs because of it.

AC6C says he is looking forward to this event honoring this very special lady of ham radio.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, who was honored to have Lenore Jensen, W6NAZ, as a friend for many years. I'm reporting from Los Angeles for the Amateur Radio Newsline.

--

Clif Chen, AC6C, has arranged for the radio club screening to be held in the Penthouse Auditorium of Northridge Hospital Medical Center. It is located at 18300 Roscoe Beloved in Northridge, California. The show will begin on February 20th at 7:30 P.M. Pacific Standard Time. (AC6C)

**

HAM RADIO BUSINESS: RADIO OPERATIONS CENTER DIGITAL DESKTOP FROM CSS

Turning to the ham radio business scene, Creative Services Software, Inc. has announced the availability of the Radio Operations Center Digital Desktop. Formerly called Pac Term for Kantronics TNCs and P K Term for Timewave and AEA products this new version includes a number of new features and enhancements in addition to re-branding as Creative's' new Radio Operations Center product label. Lots more about Radio Operations Center Digital Desktop is on-line at www.cssincorp.com. (CSS release)

**

THE SOCIAL SCENE: WELLINGTON NEW ZEALAND IN MARCH 2009

On the social scene, word from down-under that the annual Wellington New Zealand Radio EXPO-09 is to be held on March 28th of 2009. The show is sponsored b the Combined Wellington Amateur Radio Expo Committee. In addition to usual manufacturer and retailer displays there will also be swap-meet like trading tables of used equipment. Refreshments will be

available in the main hall. (ZL2HO)

**

NAMES IN THE NEWS: FIRST FRED FISH MEMORIAL AWARD PRESENTED TO W5FF

Lee Fish, K5FF, accepted the first Fred Fish Memorial Award that was awarded posthumously to her late husband Fred, Fish, W5FF, in Ardmore, Oklahoma, on October 25th. The presentation was made to her by ARRL West Gulf Division Director Coy Day, N5OK. In her remarks, Mrs. Fish recalled times at the early Central States VHF conferences which she and Fred had attended. (VHF Reflector)

WITH NEWSLINE: ANDY WRAPS UP THE 2007 THANK YOU LIST

Now with some thank you's to those who support these newscasts through the end of 2007, here's Amateur Radio Newsline's Support Fund Administrator, Andy Jarema, N6TCQ

--

Our thank-yous start in October of last year with Newsline's long-time friend Carole Perry Parker, WB2MGP, Staten Island, NY, whose QSL card with the teachers apple on it is proudly displayed on our shacks wall.

Richard Leschack, KB1OCN of Bedford, MA; William Smith, W7GHT of Boise, ID ; The Catalina Island Repeater Association, AA6DP; The South Orange Amateur Radio Association of Mission Viejo and Bob Paquette, W6ZPL of La Habra. Regular contributors include Benton Bonney, W4PE of Orlando; Joseph Bartzi, Jr., KC8DKF of Columbus, OH; William Walters, WA2IBM, and Scott Hensley of the Area Communications Team, both in San Jose.

Via PayPal we heard from Scott Currier, KT1B in Haverhill, MA.

In November we heard from the Sequoia Amateur Radio Group, N6KRV in Lake Isabella, CA, and a matching grant from Don Jefferson, host of their weekly nets on his KC6OCA 145.54 repeater.

In December we heard from: Jim Hansen, KG6ZDP and the West Coast ARC in Huntington Beach, CA

As we enter this season of Thanksgiving, we at the Amateur Radio Newsline are thankful for you, our loyal listeners, who do your part to help keep these weekly newscasts stay on the air. We've made it easy for you through PayPal on our website, arnewsline.org, and at the address you will hear at the end of this broadcast.

I'm Andy Jarema, N6TCQ.

--

Andy will be back with us in the near future with more than-you's to those who have contributed to the support fund during 2008. (ARNewsline(tm)

CHANGING OF THE GUARD: JOHN PAOLI, KG6GCB - CHIEF ENGINEER OF KFI - S.K.

John Paoli, KG6GCB, the Chief Engineer of KFI - AM, in Los Angeles, has passed away. Paoli, who lived in Northridge, California died on Sunday morning, October 19th.

According to the CGC Communicator, either Paoli or his wife had fallen ill and they had gone to the St. Joseph Medical Center's emergency room in Burbank. That's John Paoli unexpectedly collapsed and could not be revived.

According to CGC Communicator editor Bob Gonsett, W6VR, the passing of John Paioli is a real tragedy for the Los Angeles broadcast community. Especially for those who have had the privilege of working with this extraordinarily personable and gentle engineer.

Services for John Paioli were held on Friday, October 24th at Saint Sebastians Church, in Greenbrae, California. (CGC)

**

HAM RADIO IN SPACE: ANOTHER UPDATE ON XW-1

We have an update on the upcoming Chinese amateur radio satellite update XW-1. According to Michael Chen BD5RV, the XW-1 will be launched into a Sun synchronous orbit to an altitude: 499 kilometers with an inclination of 98 degrees and an orbital period of 94 minutes. It will be powered by a 16 amp hour Lithium Ion battery that will recharge off solar cells that will be a part of the spacecraft.

XW-1's ham radio payload will consist of a Morse beacon operating at 435 MHz plus a linear transponder for 2 meter and 70 centimeter operations and an FM repeater operating crossband from 2 meters also up to 70 centimeters. A digital store and forward transponder on these same bands round out the gear which Chen says will way in at 5 point 2 kilograms. That come out to be about 11 pounds. (ANS)

**

HAM RADIO IN SPACE: NEW AMSAT BOARD ANNOUNCED

Meantime, AMSAT Board of Directors approved a slate officers to serve the 2008 to 2009 administrative year. At its meeting in Atlanta on October 23rd, Barry Baines, WD4ASW, of Westborough, Massachusetts was confirmed as president. Serving with him will be Drew Glasbrenner, KO4MA, as Vice President of Operations: Gould Smith, WA4SXM as Vice President of User Services: Gunther Meisse, W8GSM in the position of Treasurer and Lee McLamb, KU4OS as both Secretary and Vice P resident of Special Projects. Frank Bauer, KA3HDO, continues on as Vice President Human Spaceflight. Rounding out the team is Martha Saragovitz who continues as Manager of the AMSAT North America Washington home office. (KU4OS)

**

EMERGING TECHNOLOGY: HD RADIO HIGHLIGHTED AT CONSUMER ELECTRONIC DESIGN EXPO

HD Radio backers say that this year's Custom Electronic Design & Installation Association Expo will definitely help them showcase new HD Radio receivers. This after almost two dozen IBOC models were on display at the showcase event held in Denver, Colorado last month.

At this years event audio manufacturers such as Denon, Marantz, Niles Audio, Onkyo and Polk offered a lineup of custom-install, home theater receivers and processors that feature HD Radio technology. And seven new products were unveiled from companies as prestigious as Integra, McIntosh Laboratories and Yamaha. Also, iTunes tagging was supported by some models on display.

IBiquity Digital President Bob Struble described the offerings as being a host of core high-end and mid-range components. Struble added that the adoption of HD Radio technology by consumer electronics companies in the advanced home audio system arena is yet another proof point in the overall manufacturer dedication to offering consumers a variety of HD Radio products that enhance their entertainment experience across a wide-ranging price point spectrum."

The Custom Electronic Design & Installation Association Expo is a trade show for the residential electronic systems industry. (Press release)

**

EMERGING TECHNOLOGY: FCC REVIEWING IBOC POWER INCREASE

Meantime, Radio World reports that the digital power increase proposal for HD radio now is getting a closer look. This as the Federal Communications Commission asks for public input on the feasibility of increasing FM IBOC transmitted power levels.

According to the newsletter, a group of 18 broadcasters and four IBOC transmission manufacturers have asked the commission to let stations voluntarily increase FM IBOC power up to 10 dB. This, from the current level of 1 percent of a station's authorized analog power to a maximum of 10 percent of a station's authorized analog power. Their intent is to

boost digital power levels for better building penetration and mobile and portable reception. IBiquity Digital filed studies in support of the request.

But one broadcaster is saying not so fast. National Public Radio has submitted its recently completed research on digital radio coverage and interference. Funded by the Corporation for Public Broadcasting its studies concluded that such an increase could result in interference to reception of first- and second-adjacent channel FM outlets. Because of this National Public Radio argues that further testing is necessary.

Either way, the FCC is seeking comment on Mass Media Docket No. 99-325everything involved in this issue no later than November 28th. Reply comments are due in the Commissions hands no later than January 4th 2009. (RW)

**

THOSE RARE ONES: WILLIS ISLAND OPERATION CLOSES A DAY EARLY

The Willis Island DXpedition went QRT almost a day early. This after weather reports predicted heavy winds across the island on their planned departure date.

Operation was supposed to continue Sunday, October 26th with camp breakdown on Monday the 27th. But due to heavy winds expected on Monday, the group elected to shut down at 22:00 hours U-T-C on the 25th and use the 26th to strike the antennas, pack the gear, take down the complete camp and transport everything to the boat for the ride home.

The entire team did take part in the first 24 hours of the CQ World Wide SSB Contest with three station positions operational. The remaining station positions did remain available for WARC operation.

According to the teams press release, the decision to end operations early was to permit a controlled shutdown and a secure trip back to the Australian mainland for all members and all of the equipment that had gone to Willis to bring that rare spot on the air. (Various DX sources)

**

DX

In DX, word that F4EGX will be working at the French base on Petrel Island from early November through mid of December. He will be using SSB and signing FT5YI during his spare time. No specific bands or frequencies have been mentioned. QSL as directed on the air.

VK2MRP, will be on from Antarctica's Davis Base from November 1st through March 7th of next year. His callsign will be VK0BP but he cannot say when he will have time to operate. If you do make contact, QSL via VK2CA.

And XE1MO is expected to show up portable ZA1 from Albania. He will be there November 1st through the 9th using SSB on 40, 20, 15m and 10

meters. QSLs direct to XE1MO.

Lastly, ZS6AVM, will be on from Swaziland signing 3DA0VM on 40 through 10 meters during all of November. Dave says he will be using a Flex-5000A Software Defined Radio. QSL cards are requested only direct to his home call ZS6AVM.

(Above from various DX news sources.)

**

THAT FINAL ITEM: THE BPL HAMNDICAP RACE

And finally this week a bit of racetrack radio humor from down-under. Its from the Wireless Institute of Australia's weekly ham radio news bulletin but we simply call this story the 2008 B-P-L Handicap:

--

Audio only. Hear it in thew MP3 version of this weeks nrewscast that can be downloaded at www.arnewsline.org

--

What can we say -- other than that track announcer sounds more than a bit familiar. Could that have been Jim Linton, VK3PC? Well, only the WIA News knows for sure.

(WIA News)

==> SKYWARN RECOGNITION DAY SET FOR DECEMBER 6

The 10th Annual SKYWARN Recognition Day (SRD) Special Event will take place Saturday, December 6, 2008 <http://hamradio.noaa.gov/>. SRD is co-sponsored by the ARRL and the National Weather Service (NWS) as a way to recognize the commitment made by Amateur Radio operators in helping to keep their communities safe. According to SRD Coordinator David Floyd, N5DBZ, Amateur Radio operators can visit their local participating NWS office <http://www.crh.noaa.gov/hamradio/participating_offices.php>, working as a team to contact other hams across the world throughout the 24 hour event.

The idea for the first SRD took shape in the summer of 1999. Meteorologist-in-Charge of the Goodland, Kansas NWS office Scott Mentzer, N0QE, tried to find a way to recognize the valuable contributions storm spotters make to the National Weather Service. "Since many of those storm spotters were also hams," Floyd said, "it seemed like a natural fit for the recognition to be centered on Amateur Radio."

With the approval of NWS headquarters and a commitment to participate from many local NWS offices across the country, the first National Weather Service Special Event took place on November 27, 1999. "At the end of the event, an amazing 15,888 QSOs were logged, with contacts made to all 50 states and 63 countries," Floyd recounted. "The Des Moines forecast office took the honor of making the most contacts of any office that first year with 761 QSOs, and went on to lead the pack until 2003 by logging between 1300-1500 contacts each year!"

Floyd said that feedback from that first event was "overwhelmingly positive" from both the NWS staff and the local ham clubs: "Suddenly there was incentive for more NWS staffers to either obtain a license or upgrade so that more people could work ham radio during severe events. In addition, many club members had never visited an NWS office before. When they came for the special event, they learned the value of their reports and how they were used in conjunction with existing technology."

And so began an annual tradition. The following year, 85 of the 122 NWS offices -- almost 70 percent -- participated in the event, making nearly 24,000 QSOs. "Perhaps the most unusual contact occurred in 2000 with an airliner 39,000 feet above Utah," Floyd said. "The pilot ended the QSO with a request for a 'spot weather forecast' for his arrival at Salt Lake City airport."

In 2001, the name of the event was changed to SKYWARN Recognition Day, a name Floyd said better relayed what the day was all about: "Each year since the inception of SRD, the number of NWS offices and local ham clubs participating has increased, until now more than 100 offices sign up each year to take part. The most contacts made during any SRD occurred in 2006 when -- thanks to the staff and local hams in the Grand Junction, Colorado area -- 1640 QSOs were logged!"

Station call signs have also changed over the years. Floyd said that some NWS offices and clubs apply for a special event call sign, "such as W3B in Brownsville or N0Y in Aberdeen, South Dakota. Other call signs hint at office location, including WX9GRB in Green Bay and WX4NHC at the National Hurricane Center. Still others represent more of the big picture, as in KC0SKY in Pleasant Hill, Missouri."

Floyd said that as SKYWARN Recognition Day has grown throughout the years and is mainly an SSB event, he has seen a greater use of digital communications in addition to CW, RTTY and packet radio: "Each year, more and more contacts are being made using EchoLink and Winlink."

2008 SKYWARN Recognition Day will be held on December 6 from 0000 UTC-2400 UTC. Last year, contacts were made in all 50 states and 40 countries during the 24 hour event. If you haven't joined in the fun, make 2008 your year to do so!
==> OHIO HAMS DISCOVER, FIX "DITTERS" ON 40 METERS

Silent since the summer of 2000, "ditters" have been heard once again <http://www.arrl.org/news/stories/2000/07/28/2/> on 40 meters by hams in North Carolina. According to ARRL Field and Regulatory Correspondent Chuck Skolaut, K0BOG, hams in that state contacted him on October 22 complaining of hearing a continuous string of "dits" on 7.0574 MHz. "We informed the FCC HFDFing station of the situation and asked if they could locate the approximate area of the 'dits' so we could get this resolved as soon as possible," Skolaut said. "They responded promptly and said it was coming from Westerville, a town just north of Columbus, Ohio."

Once the general location had been pinpointed, Skolaut called on ARRL Ohio Section Official Observer Coordinator Rick Swain, KK8O for assistance. Swain immediately alerted his team of Official Observers (OO) to check out the situation. "Neither I nor the OOs could hear the transmitter," Swain said in his report. "In a telephone conversation with one of the OOs near the target area, he suddenly stated that he could hear it, but that the signal was at the noise level, about S2 to S3. At just about the same time, I could hear it as well at my location [about 50 miles from the target area] -- just above the noise level -- for about five or ten seconds, then it disappeared."

Swain also placed a call to Assistant Section Manager Bill Carpenter, AA8EY. "Bill lives within the target area. I briefed him on the situation and he went right to his station," Swain said. "Bill checked the frequency and told me he was hearing [the 'dits'] at about S9. He said he thought he might know who it could be and that would make some calls."

Around 7:30 AM on October 23, Swain checked the frequency and found no signal. "I assumed that either Bill had found the transmitter or the owner came home, found it transmitting and turned it off," he said. "Later that morning, Bill sent me an e-mail saying that the signal was back on and about S7. I called Bill's house and left a message telling him I was on my way to Westerville to track down the signal. If he wanted to ride along with me while I looked for it, he was more than welcome to come." Skolaut said the signal was also heard in Newington that day.

When Swain arrived in Westerville, he had a list of the names and addresses of 172 licensees in the area, as well as a general idea of where the signal should be, based on the data from the FCC's HFDFing station. He also had his HF radio, an all-band screwdriver antenna, a GPS receiver and a VHF radio for information and directions.

"I drove around the area checking the signal and noted that it was about S9 and climbing," Swain said. He and Carpenter met up and continued the

search together. About 15 minutes later -- with Swain driving and Carpenter giving directions -- "we noted that the signal was 30 over S9 and Bill had me make a left turn at the next street, saying that there was an address on the list we should check out. We stopped at that address, but no luck."

Swain said he then injected 30 dB of attenuation and continued to drive in the same direction: "The signal was now reading 20 dB over S9 with the attenuator still on. We turned down the next street and the signal rose another 20 dB. I pulled into a parking lot and made a 360-degree turn as to determine the signal's direction. The turn indicated that we should proceed to a newly constructed housing area adjacent to the parking lot."

Swain and Carpenter then made their way over to the housing development and found that signal peaked. "Bill checked the list and found a ham lived on the street we were on, so we stopped and knocked on the door, but no one answered," Swain said. "We checked out the backyard and saw a 4-band trapped vertical antenna. We went next door and spoke to the neighbor and told him who we were and what we were trying to do."

With help from the neighbor, Swain contacted the ham at work and explained the situation. The ham told the neighbor how to get in the house and where they would find the transmitter. "We went in, found the transmitter in operation and turned it off," Swain said. "I noticed the ham had a large cat lounging near the transmitter and assumed the cat could have leaned up against the keyer paddle and started the transmitter. No other explanation could be possible without the owner hearing the transmit relay clicking."

When Swain and Carpenter left the house, they listened to the receiver and discovered the signal had disappeared.

"This was a great example of coordinated cooperation by the FCC and OOs to resolve a problem in a timely fashion," Skolaut said. "The DFing station told us that hopefully the OOs could handle it as the FCC District Office was unable to work on the case at this time."

Calling this a "splendid example of cooperation," ARRL Great Lakes Division Director Jim Weaver, K8JE, echoed Skolaut's praise: "I believe the response to the situation was as fine an example of symbiotic relationship between member-staff-FCC-staff-field organization as one might find. Extremely well done by all hands."

==> THE ARRL VEC: MORE THAN JUST AMATEUR RADIO EXAMS

When you think of ARRL's Volunteer Examiner Coordinator Department (VEC) <http://www.arrl.org/arrlvec/>, Amateur Radio licensing exams are probably what come to mind. Questions regarding exam requirements, exam accommodations, exam test locations, exam question pools and Volunteer Examiner support are handled by the League's VEC department. According to ARRL VEC Manager Maria Somma, AB1FM, the ARRL VEC has been busy meeting the needs of the Amateur Radio community since 1984. "Helping a

person become a radio amateur or upgrade their existing license is what we do best, but that's not all we do," Somma said.

"We provide instruction and support for everyone who wants to get an Amateur Radio license, as well as licensing assistance and procedures for those amateurs seeking upgrades to their current license, regardless of where in the US they may live; some sessions are also provided overseas," Somma explained. "Volunteer Examiners are accredited by the ARRL/VEC; they obtain their training -- and receive ongoing guidance -- from our office by phone or e-mail. They can also access our online VE Manual."

Somma said that the ARRL's VEC Department is also a primary provider for club license questions and applications (club call signs) and vanity call signs. "We only serve in an advisory capacity in this activity, as application must be made (with their appropriate fee) directly to the FCC," she said. "We also handle the 1x1 Special Event call signs, International Amateur Radio Permits (IARP) and ARRL member (or non-member with accompanying fee) FCC license updates and renewals <http://www.arrl.org/fcc/forms.html>."

Since the VE program began in 1984, the ARRL VEC has accredited more than 50,000 Volunteer Examiners. "These VEs have conducted more than 90,000 test sessions," Somma said. "At these sessions, more than 850,000 individuals have taken examinations to earn a license or to upgrade their license privileges. And out of those, 400,000 have had their successful applications submitted to the FCC for new and higher class licenses. Today, the ARRL VEC is the largest of the USA's 14 VECs <http://wireless.fcc.gov/services/amateur/licensing/vecs.html>, representing nearly 70 percent of all exams given."

Somma credits her "skilled, knowledgeable and friendly staff" with the success of the League's VEC department: Assistant VEC Manager Perry Green, WY1O; Pete Warner, K1HJW; Ann Brinius; Lisa Riendeau; Amanda Grimaldi, and China Chaney.

"The ARRL VEC has more than 20 years of service to radio amateurs, operating as a knowledgeable information source for a wide-range of licensing issues," Somma said. "Look beyond the exams -- we're here to help!"

==> ARRL INVITES NOMINATIONS FOR 2008 INTERNATIONAL HUMANITARIAN AWARD

Nominations are open for the 2008 ARRL International Humanitarian Award <http://www.arrl.org/FandES/field/awards/humanitarian.html>. The award is conferred upon an amateur or amateurs who demonstrate devotion to human welfare, peace and international understanding through Amateur Radio.

The League established the annual prize to recognize Amateur Radio operators who have used ham radio to provide extraordinary service to others in times of crisis or disaster. A committee appointed by the League's President recommends the award recipient(s) to the ARRL Board,

which makes the final decision.

The committee is now accepting nominations from Amateur Radio, governmental or other organizations that have benefited from extraordinary service rendered by an Amateur Radio operator or group. Amateur Radio is one of the few telecommunication services that allow people throughout the world from all walks of life to meet and talk with each other, thereby spreading goodwill across political boundaries. The ARRL International Humanitarian Award recognizes Amateur Radio's unique role in international communication and the assistance amateurs regularly provide to people in need.

Nominations should include a summary of the nominee's actions that qualify the individual (or individuals) for this award, plus verifying statements from at least two people having first-hand knowledge of the events warranting the nomination. These statements may be from an official of a group (for example, the American Red Cross, The Salvation Army or a local or state emergency management official) that benefited from the nominee's particular Amateur Radio contribution. Nominations should include the names and addresses of all references.

All nominations and supporting materials for the 2008 ARRL International Humanitarian Award must be submitted in writing in English to ARRL International Humanitarian Award, 225 Main St, Newington, CT 06111 USA. Nomination submissions are due by December 31, 2008. In the event that no nominations are received, the committee itself may determine a recipient or decide to make no award. The winner of the ARRL International Humanitarian Award receives an engraved plaque and a profile in QST and other ARRL venues.

==> ASK PERRY: WHY IS THE ARRL IN CONNECTICUT?

Every once in a while, ARRL Archivist Perry Williams, W1UED -- a rich source of information about the early days of the League -- runs across a question that really needs an answer. Earlier this month, someone posed this question to Perry: Why was Connecticut chosen as the site for ARRL?

"To answer that question," Perry explained, "consider a parable: Why did the tree choose to grow in this forest? Because that is where the seed fell on fertile ground. The seed that became ARRL fell on Hartford, Connecticut in 1914. When it sprouted, it was cultivated initially by two men: Hiram Percy Maxim, 1WH (he became W1AW after World War I), and Clarence D. Tuska, 1WD, who was still in his teens when the League began.

"Maxim was an inventor in a family of inventors, an industrialist. He was founder of the Maxim Silencer Company, making devices to keep firearms and engines quiet, as well as a principal in a company involved first in making bicycles and then autos. He was also a writer with an early interest in motion pictures (he was also founder of the Amateur Cinematographic League) and on and on. Most of these activities were in

or near Hartford, where he lived with his family.

"Tuska manned the hoe and trowel around the ARRL seedling. Soon after the ARRL's founding, Maxim settled in as President, an office he held until his death in 1936. In those early days, Tuska served as Secretary. Together, Maxim and Tuska founded the magazine QST as a private venture in 1915 out of their own pockets; Tuska was its Editor until the United States got into WWI and amateurs were taken off the air. Tuska closed down the 'offices' of ARRL and QST -- they were in his mother's kitchen -- and joined the Army." Williams said that the story doesn't end here -- to find out more, please see "Two Hundred Meters and Down," by Clinton B DeSoto, W1CBD (SK) <http://www.arrl.org/catalog/?item=0011>.

Williams continued: "By the time the Tree had grown to the point to merit relocation elsewhere (this issue has been examined many times by the ARRL's elected, unpaid Board), transplanting it never came out as feasible: The Hartford-area roots were too deep."

==> ARRL MEMBERSHIP NEWSLETTERS, BULLETINS AND NOTIFICATIONS

Did you know the ARRL offers more newsletters than just The ARRL Letter? One of the many ARRL membership benefits includes other newsletters, such as the ARRL Contest Update (a bi-weekly contest newsletter), the ARES E-Letter (sent monthly, containing public service and emergency communications news), the ARRL Club News, the ARRL Instructor/Teacher E-Letter and the VE Newsletter, just to name a few.

You can also elect to receive news and information from your Division Director and Section Manager (keep in mind that not all Divisions/Sections send notices), as well as W1AW bulletins that relate to DX, propagation, satellites and Keplerian reports. The ARRL also offers a free notification service to members, letting them know when their membership and license are due to expire.

Sign up for these newsletters, bulletins and notifications on the Member Data page of the ARRL Web site <http://www.arrl.org/members-only/memdata.html>.

==>SOLAR UPDATE

Tad "But give me your Sun from yonder skies!" Cook, K7RA, this week reports: Solar Cycle 24 is slowly building momentum. We saw sunspots for eight days in a row -- October 10-17 -- then 12 days of no spots. Another sunspot -- number 1007 -- appeared on October 30 from Solar Cycle 24. It is a high latitude sunspot and may provide some fun for this weekend's 75th running of the ARRL CW Sweepstakes. Sunspot numbers for October 23-29 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 67.2, 67.5, 67.5, 66.9, 67, 67.1 and 66.7 with a mean of 67.1. The estimated planetary A indices were 3, 2, 1, 4, 1, 4 and 11 with a mean of 3.7. The estimated mid-latitude A indices were 3, 0, 1, 3, 1, 5 and 16 with a mean of 4.1. Geophysical Institute Prague predicts "Relative sunspot number in the range 0-25" for October 31-November 6. They forecast unsettled geomagnetic conditions for today, October 31,

quiet to unsettled November 1, quiet conditions November 2-5 and quiet to unsettled November 6. It is possible that around November 4 we may see a return of sunspot number 1005. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Robert Browning's "The Patriot" <http://www.poemhunter.com/poem/the-patriot/>.

==>IN BRIEF:

* This Weekend on the Radio: This week, look for the 75th running of the ARRL Sweepstakes Contest (CW) on November 1-3. The NCCC Sprint is October 31 and the IPARC Contest (CW) is November 1. The Ukrainian DX Contest is November 1-2. The IPARC Contest (SSB), the High Speed Club CW Contest and the DARC 10 Meter Digital Contest are all November 2. Next week is the NCCC Sprint on November 7. The WAE DX Contest (RTTY), the JIDX Phone Contest, the OK/OM DX Contest (CW), the Kentucky QSO Party and the CQ-WE Contest are all November 8-9. The SKCC Weekend Sprintathon is November 9 and the RSGB 80 Meter Club Sprint (SSB) is November 13. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, November 9, 2008, for these online course sessions beginning on Friday, November 21, 2008: Amateur Radio Emergency Communications Level 2 (EC-002); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cep@arrl.org>.

* 2008 Field Day Results Posted: The results from this year's Field Day are now available online <http://www.arrl.org/members-only/contests/results/2008/FD/>. "The addition of the online ARRL Field Day Locator site was a huge success, as more than 1500 sites were listed in this first year of use," said ARRL Field Day Manager Dan Henderson, N1ND. "When you scan the Online Soapbox <http://www.arrl.org/contests/soapbox>, Field Day continues to be the most popular on-the-air event in Amateur Radio." You can find the results in the Members Only section of the ARRL Web site.

* New ARRL Satellite Book Available: "The ARRL Satellite Handbook" by QST Editor Steve Ford, WB8IMY, brings the thrill of satellite communications within your reach <http://www.arrl.org/catalog/?item=9857>. Filled with understandable descriptions and illustrations, this book includes all the tools you need to participate in this exciting field. This very readable guide was designed to give a broad introduction to the subject of satellite communications, while providing the practical fundamentals you need to explore, track and operate ham radio satellites on your own. Since the pioneering days of satellite communications, ham radio operators have been along for the ride -- building, launching, and operating satellites. You can experience this technology firsthand using today's fleet of Earth-orbiting ham radio satellites. Including content by satellite expert Martin Davidoff, PhD, K2UBC, this book is sure to be a hit with both new and experienced satellite enthusiasts. Be sure to get your copy of "The ARRL Satellite Handbook" today!
* Spanish Hams Receive New Frequency Privileges: The Union de Radioaficionados Espanoles (URE) <http://www.ure.es/>, Spain's IARU Member-Society, reported that as of October 24, 2008, that country's Secretaria de Estado de Telecomunicaciones y para la Sociedad de la Informacion (SETSI) approved an expansion on 160 meters during certain events, such as international Amateur Radio contests <http://www.arrl.org/news/files/Resolucin1800y70MHz.doc>. The new allocation, 1.810-1.830 MHz, as well as 1.850-2.000 MHz, will be available for the 2009 ARRL 160 Meter Contest, the 2009 King of Spain Contests (both SSB and CW) and the 2009 CQ 160 Meter Contest (both SSB and CW); it was also allowed for the CQ Worldwide DX Contest (SSB) earlier this month. In addition, Spanish hams were also granted privileges on the experimental portion of the 4 meter band -- 70.150-70.200 MHz running 10 W ERP -- until April 25, 2009. -- Thanks to "The Daily DX" for the information

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers

informative features and columns. ARRL Audio News
<http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast"
compiled and edited from The ARRL Letter. It's also available as a
podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole
or in part in any form without additional permission. Credit must be
given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

Amateur Radio Newsline(tm) Report 1630 - November 7, 2008

Amateur Radio Newsline report number 1630 with a release date of Friday, November 7th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The first ever real time ISS packet QSO between Hawaii and the U-S mainland finally takes place, a California jury recommends death for the killer of KD7VWJ and KD7VWK, the US Supreme Court hears testimony on the issue of broadcast indecency and D-Star comes to a remote spot on the globe. Find out the where on Amateur Radio Newsline(tm) report number 1630 coming your way right now.

RADIO RECORDS: FIRST MAINLAND TO HAWAII IS PACKET CONTACT MADE

The first real time packet Hawaii to U-S mainland QSO and information exchange via RS0ISS digipeater on board the International Space Station has taken place. Bill Pasternak, WA6ITF, is in the newsroom with the details:

--

The contact occurred at 18:03 UTC on November 1st .when Scott Avery, WA6LIE, in Salinas, California made contact with Ron Hashiro, AH6RH, in Honolulu, Hawaii.

According to an e-mail from Avery, ever since ISS packet and voice system was activated, he has been looking for a partner on the east side of the Big Island of Hawaii to try such a contact attempt. So he sent out broadcast blind e-mails to all hams in the area.

About 3 years ago he met up with AH6RH who shared the same goal. For the past few years the two have been trying to make this first contact. Between ISS packet being off the air, and limited times to try it took a bit of time to make it happen.

But persistence paid off and the two did finally make the path on November 1st when the hooked up on 145.825 simplex on a very low pass of the ISS. which was barely above the horizon. Even more astonishing is that their mutual window of opportunity to complete the contact was only about one minute and 20 seconds or so. Hashiro says it all went better than either he WA6LIE could have hoped for:

--

AA6RH: It was a real pleasure partnering and working with Scott. We got the job done. We had it all scheduled for a minute and 20 seconds and we had almost a whole minute left over for sending a couple of extra packets. So I really enjoyed making that record contact with Scott."

--

Hashiro tells Newsline that both he and Avery have been longtime supporters of communications with and through the I-S-S ham radio stations. He notes that when Space Tourist Charles Simonyi, K-E-7-K-D-P was on the International Space Station on April 11, 2007, he happened to be the first person to talk with him. Minutes later as the ISS drifted towards the United States West coast Avery was the first California and mainland station to make contact. Now the Avery and Hashiro have made their mutual dream of making the first Hawaii to U-S mainland I-S-S packet contact come true.

For the Amateur Radio Newsline. I'm Bill Paternak, WA6ITF, in Los Angeles.

--

Hashiro notes that this was the first mutual window, and first weekend both he and Avery could try for a contact after completing the support for the Richard Garriott, W5KWQ, mission a little more than a week ago. (ARNewsline(tm))

THE HAWKES MURDERS: JURY RECOMMENDS DEATH FOR KILLER OF KD7VWJ AND KD7VWK

A jury has reached its decision ion the proper penalty to impose on the man that they convicted of killing two ham radio operators off the coast of Newport Beach, California. Amateur Radio Newsline's Bruce Tennant, K6PZW has their judgement:

--

A jury has recommended death for a man convicted of murdering two ham radio operators by binding them to an anchor and throwing them into the ocean off Newport Beach. News reports say that twenty-nine year old Skylar Deleon sat motionless on Thursday, November 6th as the jury announced its decision following nearly two days of deliberation in Orange County California Superior Court.

Deleon was convicted last month of three counts of first-degree murder, which included the 2003 death of Anaheim resident John Jarvi and the killings of Tom and Jackie Hawks, KD7VWJ and KD7VWK.on their yacht in 2004. Deleon killed the Hawks in 2004 after feigning interest in buying their nearly half-a-million dollar yacht. Prosecutors say he overpowered them on a test cruise, tied them to an anchor and tossed them into the Pacific Ocean as they begged for their lives. The Hawks bodies were never found. Deleon was also convicted of killing John Jarvi, whom he met in a work prison furlough program while serving time for burglary

The penalty phase of the trial included six days of statements from attorneys, victims' relatives, Deleon's family and psychiatrists. Each offered differing opinions on the role child abuse has on a person's development. But the prosecutor urged jurors to recommend death for Deleon for the cruel, callous way he carried out the killings. In the end the jurors agreed with the prosecutor.

Outside the courtroom the jury of seven women and five men also issued a statement calling their recommendation the only reasonable outcome. This, given the evidence presented at trial. The jurors also extended their condolences to all concerned and hope that their decision will help them to heal.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Under California law, formal sentencing of Deleon by the trial judge will take place at a later date. (ARNewsline(tm) from published news reports)

**

RADIO LAW: SUPREME COURT TO CONSIDER INDECENCY ON THE AIR

The Supreme Court has heard arguments for and against the FCC's rules governing broadcast indecency and profanity. This, as the justices carefully avoided using any of the two four-letter expletives at the heart of the case.

During the 60 minute hearing on Tuesday, November 4th the court reviewed broadcast indecency standards for the first time in 30 years In considering the policy that subjects broadcasters to fines for airing a single expletive blurted out on a live television show, several liberal justices seemed concerned over how broadcasters could prevent dirty words from being aired at live events like sports contests. They also questioned whether the words might have other meanings beyond sexual or excretory connotations. On the other side some of the conservative justices appeared supportive of the crackdown adopted by the Federal Communications Commission against the one-time use of profanity on live television when children are likely to be watching.

The case is being closely watched by almost all radio service users. In the past the FCC has used standards created in any one given service as a basis of regulatory action in others. And even in ham radio circles the use of words deemed patently offensive has in years past have lead to charges being brought against alleged users of such language. A ruling is expected in the first part of next year. (Published reports)

RADIO LAW: ONTARIO CELLPHONE BILL ON HOLD WHILE HAM RADIO PROTECTUON ADDED

Hams in Ontario, Canada can breathe a sigh of relief . This, after government officials in that Province tabled legislation intended to improve road safety by banning the use of some kinds of electronic devices

by drivers.

While the target of Ontario Bill 118 was to regulate the mobile use of cellular communication devices, the draft was written so broadly that many ham became concerned that Amateur Radio mobile operation could be banned by the measure's provisions. As a result, Radio Amateurs of Canada has already taken steps to protect the interests of Amateurs in Ontario province.

First off, the organizations President Dave Goodwin VO1AU has written to Minister Bradley. In his note Goodwin specifically requests that Amateur Radio be excluded from the scope of the bill. This letter also reminds the minister that similar legislation in Newfoundland and Labrador, Nova Scotia and Quebec explicitly or implicitly protects mobile Amateur Radio operation.

Also, a careful reading of the bill reveals that any exemptions will be contained in regulations. As a result, Radio Amateurs of Canada says that it will soon meet with Ontario transportation officials to make the case for protecting mobile Amateur Radio operation. (RAC)

**

SPECIAL EVENT: CELEBRATING MARCOMI MARITIME MOBILE

Listen out for the Italian special event station IY1EY to be activated on CW, SSB, RTTY and PSK 31 on all bands through November 9th. The operation commemorates the radio experiments that Gugliemo Marconi made on his yacht Elettra from 1919 through 1936. The QSL manager for this one is IK1QBT. (TDXB)

**

THE WORLD OF DX: CROZET TO BE ON IN LATE 2009

The 9th most sought after DXCC entity will be activated in 2009 by F4DYW. This as he announces that he will take to the airwaves from Crozet Island between December 1st and November 30th of next year.

Crozet is listed in the top 10 most wanted contacts in the DX Magazine's' listing. F4DYW says that he will use the callsign FT5WO while on Crozet and his activity will be SSB only on 40, 20 and15 meters using 100 watts into dipoles. QSL will go to his home callsign, either direct or by the bureau. Watch for updates at http://f4dyw.free.fr/index.php?langue=uk&contenu=home.php

We will have more DX news later on in this weeks report. (OPDX)

RESCUE RADIO: A QUAKE DRILL TO END ALL DRILLS

Ham radio is about to take part in one of the most intensive mock earthquake drills ever held in California. We have more in this report:

--

A magnitude 7 point 8 earthquake anywhere would be considered a true killer quake. One that strong rippling along California' San Andreas fault line would likely bring widespread devastation to the region. Older buildings would crumble and fall. The power grid would likely fail and normal lines of communications would be cut to millions of residents. Even emergency alerts might be hard to deliver because there would be no Internet access and many of the regions broadcast towers might be felled by the severity of such a quake.

Who would be left to shoulder the communications load? Some experts believe it would fall to the regions ham radio operators to become a lifeline into and out of the area. And that theory will be tested on November 13th in an exercise that will simulate just such an emergency.

The drill is part of the Great Southern California ShakeOut. It's taking place in coordination with the Golden Guardian 2008 exercise of the California Governor's Office of Homeland Security and is expected to be the largest earthquake drill in U.S. history.

To get a better sense of what things will be like after such a powerful quake, those coordinating the emergency response from San Bernardino's central command, will spend two hours without computers, lights or telephone communication. Megan Blaney of the county's Office of Emergency Services says that the region will fall back on its backup or redundant communication. She describes this as being primarily ham radio operators and their own emergency radio gear.

A similar drill will be taking place at the Riverside County Emergency Operation Center in Riverside, California. That's where 120 people will be reacting to the fictional quake. According to spokesperson Zuzzette Bricker, KI6PPO, on November 15th that county will also host two large field-day activities for trained community emergency response teams.

California emergency agencies have had quite a bit of experience reacting to large-scale disasters. Destructive wildfires have provided experience in dealing with sheltering displaced residents, gaining access to damage-affected areas and post emergency cleanup. However, the scope of destruction from a magnitude 7.8 earthquake would dwarf those operations but experts say that's the one to plan for.

For the Amateur Radio Newsline, I'm Burt Hicks, WB6MQV, in Los Angeles.

--

Again, this mock earthquake drill takes place at 10 a.m. November 13th.

(KI6BNP, Press Enterprise)

RADIO HAPPENINGS: SKYWARN RECOGNATION DAY DECEMBER 6

The 10th Annual SKYWARN Recognition Day Special Event will take place from 0000 to 2400 UTC on Saturday, December 6th. Co -sponsored by the ARRL and the National Weather Service, SKYWARN Recognition Day is a way to recognize the commitment made by Amateur Radio operators in helping to keep their communities safe especially during severe weather events. .

The idea for the first SKYWARN Recognition Day took shape in the summer of 1999. That's when Scott Mentzer, N0QE, the Meteorologist-in-Charge of the Goodland, Kansas office, tried to find a way to recognize the valuable contributions storm spotters. As many of those storm spotters were also hams, Floyd felt that it was a natural fit for the recognition to be centered on Amateur Radio.

According to SKYWARN Recognition Day Coordinator David Floyd, N5DBZ, Amateur Radio operators can visit their local participating National Weather Service office. There, working as a team they can contact other hams around the world throughout the 24 hour event. Last year, contacts were made in all 50 states and 40 countries. (ARRL, others)

ENFORCEMENT: FCC CANCELS FINE AGAINST BOSTON POLICE JAMMER DUE TO AGE

The FCC has cancelled a proposed fine levied against a Jamaica Plain, Massachusetts, resident only identified as a John Doe based on his inability to pay a proposed $10,000 fine. Instead, it has admonished him for his willful and repeated violation of Section 301 of the Communications Act. This, after he was caught operating radio transmission equipment in on land mobile channels reserved exclusively for use by public safety entities. Amateur Radio Newsline's Don Carlson, KQ6FM, has more:

--

Back on October 22nd, 2007, the Boston Police Department reported to the FCC's Enforcement Bureau that it was receiving interference to its radio communications system. Because the interference was intermittent, the Telecommunications Director advised the Boston Office that he would provide additional information so that agents would know the best time of day to try to locate the interfering signal with FCC direction finding equipment.

Three days later on October 25th the Telecommunications Director contacted the Boston Office and reported that on October 24th police officers had arrested a young person only identified as a John Doe. At that time they had also confiscated a Yaesu transceiver and a Motorola two-way handheld. The person arrested admitted to having purchased the radios in April 2007 and provided the vendors with Boston Police radio codes so that the radios could be programmed with those channels. He also admitted to

operating on police radio channels.

On November 27, 2007, the Boston Field Office issued a Notice of Apparent Liability for Forfeiture to John Doe in the amount of $10,000 for operating radio transmitting equipment on land mobile channels reserved exclusively for use by public safety entities. In his response to the proposed fine, the John Doe did not dispute the findings. Instead, he requested cancellation of the forfeiture based on his inability to pay.

Now, after examining the financial documentation submitted by John Doe, the FCC concluded that cancellation of the forfeiture is warranted, based solely on his lack of income. However, because of the seriousness of the violation, the FCC did formally admonish John Doe for his willful and repeated violation of Section 301 of the Communications Act.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

--

The John Doe in this story had been arrested on charges unrelated to his operation on police radio channels. Because of his age his name and other information on the case was not made public by authorities. But one question remains. That being why the unidentified radio vendors were not at least a bit suspicious when a young person walked in to buy a radio programmed to transmit on the Boston Police frequencies. Regardless of the story the customer gave it cannot be a usual kind of a sale. (FCC)

**

RADIO LAW: FCC INVESTIGATING DIGITAL CABLE TRANSITION

The Federal Communications Commission has opened an investigation into the pricing policies of major cable operators and that of Verizon Communications. The agency wants to ensure the companies' customers are getting treated fairly,

On October 30th the FCC wrote to numerous cable operators including Comcast and Time Warner Cable. The agency's letter questioned the companies' practice of moving analog channels into digital tiers to free up bandwidth for other uses, such as high-definition channels. Analog customers will have to get a digital set-top box from the operator or buy the digital TV tier to watch those channels. The agency also will look into whether cable operators and Verizon are confusing customers by linking the shift of the analog channel to the digital tier to the nation's transition to digital broadcasts. The FCC says that the two moves are unrelated.

Most cable customers are analog customers, and those who do not wish to upgrade to digital cannot watch the channels that are moved to the digital tier The FCC gave the companies being probed to submit information about their pricing practices within two weeks. Verizon, which offers pay-TV services with FiOS, was also included in the probe. (FCC, published reports)

**

RADIO LAW: FCC APPROVES BROABAND ACCESSS TO WHITE SPACES

The FCC has approved a plan to open up unused, unlicensed portions of the television airwaves known as "white spaces" to deliver wireless broadband service. The vote on Tuesday, November 4th is being viewed as a major victory for public interest groups and big technology companies. They say white spaces have the potential to bring broadband to rural America and other under served parts of the country.

But not everyone is happy with the FCC decision. The move to open up these spectral parcels was opposed by the nation's television broadcasters. They say that their use to deliver wireless Internet access could disrupt their over-the-air transmissions. Also opposed are the manufacturers and users of wireless microphones. They too have raised concerns of mutual interference issues.

For those unaware, a white space in telecommunications refers to unused frequencies that in this case lie between television stations. They are assigned to that status to avoid adjacent channel interference. (FCC)
**

COMMUNICATIONS SAFETY: ANOTHER LAPTOP BATTERY RECALL

Sony has announced that it will recall roughly 100,000 notebook batteries worldwide. This following several reports that the batteries could overheat.

The recall covers notebooks made by Dell, Hewlett-Packard, and Toshiba, during the same timeframe as the widespread Sony laptop battery recall of 2006. However, the laptops named by the Consumer Products Safety Commission with whom Sony is cooperating not overlap with the models previously recalled.

There is some good news this time around. The hazard cited by the agency does not include the risk of a short-circuit or fire as in the last recall. Sony's previous recall cost the company at least $429 million, and covered over 10 million batteries.

Go to your machines manufacturers website to find out if your battery is among those being recalled. (CPSC)

HAM HAPPENINGS: 6 METER BROADCAST HAMS TO CELEBRATE ANALOG 2 GOING AWAY

The removal of all analog television from channel 2 will be celebrated with an on the air 6 meter operating event. According to Chris Boone, WB5ITT, who is coordinating the happening, the noise floor on 6 meters is expected to drop markedly when all the 100 kilowatt analog channel 2 transmitters go away. This means that here to for unreadable signals may just come out of the noise like never before.

WB5ITT says that he currently has representatives from three analog channel 2 stations on board the event and is looking for others to join in the party. Engineers and other hams at analog channel 2 television stations who will not be staying on channel 2 after the February 17th' digital transition should contact Chris at wb5itt at wb5itt dot net. A remailer on Yahoogroups has also been established. Join it using the normal sign-up commands to TV2on6meters@yahoogroups.com The date of the operating event will be (WB5ITT)

D-STAR NEWS: D-STAR COMES TO THE AZORES

D-Star has come to one of the remotest points on the globe. This, with word that the first D-Star repeater in the Azores Islands is on the air.

Operating as CQ0DAH dash B, this D-Star repeater is located on Santa Bï¿½rbara Mountain on Terceira Island. It operates on UHF Channel R U 576, with a transmit frequency of 438.450 MHz and receive frequency of 430.850 MHz, transmitting 25 watts out.

The adoption of D-Star in a remote outpost like the Azores is very significant since ham gear is not easy to come by in that part of the world. What it also seems to mean is that the D-Star digital system is quickly becoming the world standard that will eventually replace analog F-M for ham radio ham radio utility repeater communications. This, even though its only supported by Icom with most other manufacturers having turned their backs to it or trying to push alternatives systems that the worlds ham radio community is showing little interest in adopting. (Southgate)

**

D-STAR NEWS: W6HRO FROM HRO IN ANAHEIM CA

Ham Radio Outlet in Anaheim, California, has a low power D-Star repeater set up in the store. W6HRO operates on both 70 centimeters and 23 centimeter. It was originally established to help demonstrate the D-Star equipment but according to tore manager Janet Margelli, KL7MF, it was found to have pretty fair coverage around parts of Orange County.

The actual operating frequencies are W6HRO A on 1282.550 with a -12 MHz input offset and W6HRO B on 447.800 out with a -5 MHz input offset. Both receive and transmit in the normal D-Star format and are connected to the national gateway. Both bands also retransmit these Newsline reports once every week. As far as we know, W6HRO is the first D-Star repeater to serve as a Newsline outlet. (KL7MF)

**

RADIO EDUCATION: TECHNICIAN CLASS TRAINING ON LINE

The Arlington Radio Public Service Club has placed Technician Class Amateur Radio License Course material on their web site. The study materials are available, with some limitations, to other organizations without charge provided that prior permission is obtained and appropriate copyright notice and acknowledgement are included. For more information on obtaining and using this material please e-mail techclass (at) w4ava (dot) org. (KC5FM)

WORLDBEAT - BELGIUM: CELEBRATING THE FIRST TV SHOW

Turning to news from around the world, the first television show in Belgium was broadcast 55 years ago in 1953. And this is the reason for the special event station signing ON55INR. It will be active on SSB, CW and the digital modes through December 31st. QSL only via the bureau. (Southgate)

**

WORLDBEAT - FRANCE: CELEBRATING THE BOAT RACE

Members of France's Radio Club Vendeen will be active as TM6VG in all modes on all bands through November 15th. This, to celebrate Vendee Globe which is a round-the-world single-handed yacht race, sailed non-stop and without assistance that started on November 9th. More information is on-line at www.vendeeglobe.org (TDXB)

**

WORLDBEAT - OMAN: A SPECIAL GUEST OPERATION

Members of Germany's Lufthansa Amateur Radio Club and the Deutsche Amateur Radio Club I09 are currently the guests of the Royal Omani Amateur Radio Society and will be on the air From Oman through November 11. They are reportedly using the call letters A43DLH on CW, SSB and various digital modes on all bands. And during the final days of the event some EME operation is planned as well by DL8YHR. QSL via DK7PE. (OPDX)

**

DX ASSISTANCE: KN4LF RESUMES PROPAGATION FORCASTS

Tom Giella, KN4LF, in Lakeland, Florida reports that as of Friday October 31st that he resumed publishing his radiowave propagation forecast once again. You can find it in cyberspace at www.kn4lf.com/kn4lf6.htm (KN4LF via Southgate)

**

DX

In DX, word that ZS6AVM, will be on the air from Swaziland during November. Kisten out for him signing 3DA0VM on 40 through 10 meters using a Flex-5000A Software Defined Radio. QSL cards are requested to only be

sent direct via his home call.

And members of Oceania Amateur Radio DX Group Inc. will spend 10 days on Lord Howe Island for the 2009 CQ WPX Contest. VK4FW has announced that the operation will take place between March 24th and April 3rd 2009. He says that the group has successfully obtained accommodations and booked flights for the trip. To date they have 9 confirmed operators for a total of 13 actual people going. They still have room for a couple more, but you must be super-quick as both the accommodations on the island is almost full and so is the plane. If interested, contact vk4fw@westnet.com.au

F6ICX will be active as 5R8IC from Ile Sainte Marie Madagascar between November 18th and December 14th. Activity will be CW on 30 through 10 meters. QSL direct to F6ICX.

W6DXO, will be active as portable C6A from South Andros Island between March 1st and 7th of 2009. His operation will be holiday style with focus on 30, 17 and 12 meter bands as propagation allows. A QSL Manager will be announced at a later date

Lastly, N6NO, will be operating as CE0Y from Easter Island through November 16th. His activity will be mainly CW on use 40 through 12 meters. Although amateur radio is not normally permitted on 30 meters in the band for this operation. QSL via his home call.

(Above from various DX news sources.)

**

THAT FINAL ITEM: NEWSLINE FOLLOW-UP: SAVE DELANO MOVEMENT SPARKS YOUTUBE VIDEO

A follow-up to last weeks story on the support being given by inventor Mike Dorrough, KO6NM, to the effort to save the Voice of America transmitter facility in Delano, California, from being dismantled. Now, the Southgate News reports that a new video presentation on YouTube dot com highlights the story of the decommissioning of the Delano facility along with the history of the Voice of America Service.

Produced and hosted by Al Parker, the video's description says that the last remaining intact Voice of America shortwave broadcast facility in Delano, California is facing destruction unless we act now to save a vital part of our cultural heritage. It goes on to note that the Voice of America radio service was not only important to deployed troops and Americans working overseas, it also provided oppressed people around the world a window onto a free society.

The shows title is simply "Save the Delano VOA." You can see it on-line at http://uk.youtube.com/watch?v=qlLhWlDbKbI&fmt (Listener reports)

==> THE ARRL ON-LINE AUCTION: GOING ONCE, GOING TWICE, GONE!

Not with a whimper, but with a definite bang of the gavel, the Third Annual ARRL On-Line Auction closed on Friday, October 31 after nine days of frenzied bidding for almost 200 items <http://www.arrl.org/auction>. ARRL Business Services Manager Deb Jahnke, K1DAJ, said that she was thrilled with the responses the Auction received during its run. The generosity of many donors, Jahnke says, made it possible for the auction to offer a diverse list of items that included transceivers, ARRL Lab-tested and reviewed equipment, exotic vacations, vintage gear and mystery "junque" boxes.

This year's auction had more products than the 2006 or the 2007 auction. "Almost 1300 bids were placed this year on 197 items, auctioning off more than $43,000 worth of merchandise," Jahnke said. In 2007, more than 1100 bids were received for 181 items; in 2006, 1300 bids were placed for just over 100 items.

"For the third time in a row, the ARRL On-Line Auction did not disappoint," said Jahnke. "Not only did we have an increase in the number of items to bid on, we were so pleased to see a dramatic increase in Business Partner donations to the Auction this year."

While R4 Systems <http://www.r4systems.com/> -- developers of the Proteus Design Suite, a suite of tools for professional printed circuit board design -- was a new face to the ARRL Auction family, many old friends, such as ICOM <http://www.icomamerica.com/> returned. R4 donated a Proteus Suite software package that sold for $728; ICOM donated an IC-7000 HF/VHF/UHF All Mode Transceiver that eventually attracted 11 bids and sold for $1325.

One of the more popular items in this year's auction included four "junque boxes," donated by the ARRL Lab. Garnering 77 bids between them, these Amateur Radio treasure troves went for more than $250 each, raising more than $1000. "We featured the 'junque boxes' in our first auction, and they proved to be so popular with our bidders," Jahnke said. "We brought them back last year, and once again, we couldn't believe how they were all the rage. I can't even begin to describe how well-received they were this year." The contents of each box are a mystery, Jahnke said, known only to the ARRL Lab staff. "And they won't tell!" she said.

A lucky bidder won the chance for a little DX with the vacation spot on St Croix, donated by Vicky Thorland Oster and George Oster, NP2N (air and ground transportation not included). This villa -- located about 100 meters above sea level with wonderful antenna views to EU, USA and Asia -- has three operating stations equipped with multiple transceivers, amplifiers, antennas and on-site electrical generation capability.

If you are interested in Emergency Communications, then the ARRL On-Line Auction had a great deal for you: Emergency Starter Go Kits. These kits include an abundance of everything today's amateur needs when heading out to assist served agencies. Each kit contains an ICOM IC-V82 Sport handheld transceiver, package of six AA batteries, a black tote bag to hold all your gear, a reflective vest, an "ARRL Repeater Directory" and an "ARES Field Resources Manual." Opening bids for each of the 13 kits was $105, and together they raised $2214.

Proceeds from the auction benefit ARRL education programs, including activities to license new hams, strengthen Amateur Radio's emergency service training, offer continuing technical and operating education, as well as create instructional materials.

==> ARRL VEC ANNOUNCES EXAM FEE INCREASE

On November 6, The ARRL VEC <http://www.arrl.org/arrlvec/> announced that as of January 1, 2009, the fee to take an ARRL Volunteer Examiner (VE)-administered Amateur Radio license exam will increase by $1, from $14 to $15. According to ARRL VEC Manager Maria Somma, AB1FM, ARRL VE teams may retain up to $7 of this fee to directly reimburse their teams' out-of-pocket examination expenses; currently, VE teams keep $6. This is the first time in four years that the examination fee has been adjusted.

Somma said that the FCC allows VECs to collect an examination reimbursement fee from each candidate who takes one or more exam elements. "VEs and VECs may be reimbursed by examinees for out-of-pocket expenses incurred in preparing, processing, administering or coordinating an examination for an amateur operator license (FCC Rule 97.527)," she said <http://edocket.access.gpo.gov/cfr_2002/octqtr/pdf/47cfr97.527.pdf>. "These exam fees help the VEC recover its costs of providing its services."

Saying that every examinee at each ARRL coordinated examination session is charged the same fee in accordance with the annually-established fee schedule, "Any person sitting for an exam, or having a new license or upgrade processed at a test sessions, must pay the exam fee applicable for the calendar year," Somma explained. "The ARRL VEC's exam fee for calendar year 2009 is $15. Each time a candidate pays one exam fee, they are entitled to take tests for Elements 2, 3 and 4 as needed, up to all three elements under the single exam fee. Each time an examinee retakes an exam element (assuming the VE Team has different exam design available), another exam fee is charged."

VE teams may elect to keep a prescribed portion of each exam fee collected exclusively to offset expenses that are directly incurred in administering the VE program. "All out-of-pocket reimbursable expenses shall be necessary and prudent, and must relate to the examination process in some way," Somma said. "VECs and VEs are expected to use good business judgment with respect to reimbursement amounts. The examination reimbursement fee cannot be used to offset non-session related costs and must be kept separate from other accounts."

Somma pointed out that business expenses such as postal, utility, fuel and printing charges, are increasing: "Our VE teams are feeling the effects of the current economy, too! Teams are retaining reimbursement at amounts considerably larger than previous years. The amount of out-of-pocket costs that our VEs and the VEC are expending to provide authorized services in connection with Amateur Radio operator examinations continues to rise."

Recent ARRL VEC cost-cutting steps have included staff reduction, reduced printing charges of ARRL VE training material and exam software, renegotiating shipping and printing contracts and eliminating lesser-used services.

"Only so many cost-cutting measures can be justified without cutting back significantly on services essential to our VE teams, our customers

and our program," Somma said. "As a result, an adjustment was needed in the 2009 exam reimbursement fee if we intended to maintain the basic levels of service that our VEs, VE teams and candidates have come to expect."

Somma said that the ARRL VEC permits its VEs to retain a portion of the exam fees they collect to directly reimburse themselves for out-of-pocket expenses incurred in setting up and conducting their examination sessions. "As long as the expense is warranted and has been prudently incurred -- and the expense is specifically related to exam administration -- then the fee can be retained," she said. "The team should keep a complete record of the expenses paid (with receipts) in team records for two years. Records must be made available to the ARRL VEC upon request. Costs not related to the exam session processes or paperwork are not reimbursable."

"We believe that the ARRL VEC's level of assistance and services are outstanding," said ARRL Chief Operating Officer Harold Kramer, WJ1B. "Exam supplies, such as paperwork and software, shipping costs both to and from the VEC and ARRL VE accreditation, as well as credentials, are all free of charge for our VEs. We maintain a toll-free number for our VEs and we even offer reimbursement to the VE team for their expenses. We appreciate the dedication and volunteerism of all our VEs in the field. This is why we offer so many services free of charge. This is why we have that same level of duty and commitment here. Every test fee we collect goes right back into the VEC program and to serving the Amateur Radio community."

==> RICHARD GARRIOTT, W5KWQ, BACK ON TERRA FIRMA

After 10 days on the International Space Station (ISS), Richard Garriott, W5KWQ, returned to Earth October 23 on Soyuz TMA-12. Garriott is the son of Owen Garriott, W5LFL, who in 1983 was the first ham to make QSOs from space. While Richard was on board the ISS, he too made QSOs, furthering what has now become a family tradition. "This mission to the ISS fulfilled a lifelong dream to experience spaceflight, just as my father first did 25 years ago [on STS-9]," Richard said. "It's an honor to be the first American to follow a parent into space." Richard took off from Star City in Kazakhstan on October 12.

While on board the ISS, Richard conducted scientific experiments and environmental research -- he also had a chance to do quite a bit of Amateur Radio, including sending slow-scan TV (SSTV) images <http://www.arrl.org/tis/info/sstv.html>. Calling the chance to make QSOs from space a "great opportunity," he described speaking directly with hams and trading call signs to be an "unexpected joy" and said in his blog that he was pleased "to find so many enthusiastic hams who were so well informed and interested in my activities in orbit. When I began my transmissions with preplanned SSTV images, including 'pirate messages,' test patterns and family images, I did not know how they would be received. But it seemed that fellow hams really enjoyed seeing this beginning to my time on the International Space Station."

Through the Amateur Radio on the International Space Station program (ARISS) <http://www.rac.ca/ariss/oindex.htm>, Richard made numerous contacts via Amateur Radio with schoolchildren. He said he found speaking to students "most rewarding...Growing up in an astronaut family, I firmly believed that every person could go to space, and now I have. I took this opportunity to inspire [the students] with my adventure and let them know they can achieve their wildest dreams as well with hard work and perseverance." To date, there have been 379 ARISS ISS-to-Earth QSOs.

Richard Glueck, N1MDZ, a teacher at Orono Middle School in Orono, Maine, said students in his classes were excited about making contact via Amateur Radio with Richard on the ISS. "Richard recorded our contact and wished us well," Glueck told the ARRL. "We returned the greeting. It made the afternoon for my Social Studies class. We made the contact using straight FM voice. Our contact was heavy on the static, and we were hearing Garriott respond to various hams in Iowa and Michigan, as well. We heard the data transmission of the SSTV during the early morning passes."

Saying he "clearly remembers" Sputnik in 1957, Glueck said the "growth of space technology and human inhabitation impacts my life in a huge way. I firmly believe that while modern kids take space flight and satellites for granted, that this is a good thing, Amateur Radio is the most significant manner in which teachers can get kids to interact with spaceflight in a personal manner."

The Liberal Arts and Science Academy at LBJ High School in his hometown of Austin, Texas was one of the many schools that Richard made contact with. "It takes a lot to excite kids these days with the Internet and cell phones, but when you tell kids you're going to talk directly to the space station from our high school, with our own equipment, they're very excited," teacher Ronny Risinger, KC5EES, told an Austin television station. Student Jason Pan agreed: "Just come here and talk to an astronaut...it's just unbelievable. Like you can't even really think about it. It's just like something you can experience. I don't know, I don't really have any words for it."

ARISS International Chairman Frank Bauer, KA3HDO, had nothing but praise for Richard and his trip to the ISS. "We have all made history, starting with Richard, W5KWQ, and his father Owen, W5LFL, and continuing with all [who have] participated and/or volunteered in his ISS journey," Bauer told the amateur community. "Along the way, we have sparked the imaginations of thousands of students, and I understand [that Richard's journey has] excited some youths to the point where they are now licensed."

Calling Richard "prolific on the ARISS ham radio system," Bauer said Richard made "hundreds of voice contacts, operating the packet system during the crew sleep times and transmitting hundreds of SSTV images throughout the day. He put the newest ARISS hardware, the Kenwood VC-H1, to good use, performing the vast majority of contacts with this hardware system coupled with the Kenwood D700 transceiver. The remaining SSTV

downlinks were performed with the software-based SSTV system."

Bauer said that given the limited availability of ISS computer systems, "the ARISS team will continue to utilize the VC-H1 well after Richard's flight. So don't be surprised if you see some VC-H1 SSTV operations from Mike Fincke, KE5AIT, during his stay as the commander of Expedition 18." Fincke is expected to return to Earth in late March 2009. Gregory Chamitoff, KD5PKZ, and Yury Lonchakov RA3DT, are currently on board the ISS, as well.

Richard said that after his first QSOs with Earth, he understood how "well-networked" the global ham community really is: "I received specific reports back through Mission Control-Moscow about the technical aspects of my work and how the [amateur] community was enjoying the transmissions. This redoubled my enthusiasm to do quality work for the Amateur Radio legions around the world, as I realized how much it meant to those with whom I had the chance to talk. By late in my flight, I had contacted many hundreds of hams by voice and I have good records of these contacts."

While in space, Richard performed a series of experiments for NASA that examined the physical impact of spaceflight on astronauts. He observed the reaction of the eyes to low and high pressure in a microgravity environment, the effects of spaceflight on the human immune system, and astronauts' sleep/wake patterns and sleep characteristics. He also photographed a number of ecologically significant places on Earth on behalf of The Nature Conservancy. The photographs will be compared to shots taken 25 years ago by Owen Garriott while he was in space and will be used to document how the Earth has changed in one generation. He also worked in cooperation with the European Space Agency to perform a series of experiments that observed early detection of osteoporosis, vestibular (inner ear) adaptation to G-force transitions and the occurrence of lower back pain.

On his last day in space, Richard sent SSTV "goodbye" images down to Earth. "I also contacted many hams that had listened to or contacted my father from space 25 years ago," he said. "Some hams I contacted 2 to 4 times on my flight. On those last days, I was very moved, when [I was sent] sent many 'soft landing' messages from individuals and classrooms full of children as I passed by. The ham community has added greatly to my personal feelings of success on my flight. I can only hope that you enjoyed it as much as I did."

==> ARRL ETP SCHOOL GETS "UP CLOSE AND PERSONAL" WITH SPACE

When Richard Garriott, W5KWQ, went onboard the International Space Station (ISS), one of his main goals was to make contacts with schoolchildren through the Amateur Radio on the International Space Station (ARISS) program. According to ARRL ARISS Program Manager Rosalie White, K1STO, Garriott requested that ARISS assist him in taking part in a whole slate of varied ham radio activities. "The ARISS Team tagged up on the air with Richard early on to check the radios and the schedule,"

she said. "Not only did he do a multitude of scheduled ARISS contacts, he got on the air for random QSOs with hams around the world."

One of those scheduled contacts was to be on Sunday, October 19 with the LBJ High School Amateur Radio Club, K5LBJ, at the Liberal Arts and Science Academy at LBJ High School in Garriott's hometown of Austin, Texas. The school is an ARRL Education and Technology Program (ETP) school <http://www.arrl.org/FandES/tbp/>, formerly known as a "Big Project" school; the Amateur Radio club is guided by Ronny Risinger, KC5EES, a graduate of the ARRL's Teachers Institute on Wireless Technology <http://www.arrl.org/FandES/tbp/ti.html>.

According to Risinger, K5LBJ had worked closely with several hams who had already completed at least one or more direct ISS contacts, preparing for the contact with Garriott. "Our group was confident in its preparation," Risinger told the ARRL, "but those doubts always linger: Did a rotator cable gain a gremlin as it was moved the morning of the contact? Will the rotator decide to fail? Most importantly, will our computer and software function correctly to track the ISS? But all of the stress and worry about such issues melted away as soon as we called 'NA1SS, this is K5LBJ' and heard the faint, but unmistakable reply, 'K5LBJ, this is NA1SS.' From that moment on, I knew that the crowd that had assembled in our school cafeteria in the early hours of a Sunday morning would leave happy."

Risinger said that as soon as contact was established, "Richard began to answer the questions posed by the students from K5LBJ and the Deep Wood Elementary Amateur Radio Club, K5DWE." Calling the participating students "very professional," Risinger said that each student stood in line and eagerly awaited their turn at the mic.

"Never demonstrating any sign of nerves, each of the students -- ranging in age from 8 to 18 -- carefully obtained the mic from the previous student and relayed their question to the ISS," he said. "As the club sponsor and liaison with the schools, I was extremely proud of the students' confidence and poise as they spoke with Richard. They knew that this was a 'failure is not an option' moment and they took their role seriously. No one got 'mic fright' or ad-libbed a 'shout out to the world.' This group of young people demonstrated the best of Amateur Radio: Working together as professionals to achieve great things. In this case, they created memories that will last a lifetime."

Like a row of ducks, the students approached the mic in succession. As each asked their question, Richard gave a thorough but succinct answer. "Thanks to the work of Bryan Bible, N5BTB, the audio from the uplink/downlink was combined and fed into the school speaker system," Risinger said. "The audio from the contact was crisp and loud as it filled the entire cafeteria. While the contact was going on, satellite contact mentor Ron Parsons, W5RKN, treated the audience to the view from the ISS." Using software and Google Earth, Risinger said that Parsons projected the view of Earth from the ISS onto the wall. As the ISS approached Texas, flags denoting major cities were displayed on the

projected view.

"If one watched closely, they would have seen a small flag marked 'Liberal Arts & Science Academy,' showing our location as seen from the ISS," Risinger told the ARRL. "You can't but help to notice from the projection just how fast the ISS is traveling. In just a matter of minutes, the ISS 'view' showed several states crossing below."

The contact between the Austin school clubs and Richard had a 10 minute window (ISS traveling horizon to horizon). Risinger said that after that first faint response from Richard, the audio was loud and clear: "For the next eight minutes, 11 students fired away a total of 20 questions ranging from space sickness to how Richard's own experience as a space traveler would affect his business model to promote private space travel."

As the conversation took place, Risinger noted the time until LOS (loss of signal) and realized that they were going to finish earlier than planned. "While I had warned the audience that we may abruptly lose contact with Richard if we went too long, I had not anticipated having time to spare," he told the ARRL. "As the last student listened to Richard's response, I took the microphone. In that moment, I thought of all the things I could say. Something banal? Something witty? Instead, when I heard silence, I could only tell Richard thank you for taking his short time in space to contact our school. By my students' rough calculations, Richard spent $20,000 of his time -- not to look out the window at the glory of the Earth below, or to work on science experiments -- but to speak with children. This rare act of kindness and inspiration had to be noted. In response, Richard thanked our group and remarked that through education and perseverance, students in our room might also have the opportunity one day to travel to space. The wonder of space travel and its links to Amateur Radio became real as we heard him sign off, 'K5LBJ, this is NA1SS -- 73 from the International Space Station.' As K5LBJ signed off as well, the room erupted in cheers. A moment that had begun with butterflies ended in high-fives and a new generation of students was inspired by the possibility of space travel."

According to Risinger, as the contact ended, the students beamed with pride as they discussed the contact. Comments such as "I was really nervous" and "It was cool!" echoed all around the cafeteria. "All conveyed a deep satisfaction in achieving something unique, something that only Amateur Radio could offer," he said.

After the crowd dispersed, the crew of adults that made the contact possible began to tear down the equipment. "When I looked around the room," Risinger said, "I could not help but notice that the entire chain of command was standing before me. The people that worked together to make this opportunity happen for the students were right here: Kenneth Ransom, N5VHO, from Johnson Space Center; ARISS Liaison Gene Chapline, K5YFL; Austin ARC Contact Coordinator Lee Cooper, W5LHC; Austin area satellite mentor Ron Parsons, W5RKN; classroom mentor Joe Fisher, K5EJL, and me, the classroom teacher. I reflected on the time and effort that

went into this contact. While the students only saw '10 minutes of awesome!' I knew that it was due to the efforts of the people on this team. Along with Richard Garriott, they had sacrificed of themselves to benefit others -- they are Amateur Radio at its finest."

==> FRED FISH MEMORIAL AWARD #1 PRESENTED TO LEE FISH, K5FF

The first Fred Fish Memorial Award (FFMA) plaque has been awarded posthumously to Fred Fish, W5FF (SK) <http://www.arrl.org/awards/ffma/index.html>. The award was presented by West Gulf Division Director Coy Day, N5OK, to Fish's widow Lee Fish, K5FF, at the ARRL Forum at the Texoma Hamorama in Ardmore, Oklahoma on October 25.

The FFMA was created to honor Fred Fish, W5FF, a legendary VHF+ operator who became the first amateur to work and confirm all 488 Maidenhead grid squares on 6 meters in the 48 contiguous United States. According to ARRL Contest Branch Manager Sean Kutzko, KX9X, plaques bearing Fred Fish's likeness will be awarded to any amateur who can repeat Fred's accomplishment.

Several members of the Central States VHF Society (CSVHFS) were present for the ceremony; Fred and Lee were members of CSVHFS for many years. "Lee was visibly moved when she saw the photo of her late husband on the plaque bearing his name," Kutzko said, "and her voice broke as she spoke out loud, realizing that 'when award number 2099 is presented, Fred's picture will still be on the plaque.' Lee also thanked the ARRL and the Amateur Radio community for recognizing her husband's contributions to Amateur Radio."

Both Lee and Fred were very active on the VHF bands, and earned Worked All States (WAS) <http://www.arrl.org/awards/was/> on 6 and 2 meters, as well as 222 and 432 MHz. Lee was the first person to get DXCC on 6 meters; Fred was the second. Kutzko said that the couple is remembered as generous with their time to VHF newcomers.

More information on the Fred Fish Memorial Award, as well as other ARRL operating awards, can be found on the ARRL Awards Program portion of the ARRL Web site <http://www.arrl.org/awards/>.

==> ARRL NTS SECOND REGION NET EXPANDS TO INCLUDE EASTERN CANADA

As of November 1, 2008, the Second Region Net (2RN) of the ARRL National Traffic System (NTS) expanded its reach, providing regular network nodes for Canadian provinces in Eastern Canada <http://www.arrl.org/FandES/field/nts-mpg/>.

In a joint announcement last week, NTS Eastern Area Chair Marcia Forde, KW1U, and Bill Thompson, W2MTA, NTS Second Region Net (2RN) Manager for Cycles 2 and 3, invited those Canadian radio amateurs who handle traffic to participate in Second Region Net operations as the Eastern Canada Net (ECN) is no longer active. According to Radio Amateurs of Canada (RAC) <http://www.rac.ca/>, the ECN, a CW Net, handled traffic for Ontario,

Quebec, New Brunswick, Nova Scotia, Price Edward Island and Newfoundland into the US for transcontinental transmission.

"This expansion of 2RN operations is intended to allow Section Nets in the eastern provinces of Canada to have outlet to Eastern Area Net operations and to allow inbound traffic to flow to those provinces of Ontario, Quebec and the Maritimes," Thompson said. "This is much the same way as the more-western provinces in Canada currently interface with the NTS RN7 (Seventh Region Net) and TEN (Tenth Region Net) nets."

Canadian operators are invited to participate in the 2RN operations in addition to those of their provincial NTS Section Nets. The Second Region Net operates four times daily on the 75 and 80 meter bands (3.925 and 3.576 MHz) in accordance with the NTS Four Cycle timetable using Cycles 2, 3 and 4.

==>SOLAR UPDATE

Tad "The sway of magic potent over Sun and star" Cook, K7RA, this week reports: Sunspot 1007 is still there, but probably rotating off the visible solar disk sometime today. This is the eighth sunspot of the new solar cycle -- and also the largest. Sunspot numbers for October 30-November 5 were 13, 16, 16, 17, 18, 14 and 11 with a mean of 15. The 10.7 cm flux was 66.8, 68.1, 66.7, 69.1, 69.5, 68 and 67.7 with a mean of 68. The estimated planetary A indices were 11, 6, 1, 2, 1, 1 and 0 with a mean of 3.1. The estimated mid-latitude A indices were 11, 5, 0, 2, 1, 1 and 0 with a mean of 2.9. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by William Wordsworth's "Laodamia" <http://www.bartleby.com/41/393.html>.

==>IN BRIEF:

* This Weekend on the Radio: This week, look for the NCCC Sprint on November 7. The WAE DX Contest (RTTY), the JIDX Phone Contest, the OK/OM DX Contest (CW), the Kentucky QSO Party and the CQ-WE Contest are all November 8-9. The SKCC Weekend Sprintathon is November 9 and the RSGB 80 Meter Club Sprint (SSB) is November 13. Next week is the ARRL EME Contest on November 15-16 and the ARRL Sweepstakes Contest (SSB) on November 15-17. The NCCC Sprint is November 14.The JT Hamradio-50 Anniversary DX Contest and the Feld Hell Sprint are November 15. The SARL Field Day Contest, the All Austrian 160 Meter Contest and the RSGB 2nd 1.8 MHz Contest (CW) are November 15-16. The EU PSK63 QSO Party is November 16, the Run for the Bacon QRP Contest is November 17 and the NAQCC Straight Key/Bug Sprint is November 20. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update

<http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, November 23, 2008, for these online course sessions beginning on Friday, December 5, 2008: Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Technician License Course (EC-010), Analog Electronics (EC-012) and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cep@arrl.org>.

* W1AW to Participate in Global Simulated Emergency Test: On November 8, W1AW, the Hiram Percy Maxim Memorial Station, will be participating in the 2008 Global Simulated Emergency Test (GlobalSET), sponsored by IARU Region 1 <http://raynet-hf.net/tiki-read_article.php?articleId=34>. The event runs from 0400-0800 UTC, but due to the W1AW transmission schedule, the ARRL station will be on the air from 0500-0800 UTC. ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, and ARRL Regulatory Information Manager Dan Henderson, N1ND, will be on the air from W1AW. According to event organizer Greg Mossop, G0DUB, the GlobalSET is an exercise <http://www.iaru-r1.org/GlobalSETNov08Rules-English.pdf> for headquarters stations of IARU Member Societies and stations of emergency communications groups -- it is not a contest. Activity will be concentrated around the IARU Emergency Centre of Activity frequencies. Where permitted by their licensing administration, participating stations will use "/D" after their call sign, indicating distress or disaster. A list of participating stations can be found onine <http://www.raynet-hf.net/tiki-read_article.php?articleId=35>.

* George Steber, WB9LVI, Wins October QST Cover Plaque Award: The winner of the QST Cover Plaque Award for October is George R. Steber, WB9LVI, for his article "Experimenter's RF Spectrum Analyzer." Congratulations, George! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page

<http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the November issue by Sunday, November 30.

* Riley Hollingsworth, K4ZDH, Appointed Assistant Director: On October 25, ARRL Atlantic Division Director Bill Edgar, N3LLR, announced that he had appointed Riley Hollingsworth, K4ZDH, former Special Counsel for the Spectrum Enforcement Division of the FCC's Enforcement Bureau, an Assistant Director for the Atlantic Division; Hollingsworth retired from the FCC earlier this year. Assistant Directors are personal appointees of Directors who are chosen to aid in the normal routine of administering the Division; they usually have knowledge or expertise in a certain area concerning Amateur Radio. There are currently nine Assistant Directors in the Atlantic Division.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify

membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Amateur Radio Newsline(tm) Report 1631 - November 14, 2008

I'm Bill Pasternak, WA6ITF, for a moment stepping out of my role as Newsline's producer.

For many years, one of the leaders in the repeater coordination community was Karl Pagel, N6BVU. Sadly, I must report that Karl is these days confined to a nursing home in failing health.

Due to lung problems, he finds it hard to speak for any length of time. What Karl needs is a laptop computer with a wireless card so that he can get back to being active by communicating with his fingers rather than his voice. If you have a laptop that you are no longer using, please e-mail us here at Newsline and we will happily arrange for it to get to Karl. Just e-mail us at newsline@arnewsline.org.

One final thought. Karl Pagel literally devoted most of his adult life to serving the ham radio community. He's truly one of the good guys and his repeater directories for the south-western United States were the most accurate ever produced. And he did all of this as a volunteer. So if you have an older working wireless laptop that's sitting in the closet, we have
someone who can put it to good use.

And less we forget, get-well wishes to Karl Pagel, N6BVU, can be sent to him at our e-mail address. We will print them out and see that he gets them.

I'm Bill Pasternak, WA6ITF. Here's the newscast.

**

Amateur Radio Newsline report number 1631 with a release date of Friday, November 14th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The sinking economy hits ham radio and forces cancellation of a major ham radio show down-under, I-B-M says its going into the rural B-P-L business, a buyout in the ham radio publishing industry and the long awaited St. Brandon Island DXpedition will take place this month. Find out the details on Amateur Radio Newsline(tm) report number 1631 coming your way right now.

HAM HAPPENINGS: THE GLOBAL RECESSION HITS HAM RADIO

The world wide recession has hit ham radio. This with word that one of Australia's major ham radio gatherings has been cancelled for 2009 because of it. Bruce Lees, VK3FFF, reports:

--

One of Australia's largest ham radio events has been put on hold. Amateur Radio Victoria has decided to postpone the Center Victoria RadioFest, which was to be held in February at the Kyneton racecourse, due in part to the current economic uncertainty in Australia.

Its President Jim Linton VK3PC says postponing this major annual event until 2010 will be a disappointment to many, but it is the result of a number of factors outside the control of the state-wide organization. Among these are growing concerns within the general community about job security and lower returns from savings and investments including superannuation.

A downturn already exists in some retail sectors, and a sharp fall in the exchange rate value of the Aussie dollar will further increase the price of amateur radio equipment.

On a positive note, Jim Linton VK3PC advises that planning will now focus on the return of the Center Victoria RadioFest in 2010 as part of the Wireless Institute of Australia centenary celebrations.

I'm Bruce Lees VK3FFF.

--

To what extent the recession will affect other ham radio shows around the world is at this time unknown. (WIA News)

THE BPL FIGHT: IBM SAYS ITS BOPL WILL SERVE RURAL AMERICA

According to news reports, IBM says it wants to bring high speed Internet to rural areas of the nation using Broadband over Powerline technology. The company has penned a $9.6 million contract with International Broadband Electric Communications to deliver high-speed broadband connectivity to millions of people who both companies claim might otherwise not be able to get it.

The Wall Street Journal reported that IBM and International Broadband Electric Communications are working with over a dozen electric cooperatives in seven states. IBM will provide the data technology while International Broadband Electric Communications will actually manage the networks.

For years the supporters of BPL have hoped that it would allow power companies to become the third alternative in the broadband market, competing against cable operators and telephone companies. But technical limitations and interference issues with radio systems including those used by ham radio operators have stood in the way of mass adoption.

Weather or not this latest attempt to deploy BPL will meet with any measure of success is questionable. Even though IBM and International Broadband

Electric Communications focusing on rural and underserved markets, it seems like they still have an uphill battle in overcoming interference issues. Only a few months ago the deployment of BPL was handed what industry observers considered to be a proverbial death blow. This, after s federal appeals court sided in part with the ARRL and the amateur radio community in its challenge to FCC rules designed to speed the service's rollout. The judges in the case sent the rules back to the FCC with instructions to clarify is reasoning for its rules and to publicize its studies more fully.

Also, deploying any new infrastructure whether it's wired or wireless won't be cheap. Even with the powerlines already in place, some reports say that it could take years before rural Americans e get high-speed Internet. And other technologies, such as 4G wireless may offer lower cost and higher speeds with fewer technical issues than BPL. Also, an article in the latest I-triple-E Communications Magazine reports on a research effort by NATO that shows that BPL would cause interference to military communications systems.

The bottom line: What affect a successful rural rollout of BPL by IBM and International Broadband Electric Communications might have on ham radio communications will not be known until the first system is in trial operation.

(ARNewsline from the VHF Reflector, K0SQ, K2GW, KB6NUand various other published news reports. See http://kb6nu.com/more-evidence-that-bpl-causes-interference/ for the implications to military communications.)

**

RADIO POLITICS: CHANGES LIKELY AT THE FCC

Look for some changes at the FCC early next year. Don Carlson, KQ6FM, has the details:

--

Now that the election is over and the Democrats control both Congress and the White House, look for some major changes at the FCC. This, not only because there will be a new chairman and at least one new commissioner will be Democrats. But also in the way issues will be explored and acted upon by a soon to be Democratic controlled telecommunications agency.

While there will be little to impact on ham radio, at least for the present, broadcasters and telecommunications giants may have some cause for concern. For example, the commission's broadcast localism proposals, if adopted, might be more stringent under a Democratic controlled FCC. Those proposals could include requiring the main studio to be in the city of license and returning to the days of 24 hour a day, 7 day a week staffing. This is something that many radio networks have gotten away from by adopting central-casting from one location and satellite or fiber optic based delivery to the cities served.

Also the license term for broadcasters could wind up being shorter. Radio World on-line reports that Ernest Sanchez, a principal of The Sanchez Law Firm says that president-elect Barack Obama has told confidantes he believes eight years is too long a term for a broadcaster to hold a license. That may signal more public interest sensitivity from whomever new administration selects as the next FCC chairman.

All this said, its for the moment a lets wait and see what the new administration brings.

For the Amateur Radio Newsline. I'm Don Carlson, KQ6FM, in Reno.

--

Whatever the changes are, you can be pretty certain that the FCC's overall policies will likely be more liberal leaning in the years to come. (RW, others)

THE COST OF US HAM EXAMS: ARRL VS W5YI ON RAISING TESTING FEES

The cost of taking a ham radio exam through the nations largest Volunteer Examination Coordinator is going up, but the nations second biggest V-E-C says not so fast.

On November 6th, The ARRL VEC announced that as of January 1, 2009, the fee to take an ARRL Volunteer Examiner administered Amateur Radio license exam will increase by $1, from $14 to $15.
Meantime, the nations other big VEC says that it will not be raising its exam rate.

Larry Pollock , NB5X, is the President of the W5YI-VEC. He says that the his organization will hold the line on the $14 exam fee level charged applicants to take amateur examinations. That it will not will increase license examination fees for 2009.

It should be noted that each VEC across the country establishes it own fee schedule for providing examination services. As a result, there are almost as many different rates charged for examinations as there are VEC's. Depending on the VEC, the cost runs anywhere from the high of $15 to one that charges no fee at all to administer an exam. (ARRL Release, W5YI VEC Release)

**

RESCUE RADIO: HAM RADIO WAS READY FOR PALOMA

Ham radio was activated when a Hurricane Paloma threatened the Cayman Islands and Cuba over the weekend of November 8th and 9th. Various hurricane watch nets and the ham station at the National Hurricane Center in Miami were on alert. The nets forwarded severe incoming weather reports to the center's WX4NHC amateur radio station and also using VoIP circuits.

At its peak, Paloma became a category 4 storm with peak winds in excess of 130 miles per hour before downgrading to a tropical storm. The National

Weather Service says it will likely dissipate completely as it reaches the colder waters of the Atlantic on its trek North. (Various sources)

BREAKING DX NEWS: DELAYED ST. BRANDONS OPERATION TO TAKE PLACE THIS MONTH

Some good news for DX'ers. Rachid Cadersa, 3B8FQ, reports that his trip to activate St. Brandon Island is on once again.

His operation from the remote outpost had been planned for late October. It was delayed due to the unavailability of a sea going vessel for transportation. The next boat scheduled to leave for St. Brandon is November 15th. Rachid says that he and the meteorological station maintenance team are hoping to be aboard.

If everything works out as planned, Rachid will be active as 3B7FQ much longer than during his short stay on Agalega Island as 3B6FQ this past April. As was the case this past spring, he will be on a work assignment and will be active on CW and SSB as time is available.

We will have more DX related news later on in this weeks Amateur Radio Newsline report. (OPDX)

HAM RADIO BUSINESS: CQ ACQUIRES WORLDRADIO AND TAKES IT ON-LINE

A big change is coming to the ham radio publishing scene. This as one popular magazine absorbs another. Bill Pasternak, WA6ITF, is in the Newsroom with the details:

--

Two magazines that this writer knows quite well are kind of being joined at the hip. At least, so as to speak. This with word that Hicksville, New York-based CQ Communications, Inc. has acquired Sacramento, California based WorldRadio magazine.

Since its inception in July of 1971, WorldRadio has been the only ham radio magazine published West of the Continental Divide. Its a monthly publication with a primary focus on the human side of ham radio. And as many of you know, for about the past 10 years this reporter has been the editor of its VHF and F-M column.

So why has Worldradio been sold? My longtime friend and Worldradio publisher Armond Noble, N6WR, says that at the age of 74 its simply time for him to retire. And why sell to CQ? In a press release N6WR said simply that he wanted to be sure that WorldRadio found a good home, and that its readers would continue to be served by what he termed as an independent voice in amateur radio.

CQ Publisher Dick Ross, K2MGA, echoed Armond Noble's words. Ross says that for nearly four decades WorldRadio has filled an important niche in the hobby. Ross says that he welcomes all of WorldRadio's readers to the CQ family, and looks forward to meeting their needs for many years to come.

At this time WorldRadio to continue to be published, but only online magazine with Editor Nancy Kott, WZ8C, continuing in that position. Current WorldRadio subscribers will also have their subscriptions transferred to CQ magazine. Readers will be notified of details as plans are finalized.

CQ, a general-interest ham radio magazine best known for its support of DX'ing and contesting, has been in print since January, 1945. And along with Vertex-Standard Corporation, it is also one of the two primary corporate underwriters of the Amateur Radio Newsline Young Ham of the Year Award.

In the newsroom, I'm Bill Pasterak, WA6ITF.

--

We at Amateur Radio Newsline thank retiring Worldradio publisher Armond Noble, N6WR, and his wife Helen for their years of service to the world-wide ham radio community. (ARNewsline from joint CQ / WorldRadio News Release)

**

ENFORCEMENT: LOCAL POLICE AND FCC TEAM UP ON UNLICENSED FLORIDA STATION BUST

Turning to enforcement news, a Lakeland, Florida man is accused of illegally operating a radio station out of a motel. This, after Polk County Sheriff's Deputies arrested 53 year-old Frankie Grover for broadcasting without an FCC license. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

The investigation into Frankie Grover's unlicensed broadcasts began when a Lakeland Florida detective spotted a flyer advertising a party sponsored by "Blazin' 87.9 Da Biz." With assistance of the FCC the Lakeland detectives were able to locate where the radio 87.9 FM signal was broadcasting from. And, believe it or not, that turned out to be a motel on a main steet in that city.

The FCC quickly confirmed that no license existed for the radio station on that frequency or at that location. So, for the next two months, detectives

say they watched and listened to Frankie Grover and his Blazin' 87. They say Grover was also running live webcam and internet audio of 87.9 FM simultaneously with radio broadcasts, so it was not all that difficult to keep tabs on him.

On November 7th, detectives made their move. They arrested Grover after serving search warrants at the motel. Investigators say Grover paid $450 a month for each of the three rooms that they allege served as the studio and office for the station. At the time of the raid police also seized all of Grover's broadcast equipment and radio gear.

Detectives say Grover claimed he had been in the radio business for 30 years and was former owner of radio station WHNR AM in Winter Haven. He was booked into the Polk County Jail and released the same day after posting a $1,000 bond. Operating an unlicensed broadcast station or making an unauthorized transmission on radio frequency is a 3rd degree felony under Florida state law.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Grover could also face some severe punitive action from the FCC. (KB5TJI, Radio Ink.com, Winter Haven News Chief, others)

**

ENFORCEMENT: FCC FINES BROADCASTER $18000 OVER PAPERWORK

Word that broadcaster Sun Valley Radio has lost a three-year-old appeal to the FCC and will be fined a total of $18,000. This, in two cases involving improperly maintained public files. Jim Damron, N8TMW, reports:

--

The matter goes back to 2005. That's when Sun Valley admitted in renewal filing for KBLQ FM in Logan, Utah, and KKEX FM in Preston, Idaho that it had discovered the stations were missing Quarterly Issues and Programs lists for several earlier quarters. Sun Valley said that it recreated the missing lists and placed them into the public files.

But the FCC staff ruled that Sun Valley was apparently liable for a fine for the missing lists . The agency proposed fines of $9,000 for KBLQ FM and another $9000 for the same type of violations at KKEX FM.

Sun Valley appealed. In its reply the broadcaster argued among other things that the fines were higher than those given to other stations in similar situations. It also noted that its other co-owned stations were in compliance and that no one had been harmed because no member of the public had tried to see the files. It also noted that its voluntary disclosure if the error earned it a reduction.

The FCC now has rejected the appeal. It says that its rules are to be obeyed and that Sun Valley had not proved mitigating circumstances as to

why the fine should be reduced or cancelled.

For the Amateur Radio Newsline, I'm Jim Damron, N8TMW.

--

Sun Valley Radio can either pay the fine or take the matter into the federal courts on appeal. (FCC)

RADIO BUSINESS: NEW QRZ CALLSIGN CD-ROM RELEASED

Turning to the ham radio business scene, the 32nd edition of the QRZ Ham Radio CD-ROM Callsign Database is now available. In addition to the popular QRZ database of callsigns, the also contains over 310,000 e-mail addresses, the latest FCC callsigns issued as of April 2008, over 10,000 Digital QSL Card images and much more. This latest edition also includes a new, faster installation program and a return to the previous disc layout for maximum logbook compatibility. More is on-line at www (dot) qrz (dot) com. (QRZ)

**

HAM RADIO IN THE WEB: CALLBOOK FOR IPHONE AND IPOD TOUCH

And with the popularity of the Apple's mobile devices a ham radio application for these devices could not be far away. Now from Dog Park Software Ltd. comes version 1.0 of CallBook for I Phone and iPod Touch.

CallBook is an Amateur Radio application that allows you to look up call signs via the free WM7D server, the QRZ Online subscription service or the HamCall subscription serve using your Apple portable device. Results can be e-mailed and the QTH can be instantly viewed in the Maps application. More information is on-line at dogparksoftware.com (E-mail)

HAM HAPPENINGS: ARRL FREQUENCY MEASURING TEST ON NOVEMBER 13

The ARRL has announced that its 2008 Frequency Measuring Test will take place Wednesday evening, November 12 at 9:45 PM EST. That works out to be Thursday morning, November 13 at 02:45 UTC.

The Frequency Measuring Test will start with a general QST call from W1AW at exactly 02:45 UTC, transmitted simultaneously on 3597.5 and 7095 kHz. The test will replace the W1AW phone bulletin scheduled at this time. Station Manager Joe Carcia, NJ1Q, recommends that those planning to participate listen to W1AW's transmissions prior to the event to determine which band--or bands--will be best for measurement purposes.

West Coast participants have their own signal to check again this year, courtesy of WA6ZTY. (ARRL)

NAMES IN THE NEWS: AA4RC EXPLAINS HAM RADIO TO 10000 SCOUTS

A word of congratulations to Robin Cutshaw AA4RC who recently got on the air to demonstrate amateur radio and amateur satellites to 10,000 scouts. The scouts were camped out at Alabama's Talladega Speedway as part of an outing. Robin also lead the team hosting the 2008 AMSAT Space Symposium in Atlanta. He's to be congratulated on doing both jobs well done. (ANS)

**

THE SOCIAL SCENE: DX VIDEO RELEASED

The Magnolia DX Association's K5MDX East Ship Island DXpedition video is now on-line. The video documents the first ever activation from East Ship which was officially activated during the period of October 16th to the 19th. We can't show you the pictures on a radio newscast, but here's a sample of the narration track. Take a listen:

--

Audio from narration track. Hear it in the MP3 version of this newscast at www.arnewsline.org

--

East Ship Island is located off the coast of Mississippi south of Biloxi and is counted as part of the Mississippi Islands Group under the Islands on the Air awards program.

The DX operation ended barely a month ago and in what may be a record for video, the show was put together by N-Zero-I-R-S Productions in anout three weeks. Its well worth the 10 minutes it runs to watch. You will find it on the YouTube dot com video website at http://www.youtube.com/watch?v=oFPbR1y0U7I (QRZ.COM)

HAM RADIO IN SPACE - THE ARISS CONTACT DOWN UNDER

An ham radio in space contact between the St. Thomas' Primary School in Brisbane, Australia and the International Space Station took place on Tuesday, November 4th. That's when students at the school had a chance to talk with astronaut and ham radio operator Mike Fincke, KE5AIT. Robert

Broomhead, VK3KRB, is in Glen Waverly with the the story and the sound:

--

Think an international phone call is expensive? Try ringing someone in space.

Using an antenna attached to a crane, 15 students from a small Brisbane school have spoken with a US astronaut live from NASA's International Space Station The children, from St Thomas' Catholic Primary School at Camp Hill on Brisbane's southside, had just 10 minutes to talk with the real-life space traveler and mission commander of the United States Air Force, Colonel Edward Michael 'Mike' Fincke, when the ISS orbited over Brisbane.

Way up north of the state, WIA News Man Felix VK4FUQ fired up his IC 706 on 145.8 FM and there was the ISS coming through loud and clear!

--

Contact Audio here. Hear it in the MP3 version of this newscast at www.arnewsline.org

--

The entire local community at Camp Hill got on board for the event,. Parents and students turned out to listen in the hall and to watch a simulcast outside. St Thomas' principal David Cashman said the school was thrilled to receive confirmation from NASA last year that the school had been accepted to take part
in the program.

Im Robert Broomhead, VK3KRB.

--

The St. Thomas' Primary School is very progressive in teaching space sciences. Not only does it have its own very active radio club. It also teaches such topics as space, science and technology are a part of the curriculum. Students from age 4 to 12 have participate in related activities such as building models of space stations, using a telescope to explore the night sky, building crystal radios and creating an ARISS Web site for the school. A school that is a true portal to the future in the here and now. (WIA News)

**

RADIO FROM SPACE: PHOENIX MARS LANDER GOES SILENT

Radio signals to Earth from the Phoenix Mars Lander have ceased and NASA has officially brought the mission to a close.

The $428 million exploration of the red planet was originally scheduled to last only three months. NASA was able to give it two extensions before the harsh Martian environment finally claimed it.

During its operational lifetime the Phoenix helped collect data on the northern arctic Martian plains. Among its findings was that some Martian soil is alkaline, and that ice may have melted on the Martian surface in the past.

The last communication from Phoenix was received on Sunday, November 9th. (NASA)

**

RADIO ON-ORBIT: HUBBLE SPACE SCOPE REPAIRED BY RADIO

The Hubble Space Telescope is back in business after a month of problems. But NASA now says that readying replacement equipment and parts to keep the on-orbit observatory running will force NASA to delay its final servicing mission beyond February.

In late October the pace agency released an image taken by the telescope's Wide Field Planetary Camera. It was Hubble's first picture radioed back to Earth since a computer problem shut down science operations in September. The photo showed a pair of gravitationally locked galaxies, located more than 400 million light years away in the constellation Cetus. (NASA)

**

HAM HAPPENINGS: DXCC HONOR ROLL LISTINGS DUE

A DXCC 'End of Year' reminder from Bill Moore, NC1L. Moore is the ARRL DXCC Manager and he says that that the end of the DXCC calendar year is rapidly approaching. In order to appear in the printed 'Annual and Honor Roll' listings your submission must be postmarked on or by Wednesday, December 31, 2008.

The DXCC Honor Roll list is scheduled for publication in August 2009 QST. For the 2008 calendar year the minimum requirement to appear in the Honor Roll list is 329 current entities. The Top of the Honor Roll total is 338 for this period. Remember, deleted entities do not count towards the Honor Roll. Moore says to direct comments or questions to dxcc (at) arrl (dot) org. (ARRL)

**

ON THE AIR: RADIO ST. HELENA ON THE AIR

While a bit short in notification time, Radio St Helena Day is set for Saturday, November 15th. The event will be broadcast on 11092.5kHz USB with transmissions to Europe between 2100 and 2230 UTC. The QSL address is: Radio St Helena, PO Box 93, Jamestown, St. Helena, STHL 1ZZ, South Atlantic Ocean. (GB2RS)

**

ON THE AIR: COMMEMORATING THE SINKING OF THE TIRPITZ

Special Event station GB617SQN will be on the air until November 27th. This,to commemorate the 64th Anniversary of the sinking of the World War 2 German battleship Tirpitz..

The Tirpitz was the largest battleship ever built in Europe, with dimensions slightly exceeding those of her sister ship the Bismarck. The raid on November 12th 1944 that sunk the Tirpiz was conducted by Lancaster bombers from the Roy Air Force 617th squadron.

The commemorative station marking the anniversary of her sinking will be on all bands and various modes. QSL information for GB617SQN will be given during the event. (Modern DX)

**

RADIOSPORTS: 2008 CQ WORLD WIDE CONTEST CW

Turning to radiosports news, the 2008 C Q World Wide DX CW Contest is slated to begin at 0000 U-T-C on November 29th. The contests runs for 24 hours ending at 0000 U-T-C on November 30th.

This on the air event has long been considered to be one of the premier global contesting activities. Many consider it to be a particular test of skill and endurance for the international contesting community. A complete set of contest Rules and other operating information is on line at www dot cqww dot com. (CQ)

**

DX

In D-X, word that four French hams plan to be active from the Kingdom of Bhutan. This through November 25 as part of that nations 100th anniversary. They will use the special call A-5100-A and will be activated from three different locations in the south of Bhutan. QSL via F9DK.

JA7GAX will be operating November 15th to the to 20th from the Daito Islands. QSL his operation direct or via the bureau.

DJ4SO will be on the air portable V5 from Namibia until December 4th. His activity will be mostly on CW, RTTY and PSK 31 on 160 through 10 meters. QSL direct or via the bureau.

G3YBY will be on from Brunei as V8FKT from through November 21st. He works mainly SSB and RTTY on 40 through 10 meters running 100 watts into verticals. QSL via G3YBY, through the bureau or via Logbook to the World.

Lastly, listen out for DL3PS operating portable 4X through December 5th. Franz is on a business trip in Israel and will try to hit the airwaves as using SSB, CW and some digital modes on 10 throgh 80 meters during his spare time. QSL direct or via bureau to HB9EHQ.

(Above from various DX news sources.)

**

THAT FINAL ITEM: HAM RADIO HONORS LAST LIVING WW1 VET

And finally this week, ham radio paused on Tuesday, November 11th to honor the last living veteran of World War 1 and all others who have served in the United States armed forces over the years. Amateur Radio Newsline's Mark Abramowicz, NT3V, reflects on Veterans Day, 2008:

--

Courtesy of NBC 25 in Hagerstown, Maryland, that's Frank himself, making a brief contact with the help of a member of the group operating the special event. And, here's more of what was going out over the air.

--

Actuality audio: Hear it in the MP3 version of this newscast at www.arnewsline.org

--

The group set up on Buckles' Charles Town farm for the one-day event. They made contact with more than 200 operators on that day from as far west as Montana and as far as south as the Carribbean. Buckles, during his interview with NBC 25, spoke of his unique accomplishment.

--

Actuality audio: Hear it in the MP3 version of this newscast at www.arnewsline.org

--

Buckles was 17 when all sides signed the Armistice that ended World War I, dubbed the war to end all wars.

Pat Fowler, presidnet of the EPARC, says he was especially ratified by the response of those who made contact with the special event station.

He said many vets as well as non-vets passed along a special salute to Frank for his service.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V in Philadelphia.

--

And to Frank Woodruff Buckles, we wish him many more years of happiness and good health as he continues as the last standard bearer of the veterans for World War 1.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is

==> HURRICANE NETS, WX4NHC ACTIVATE AS HURRICANE PALOMA BATTERS CAYMAN ISLANDS AND CUBA

As Hurricane Paloma -- a Category 4 storm at its peak --threatened the Cayman Islands and Cuba this past weekend, the Hurricane Watch Net (HWN), the VoIP Hurricane Net (VOIPWX) and WX4NHC -- the Amateur Radio station at the National Hurricane Center (NHC) -- were active and standing by to take and relay reports from the affected areas.

WX4NHC and the various hurricane Nets were active beginning at 4 PM EST on Friday, November 7, going through the evening and overnight hours

into Saturday morning. Later that afternoon, hams reactivated the Nets, keeping them open through Saturday night to gather more information from Cuba.

Arnie Coro, CO2KK, was active with Cuban Emergency Nets on 40 meters. He relayed reports of widespread communication outages; at least one communications tower was blown down in Santa Cruz Del Sur. In the province of Camaguey, sustained winds of 95 MPH and gusts to 155 MPH were recorded.

"We had to go through two different relays on 40 meters to gather those reports from Arnie, as propagation -- which is normally good between WX4NHC and Cuba -- was poor," said Assistant WX4NHC Coordinator Julio Ripoll, WD4R. "Arnie's reports were also used in official advisory statements issued by the NHC."

The Cayman Islands also saw their share of the storm. "Through a variety of contacts that we were able to make [in the area], we learned of hurricane force wind gusts measured as high as 100 MPH on Grand Cayman Island," said VoIP Hurricane Net Director of Operations Rob Macedo, KD1CY. "There was significant damage, particularly over Little Cayman and Cayman Brac. We received a relayed unofficial report of a 155 MPH wind gust on Cayman Brac. Roofs were blown off homes and significant damage was reported at resort locations on Cayman Brac."

Ripoll said that the NHC used many of the reports received from the Nets in the official advisory statements issued by NHC forecasters. A complete list of reports received from various sources can be seen on the VoIP Hurricane Net Report Viewer <http://report.voipwx.net/qilan/nhcwx/list_VOIP_records?auth=OK>.

"The efforts of the VoIP Hurricane Net were very helpful, especially during Paloma's track through the Cayman Islands," said Ripoll. "The information relayed by the Nets gave the Hurricane Center forecasters additional insight of what Cayman residents were actually going through. The multi-tasking, multi-mode methods of combining EchoLink, IRLP, VoIP, HF monitoring, Internet Web blogs and direct e-mail is a great example of information gathering without limitations. These hybrid communications efforts -- before and during the hurricane -- to contact hams and non-hams were successful in promoting awareness that people had alternate means of sending and receiving hurricane information during the event. Some of these new contacts will now be better prepared for future storms."

==> ARRL SWEEPSTAKES CELEBRATES DIAMOND ANNIVERSARY THIS WEEKEND

Fans of domestic contesting will take to the airwaves this weekend for the 75th running of the ARRL November SSB Sweepstakes. According to ARRL Contest Branch Manager Sean Kutzko, KX9X, the event started back in 1929 as a competition for handling formal traffic messages and is one of the oldest traditions in Amateur Radio. A complete primer by ARRL Contributing Editor H. Ward Silver, N0AX, on how to participate in

Sweepstakes can be found in the Radiosport supplement in the October 2008 issue of QST.

Kutzko said that the CW Sweepstakes two weeks ago netted some of the highest on-air participation in years: "For the bottom of the sunspot cycle, band conditions were stellar two weeks ago. We've already received almost 1000 logs for the CW portion. I hope conditions will be as good this weekend for the SSB Sweepstakes."

To commemorate this diamond anniversary, the ARRL is offering special prizes. All stations that submit a log with 75 of the 80 ARRL and RAC Sections worked will receive a special free magnet. As in previous years, those who submit logs with at least 100 contacts will be able to purchase Participation Pins.

The major challenge in Sweepstakes is to work a "Clean Sweep," or all 80 ARRL/RAC Sections. "We were concerned that Clean Sweeps would be tough to come by for the CW portion, but thanks to many hams who trekked out to activate some of the rarer Sections, there were many Clean Sweeps," Kutzko said. "We anticipate many more stations on the air for the Phone portion of Sweepstakes -- with a little bit of effort, you too can get a Clean Sweep."

Kutzko said this year's Sweepstakes is offering a special incentive. "This year, we will be awarding a Clean Sweep whisk broom to all stations that make a Clean Sweep," Kutzko said. "Brooms were last available in 1983, the 50th running of Sweepstakes. In addition to the free brooms, Clean Sweep coffee mugs will also be available for purchase. This year's mug will be fine etched glass and will truly be a collector's item."

Thanks to ICOM America, the Principal Awards Sponsor of the November Sweepstakes, certificates will be awarded for first place in each of the 80 ARRL/RAC Sections for all six entry categories; plaques will be available to the overall winners in each entry category, as well as the winners in each Division. "ICOM has provided plaques and certificates for Sweepstakes winners since 2005, and we are grateful for their support over the years," Kutzko said.

As with the CW Sweepstakes, Kutzko is encouraging stations in rare ARRL/RAC sections to get on the air and hand out their section. "Being on the other side of the pileup is tremendous fun. If you live in a rare section like North Dakota, Newfoundland/Labrador, Manitoba or several others, the QSOs you make will be greatly appreciated by everyone you work. If you live in one of these places, this is a golden opportunity for you to be the 'rare DX.' Stations in these Sections get to hear 'Thanks for the Sweep!' more than once during the weekend. Even if your station is modest, your effort to put a rare Section on the air during Sweepstakes will be appreciated by every single station that works you."

Whether you want to go for a Top 10 finish, or simply get on the air to hand out a few QSOs or work on your Worked All States Award (WAS)

<http://www.arrl.org/awards/was/>, Kutzko said the November SSB Sweepstakes is guaranteed fun and excitement. Don't forget to submit your log to Logbook of The World, too! Be sure to check out the complete rules and entry forms <http://www.arrl.org/contests/rules/2008/novss.html>. Come be a part of one of Amateur Radio's finest traditions.

==> IBM TEAMS UP WITH BPL PROVIDER TO OFFER SERVICE IN SEVEN STATES

On November 12, IBM announced that it has signed a $9.6 million deal with International Broadband Electric Communications (IBEC) to install equipment and provide BPL service to almost 350,000 homes in Alabama, Indiana, Maryland, Pennsylvania, Texas, Virginia, and Wisconsin. According to the Associated Press, IBEC Chief Executive Scott Lee said the network, which will be funded by $70 million in low-interest federal loans from the Department of Agriculture, should be in place in about two years. IBEC currently provides broadband to only about 1400 customers, most of them beginning to receive service in the past 18 months.

"IBEC's equipment doesn't use the ham bands," said ARRL Laboratory Manager Ed Hare, W1RFI, "making it less likely that they will have any interference complaints from amateurs. Their equipment, however, does interfere with shortwave broadcast and other spectrum, but in the US, not many users have complained. IBM has been in the BPL business for a few years now, so this venture is nothing new for them." IBEC staff member Brent Zitting, KB4SL, serves as a member of ARRL's EMC Committee.

IBM is the first major systems integrator to enter the market. According to an IBEC press release announcing the joint venture, IBM will provide overall project management, oversight and training of the line crews who will be installing the BPL equipment. IBEC will provide the BPL technology and equipment and serve as the Internet Service Provider (ISP) to these rural residents.

A 2006 FCC study reported that fewer than 5000 homes receive their Internet connections via power lines. IBM and IBEC's joint plan, Lee said, will serve residents, of whom about 86 percent have no cable or DSL access, in the seven states.

According to reports, IBEC's strategy is to sign up electric cooperatives that provide power to sparsely populated areas across the eastern United States. Rather than compete toe-to-toe with large, entrenched cable or DSL providers, IBEC is looking for customers that have been largely left out of the move to high-speed Internet.

"Although the BPL industry is making progress on the EMC issues," Hare explained, "this process will not be complete until it supports regulations and industry standards that reflect its successful models. At recent meetings of the IEEE P1775 BPL EMC standards committee -- although utility and radiocommunications stakeholders wanted to include an informative annex on the ways to address BPL interference, as well as

a procedure to address complaints -- some in the BPL industry, including the representative from IBEC, blocked moving the EMC standard to IEEE ballot with the annex included."

==> SPECTRUM DEFENSE: THE ARRL'S PRIMARY MISSION

Defending and enhancing access to the Amateur Radio spectrum is the primary mission of the ARRL. According to ARRL Chief Executive Officer David Sumner, K1ZZ, the League has not only protected the bands, but has also added several new ones, despite exponential growth in the variety and number of radio frequency devices in the hands of consumers and businesses. "Even our most disappointing defeat -- the loss of the bottom 40 percent of the 220 MHz band some two decades ago -- gave us upgraded status, from shared to exclusive, in the remaining 60 percent of the band," he said.

Sumner said that amateurs will soon have cause to celebrate: March 29, 2009 marks the date that high-powered international broadcasting stations will be removed from the heart of the 40 meter band. "We are working with the broadcasters to make sure the change takes place as agreed at the 2003 World Radiocommunication Conference (WRC)," Sumner said. "While it's probably too much to expect 100 percent instant compliance, we know that the responsible broadcasters are preparing to move out of the 7100-7200 kHz segment -- doubling the size of the worldwide 40 meter band and making this popular band more useful than it's been in 70 years."

At the WRC in 2007, the Amateur Radio Service earned its first low-frequency (LF) allocation, 135.7-137.8 kHz; however, here in the United States, amateurs will not gain access to this new band automatically when the Final Acts of the conference take effect on January 1, 2009. "We must petition the FCC to implement the allocation, and we know the petition will not be granted without an argument -- because we've been down this road before," Sumner explained. "Twice in the past, the ARRL has sought an LF allocation. Both times our request was opposed by the Utilities Telecom Council (UTC) -- the same organization that has opposed our efforts to protect radio services from Broadband over Power Lines (BPL) <http://www.arrl.org/tis/info/HTML/plc/> interference."

Sumner recounted that the ARRL's fight against BPL interference has been going on for six years. "Last year, in the wake of Federal Communications Commission decisions that did not adequately protect licensed radiocommunication services from interference from BPL systems, the ARRL even went to court to challenge the FCC and won!" he said <http://pacer.cadc.uscourts.gov/common/opinions/200804/06-1343-1112979.pdf>. "On April 25, the United States Court of Appeals for the District of Columbia Circuit confirmed what the ARRL has been saying for years about how the FCC was handling the BPL interference issue: FCC prejudice tainted the rulemaking process."

On July 9, the Court went one step further, ordering the FCC to pay the ARRL more than $6000 toward the League's costs in pursuing the appeal. "While this is a tiny fraction of our total investment," Sumner said, "the award affirmed that -- contrary to the 'spin' the FCC had been trying to give to the Court's decision -- the ARRL substantially prevailed in its appeal."

Calling the Court's decision "a tremendous victory for radio amateurs and other licensed users of the radio spectrum -- indeed, for anyone who cares about the federal administrative process," Sumner said that the remand does not guarantee that the FCC will correct its errors. "We face another round of technical arguments," he said. "No doubt the FCC's technical staff, many of whom want to do the right thing, will remain under heavy pressure to ignore the laws of physics and give preference to wishful thinking once again. When the FCC reopens the BPL proceeding as the Court has ordered, we must leave no room for these technical issues to be settled on anything other than technical grounds. There's more work to do. It is only through the support of thousands of ARRL members and friends that we have managed to come this far. But it took great effort, including our frontal assault on the flawed FCC proceedings, to get their attention. Together we can celebrate all that we have accomplished on the BPL front over the past six years!"

BPL is not the only challenge facing the League, Sumner said, pointing out that preparations for the upcoming WRC in 2011 are already underway.

The key WRC-11 issues for Amateur Radio are:
* A possible allocation near 500 kHz. This would provide amateurs' first access to the lower part of the medium frequency (MF) band. Sumner said a "600 meter" band offers exciting possibilities for reliable groundwave communication through the application of digital signal processing techniques to a portion of the spectrum that is as old as radio itself.
* Defense against a push to allocate spectrum between 3 and 50 MHz for oceanographic radar applications.
* Support of an initiative to provide better protection for radio services against interference from short-range radio devices.
* Consideration of regulatory measures for software-defined radio and cognitive radio systems, which offer both opportunities and threats to existing radio services.
* Selection of agenda items for the WRC to follow (tentatively planned for 2015).

"ARRL staff and volunteers are hard at work on your behalf, teaming up with International Amateur Radio Union (IARU) volunteers from around the globe to build the strongest possible case for Amateur Radio at WRC-11," he said, calling on all amateurs to help protect Amateur Radio's precious spectrum. "Once again, your financial commitment to spectrum defense is vital to our ability to protect your access to radio spectrum. Your contribution to the 2009 Spectrum Defense Fund will provide the financial resources required for us to represent you at WRC-11, and to respond when the FCC reacts to the BPL remand decision. Contributions to the 2009 Spectrum Defense Fund are coming in, but the

goal of raising $300,000 to support ARRL's representation of members by November 30 is an uphill climb. We cannot reach our goal without contributions from ARRL members."

To help in the ARRL's ongoing mission to protect our valuable spectrum, please visit the Spectrum Defense area on the ARRL Web site <https://www.arrl.org/forms/fdefense/>. You can also reach ARRL Chief Development Officer Mary Hobart, K1MMH, at 860-594-0397 or via e-mail <k1mmh@arrl.org>. New special gifts are being offered for contributions, including a new 2009 mug and pin. More details on thank you gifts can be found on the donation form for the Spectrum Defense Fund.

==> ARRL SAYS "THANK YOU" TO VETERANS

On Tuesday, November 11, Veterans Day -- called Remembrance Day or Armistice Day outside the US -- was celebrated all over the world. This day -- marking the end of World War I, the "War to end all Wars" -- has been set aside to honor all who have served their country. It was on November 11, 1918 -- on the 11th hour of the 11th day of the 11th month -- that Germany signed the Armistice, formally ending the hostilities that had been ongoing since 1914.

The ARRL would like to take this opportunity to thank our service veterans. Whether they served on active duty or reserve, during peace time or time of conflict, they served their county with honor. We also would be remiss if we did not remember the families of those veterans who kept the homefires burning bright; without their love and support, our veterans would have indeed been alone.

ARRL Headquarters has its share of service veterans: Contributing Editor Al Brogdon, W1AB (Army); Publications Sales Associate Mark Dzamba, KB1FMY (Air Force); Assistant VEC Manager Perry Green, WY1O (Army); Volunteer Archivist Charles Griffen, W1GYR (Air Force); Technical Editor Joel Hallas, W1ZR (Army); News Editor S. Khrystyne Keane, K1SFA (Coast Guard); DXCC Manager Bill Moore, NC1L (Army); Reprints Specialist Tony Nesta, AA1RZ (Navy); Membership and Volunteer Programs Manager Dave Patton, NN1N (Navy); Chief Technology Officer Paul Rinaldo, W4RI (Army); Technical Relations Specialist Jon Siverling, WB3ERA (Army); Field and Regulatory Correspondent Chuck Skolaut, K0BOG (Air Force); Education & Technology Program Coordinator Mark Spencer, WA8SME (Air Force), and Archivist Perry Williams, W1UED (Air Force).

Thank you for your service -- your sacrifice and the sacrifice of your fellow service members is not forgotten.

==> SATELLITE SERVING AS VOICE REPEATER EXPECTED TO GO QRT BY END OF YEAR

Launched in January 1990, AMSAT-OSCAR 16 (AO-16) -- a digital satellite -- has been operating as a voice repeater since January 2008, using FM voice on the uplink and transmitting DSB voice on the downlink (best received on SSB) <http://www.arrl.org/news/stories/2008/01/23/100/>. But according to the satellite's command team, the satellite's orbit might

force this to end sometime before the end of the year.

According to Mark Hammond, N8MH, a member of the AO-16 command team, AO-16 has a hardware/watchdog timer that resets the satellite and shuts the transmitter down. This timer in AO-16 will fire -- and cannot be reset -- when the satellite's temperature is 15 degrees Celsius or cooler. When the timer "fires," it shuts down the transmitter. "When the bird's temperature is more than 15 degrees Celsius," Hammond said, "the hardware timer behaves and continuous operations are sustained."

The satellite's temperature depends upon solar illumination. Hammond said that the "magic number" is around 85 percent of the orbit in sunlight: If the orbit provides AO-16 with less than 85 percent illumination, the spacecraft's temperature falls below 15 degrees and the hardware timer fires. "Illumination projections, as well as subsequent temperature predictions, suggest that we might be able to sustain operations until sometime in the window of November 22 until December 4, 2008," Hammond predicted. "So if you want to make some AO-16 contacts, you had better get them as soon as possible!"

Hammond said that long term-orbital projections suggest that if the satellite hardware remains fundamentally unchanged -- such as no deterioration of on-board components -- "it will be nearly 10 years before AO-16 receives sufficient illumination to warm up the spacecraft enough to again support sustained operations."

It is possible that the transmitter on AO-16 will turn off sometime in the next few days or weeks, Hammond said. "This requires some commanding to get it running again, meaning a pass over the eastern coast of the United States is required for a change in operational status. We expect that as the spacecraft cools down, transmitter shutdowns will become more frequent. You can be sure that we'll continue to probe the craft with commands, in hopes that we something will change in a good way that will allow us to use the bird for operations of some sort."

AMSAT Vice President of Operations Drew Glasbrenner, KO4MA, said the satellite hears very well; the reduced bandwidth by using either USB or LSB on the ground station receiver "allows for a very robust downlink. Tuning the downlink is just like on a linear transponder, meaning it is tight and with fast Doppler. Uplink tuning is not required, just as with the FM mode V/U satellites. My personal observations include being able to access and hear the satellite within one degree of the horizon, much lower than any other current bird for my location [in Florida]. This should be an easy satellite with omni antennas and a 70 cm preamp."

AO-16's uplink is 145.9200 MHz FM; the downlink is 437.0260 MHz SSB. Users are asked to restrict their uplink power to a reasonable power level, and not to transmit without being able to hear the downlink; all general single-channel guidelines apply. "Enjoy this grand old bird while you can!" said Hammond.

==> ARRL TO OFFER SELF-STUDY COURSE ON DIGITAL TECHNOLOGY FOR EMERGENCY COMMUNICATIONS

With digital technology becoming an integral part of Amateur Radio, hams interested in Emergency Communications now have a new tool to help them take advantage of emerging modes such as Packet Radio APRS, Winlink 2000, IRLP, EchoLink and WIRES-II, D-STAR, APCO25, HF sound card modes and Automatic Link Establishment (ALE). "The ARRL Digital Technology for Emergency Communications Course" will introduce hams to all of the ways Amateur Radio operators are using digital technology as a valuable emergency communications tool <http://www.arrl.org/catalog/?item=1247>.

Written by ARRL Publications Manager and QST Editor Steve Ford, WB8IMY, this self-study CD-ROM will answer such questions as:
* Can you transfer supply lists or personnel assignments between emergency operations sites?
* Can you get critical e-mails to the Internet if a connection goes down?
* Can you relay digital images of damage at specific locations?
* Can you track the locations of emergency personnel and display them on computer maps?

Illustrations, screenshots, Internet links and audio files are used to demonstrate transmission modes and equipment configurations. Bite-sized learning units and interactive knowledge checks make learning interesting and fun!
"This course is a great starting point for anyone interested in the public service applications of digital communications technology," said Ford. "The ARRL Digital Technology for Emergency Communications Course" is available from the ARRL for only $49.95.

Minimum System Requirements for CD-ROM -- Microsoft Windows Vista/XP/2000/NT/98/95 or Apple OS X; 200 MHz processor; 32 MB RAM; sound card and speakers; 4-speed CD-ROM drive or higher. Requires Web browser -- Microsoft Internet Explorer 6.0, Mozilla Firefox 2.0, Apple Safari 3.0 or later versions. Some documents require Adobe Reader.

==>SOLAR UPDATE

Tad "We lived, felt dawn, saw sunset glow" Cook, K7RA, this week reports: We soon may be talking about a day or two without sunspots as the norm, perhaps when looking at a preceding month -- quite the opposite of noting the few days with sunspots. It seems like a long time ago because of the long strings of spotless days. We saw eight days in a row with visible sunspots around mid-October, followed by another eight days around the start of November, then after just three days of no spots. By the end of today -- Friday, November 14 -- we may see five straight days, possibly followed by more. Sunspot numbers for November 6-12 were 11, 0, 0, 0, 16, 18 and 21 with a mean of 9.4. The 10.7 cm flux was 68.6, 67.8, 68.3, 68.4, 69.3, 71.4 and 70.9 with a mean of 69.2. The estimated planetary A indices were 1, 8, 14, 12, 3, 1 and 2 with a mean of 5.9. The estimated mid-latitude A indices were 0, 7, 11, 10, 3, 1 and 4 with a mean of 5.1. For more information concerning radio

propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Lieutenant Colonel John McCrae's "In Flanders Field" <http://www.arlingtoncemetery.net/flanders.htm>.

==>IN BRIEF:

* This Week on the Radio: This week is the ARRL EME Contest on November 15-16 and the 75th running of the ARRL Sweepstakes Contest (SSB) on November 15-17. The NCCC Sprint is November 14.The JT Hamradio-50 Anniversary DX Contest and the Feld Hell Sprint are November 15. The SARL Field Day Contest, the All Austrian 160 Meter Contest and the RSGB 2nd 1.8 MHz Contest (CW) are November 15-16. The EU PSK63 QSO Party is November 16, the Run for the Bacon QRP Contest is November 17 and the NAQCC Straight Key/Bug Sprint is November 20. Next week, the YO International PSK31 Contest is November 21. The LZ DX Contest is November 22-23. The SKCC Sprint and the RSGB 80 Meter Club Sprint (CW) are both on November 26. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, November 23, 2008, for these online course sessions beginning on Friday, December 5, 2008: Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Technician License Course (EC-010), Analog Electronics (EC-012) and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cep@arrl.org>.

* ARRL HQ to Close for Thanksgiving: ARRL Headquarters will be closed Thursday, November 27 and Friday, November 28 in observance of

Thanksgiving. There will be no W1AW bulletins or code practice transmissions those days. The ARRL Letter will be published on Wednesday, November 26, but there will be no ARRL Audio News on Friday, November 28. ARRL Headquarters will reopen Monday, December 1 at 8 AM Eastern Standard Time. We wish everyone a safe and bounteous Thanksgiving holiday.

* WorldRadio to Cease Print Publication: In a joint statement, WorldRadio Publisher Armond Noble, N6WR, and CQ Publisher Dick Ross, K2MGA, announced that WorldRadio magazine will no longer be published as a print magazine. According to the announcement, CQ Communications Inc has acquired WorldRadio and plans to continue it as an online publication on CQ's Web site. WorldRadio subscribers will have their subscriptions transferred to CQ magazine. Readers will be notified of details as plans are finalized.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org
==>ARRL News on the Web: <http://www.arrl.org>
==>ARRL Audio News: <http://www.arrl.org/arrlletter/audio/> or call 860-594-0384

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including

delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or

members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should

not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including | MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting | to receive many article submissions asking about free or low-cost | alternatives for accessing Usenet newsgroups such as ours. We initially | permitted this topic in light of the significant impact to many of our | readers due to this loss of access through their ISP's. However, this | subject is arguably off-topic for our newsgroup, is better answered by | other sources, and better discussed in other venues. Because of this, | we will no longer approve submissions that request or suggest where to | obtain access to Usenet newsgroups. For more information about this | topic, please consult the following: |

When I plug in the speaker mic to the TH-F6A I can transmit but no one can hear audio from my radio. I have checked option 9 and sp.mic is selected as the option for the speaker mic jack. Anyone have any ideas what the problem could be?

That is the correct setting for option 9 for using a speaker-mike. That's the setting on my TH-F6A when I use Kenwood's earbud speaker-mike, and it transmits fine provided I move the mike/PTT up to my lips instead of leaving it clipped to my shirt pocket.

Maybe the microphone is defective.

Maybe there is a broken wire in the cord of your speaker-mike.

Does it transmit properly with a new or different speaker-mike?

> He doubled the 1102 Q's I was so proud of, without even working me!

I'm impressed with 1102 Q's myself. Last field day the club worked
for 24 hours and got less Q's with about 8 operators. Of course we
where not seriously trying to score, but it was a lot of work (and
fun).

There will always be somebody pushing the limits with better antennas,
higher towers, more power, mountain top shacks and other things I
don't have and cannot afford. The fun is in the attempt and the
reward is that my skills get better. You are doing great!

At the bottom of the sunspot cycle. With a single operator. Plus a clean sweep (which isn't always a given no matter how many QSOs are made).

Works out to just under 92 QSOs per hour, every hour, for the entire 24. One QSO every 39.2727...seconds.

Plus they are all different stations.

Now *THAT'S* impressive!

Amateur Radio Newsline" Report 1632 - November 21, 2008

SPECIAL NOTICE: DUE TO OUR COVERAGE OF THE CALIFORNIA FIRETORMS AND OTHER BREAKING NEWS THIS WEEKS AUDIO NEWSCAST RUNS 34 MINUTES AND CONTAINS THREE BREAKS.

Amateur Radio Newsline report number 1632 with a release date of Friday, November 21st, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams respond to the Southern California firestorms, C-Q calls on the FCC to appoint a replacement for rules enforcer Riley Hollingsworth, more tower problems for hams in the U-S and the case of the booby-trapped repeater jammer in the UK. Find out the details on Amateur Radio Newsline" report number 1632 coming your way right now.

**

RESCUE RADIO: THE CALIFORNIA FIRESTORMS

Ham radio was quick to respond when a series of wind-driven firestorms erupted across southern-California. The first of these brushfires was spotted in the north-east corner of Los Angeles San Fernando Valley in the town of Sylmar. Bill Pasternak, WA6ITF, is in the newsroom where you can still smell the smoke.

--

The first of these brushfires was the Sayre fire spotted in the north end of the town of Sylmar. That's at the north-east corner of Los Angeles well known San Fernando Valley and literally 7 miles and one mountain south of the Newsline studio.

And as the fire widened and intensified, hams associated with Los Angeles A-R-E-S were called out to provide communications support to Olive View Hospital which experienced a power and telephone outage at a time when flames were approaching and patient evacuation was imminent.

Marty Woll, N6VI and Tom Turner KI6CCW were immediately dispatched to the scene. Olester Santos Ki6RWR, Jim Curio, KI6FGV, Wyatt Underwood, K6LZL and District Emergency Coordinator David Greenhut, N6HD, provided net or operational support. The net continued until approximately 7:20 on the morning of November 15th but the fire continued to rage on.

The battle against this fire continued throughout the weekend with many road closures. At times ham radio operators found themselves advising one another on which roads were open passable and which were not:

--

Unknown ham operator: "The 118 to the 405, the 118 to the 210, the 210 to San Fernando Road..."

--

Early on Saturday morning, November 15th ARES activated a net is over the Disaster Amateur Radio Network repeater system. The net exchanged fire observations and kept its ears open for both communications and power outage in and around Los Angeles County. All licensed amateur radio operators were encouraged to provide observation and participate.

Meantime, in Orange, Riverside and San Bernardino counties brush fires also sprang up. Thousands were evacuated and many homes were damaged or destroyed by the flames. Gordon West, WB6NOA, was at a Red Cross evacuation center when he filed this report:

--

WB6NOA: "Here in Orange County, southern California, our local Red Cross ham radio communications team was taking part in an early Saturday morning RACES drill when the fire hit. At the conclusion of the training, we hear a ham radio operator call on 2 meters: "&this is not a drill message. We have a wildfire "

Within an hour this small Chino Hills wildfire was a raging inferno, fanned ny 50 MPH winds associated with our Southern California Santa Ana high pressure system.

Our 60-member communications team out of Orange County was dispatched to provide communications at evacuation centers in shelters along with other hams, but we had to keep moving shelters because the flames kept coming closer and closer. Ultimately, two shelter with ham radio Red Cross communicators were set up for four days of communications handling messages in and out between the shelter and our local Orange County chapter. Many of our clients in the shelters lost everything and they appreciated everything that ham radio operators were doing.

211 homes (in the area) were damaged or destroyed. Huge spot fires got as far as five miles away were reported by ham operators. The bamnds were flooded -- 2 meters and 440 -- with orderly ham radio communications supporting those local served agencies.

--

The firestorm also lead a southern California hospital to evacuate and ham radio helped coordinate the operation. Amateur Radio Newsline's Joe Moell. K0OV, has the details:

--

Shortly before noon on Saturday, November 15, a wildfire broke out northeast of Brea-Olinda High School. It became part of the Freeway Complex firestorm that has burned over 28,000 acres and damaged or destroyed over 250 homes in Orange, Los Angeles, Riverside and San Bernardino counties. At the time, members of the Orange County Hospital Disaster Support Communications System, an ARES group best known as HDSCS, were participating in an annual messaging drill with city and county RACES groups and the Red Cross. News of the fire terminated the drill and HDSCS established a net to determine which members could respond to hospitals if needed. There was concern that this new fire could threaten Kindred Hospital in Brea if it jumped westward over the 57 freeway.

When the fire did jump ten freeway lanes about 12:45 PM, Net Control sent five members to this hospital so that they could get there before traffic became too congested. At 2:45 PM, as the operators were in place at Kindred and in communication with the net, a page was received from St. Jude hospital in Fullerton and a call came in from Placentia-Linda hospital in Placentia, also requesting Amateur Radio operators in accordance with pre-established procedures. St. Jude was receiving heavy smoke and its Emergency Department had gone on diversion status. Placentia-Linda had been advised that it might receive chronic pulmonary patients from nearby skilled nursing facilities. HDSCS members were immediately sent from the net to these facilities. A member was also sent to Orange County Emergency Medical Services Agency operations center in Santa Ana.

At 3:15 PM, the decision was made to close and evacuate the Kindred Brea hospital, as reported by Reid Green KF6LOK to Net Control April Moell WA6OPS.

--

WA6OPS: "What we understand is that all 37 are going to other Kindred facilities, correct?"

KF6LOK: "That is confirmed. Kindred Brea is on full evacuation."

--

Clearing the facility required the movement of all patients by ambulance to four other Kindred hospitals in Orange and Los Angeles Counties. Ten of these patients were fully dependent on ventilators. HDSCS operators assisted with communications throughout the evacuation. The HDSCS net also kept officials at the Emergency Medical Services Agency fully informed of the situation. All patients were under way by 6 PM. Ham radio support continued at Placentia Linda Hospital until that evening and at St. Jude hospital through Saturday night and into Sunday afternoon.

There's no doubt that having ham radio at these facilities to provide additional communications paths and back up the overloaded telephone lines was a godsend to harried members of the hospital staff and administration during this difficult time.

--

According to K0OV, in addition to the evacuation of Kindred Brea hospital his group also provided communications assistance to two other hospitals during the firestorm emergency.

Last but by no means least, ham radio participation in the firestorm emergency relief effort caused one event to be cancelled. That one was to be a training session for hams involved in disaster communications:

--

KG6DNY: "The CERT refresher scheduled for tomorrow at Fire station 88 has been cancelled due to the brush fires. End of QST. Thanks for the frequency guys. KG6DNY clear."

--

As this report is recorded on Thursday, November 20th, most of the fires are contained or controlled but they are still fresh on everyone's mind. All you have to do is step outside and take a deep breath to know what happened only a few days ago.

In the newsroom, not far from the remnant of the Sayre fire, I'm Bill Pasternak, WA6ITF, reporting for the Amateur Radio Newsline.

--

As we go to air, all of the southern California firestorms have been contained, but tinder dry conditions remain across the region. This means that all first responders and the hams that back them up remain on high alert. (ARNewsline" with input from KA6GSE, WB6NOA, K0OV, others.)

RESCUE RADIO: THE BIG CALIFORNIA SHAKEOUT

Ironically, the first of the southern California firestorms hit only hours after hams across the region had taken part in one of the biggest state-wide disaster drills ever held. Called the Big Shakeout, the scenario for the exercise focused on a mock 7.8 magnitude earthquake which would have the potential to devastate the region. In Orange County, some of the same hams who would later volunteer for fire communications duty took part. Again, Joe Moell, K0OV:

--

In Orange County, ham radio operators were drilling side-by-side with hospital staff members. The Hospital Disaster Support Communications

System, an ARES group, fielded the largest number of members to help the largest number of hospitals of any single-day drill in its 28-year history.

Forty-four HDSCS members went into 32 hospitals. The emphasis was a realistic near-real-time response using the group's automatic response procedures. Instead of members going inside the hospitals and setting up prior to the simulated shaker, these responders pre-staged nearby and were dispatched by Net Control into the facilities during the chaos after the temblor. This taught them what it is really like to enter, get to the Hospital Command Centers and get on the air with their portable equipment under these difficult conditions.

--

WA6OPS: "Copy W7KTS we'll get to you in a minute. WD8ICK what is your location?"

WD8ICK: "I am away from home at Brookhurst and Talbert in Fountain Valley."

WA6OPS: OK, we don't have anybody yet at Orange Coast Hospital, so please proceed there. Your tactical call will be Orange Coast. Copy?"

WD8ICK: "QSL, this is WD8ICK."

--

Members received their assignments just a few hours before the event. For training purposes, they were not told in advance which hospitals would be simulating evacuations and which would be receiving simulated evacuees. The hams got that information, and all the other message traffic to be handled, as they worked shoulder-to-shoulder with the Incident Commander, the Liaison Officer, and other staff members in Hospital Incident Command System positions. Messages sent and received included requests for ambulances to move evacuated victims, including Neonatal Intensive Care Unit infants. They also passed simulated orders for oxygen tanks and for pharmaceuticals such as Cipro and morphine.

The Great Shakeout wasn't the only time that Orange County hams have drilled with their hospital counterparts recently. It was actually the sixth time so far in 2008 in which HDSCS members have participated directly with hospital staff members in drills that the hospitals must perform to maintain their accreditation.

From Orange County, California, this is Joe Moell K-zero-O-V for Amateur Radio Newsline.

--

This exercise was the largest ever to take place in the country and involved the participation of millions of California residents and a large number of ham radio communications volunteers. The ham radio group in Orange County was just one of many. (ARNewsline", K0OV)

**

ENFORCEMENT: CQ TO THE FCC - NAME A SUCCESSOR TO RILEY - NOW

CQ magazine is calling on FCC Enforcement Bureau Chief Kris Monteith to move swiftly to name a successor to Riley Hollingsworth, K4ZDH, as Special Counsel for Amateur Radio, and to bring FCC enforcement back to the ham bands.

Writing in his "Zero Bias" editorial in the December 2008 issue, CQ Editor Rich Moseson, W2VU, noted that the Commission not only has failed to name a successor to Hollingsworth, but that not a single amateur enforcement action has been taken since his retirement this past July. At that time, the editorial notes, the amateur radio community was assured that the Commission's dedication to enforcement in the Amateur Service would remain strong. But Moseson says that the FCC's total inaction since July suggests otherwise:

--

Moseson: This is deeply disturbing and of grave concern. It would be a tragedy, and a travesty, if the FCC were to go back on its promise to be there for us and allowed amateur enforcement to once again drop off the radar."

--

The need for continuing amateur enforcement was reinforced after the December issue was went to press. Thats when CQ was informed of an outburst of racist diatribes on 20 meters, including the transmission of recordings of a Hitler rally and of Nazi marching songs.

Moseson notes that this type of behavior was all too common before Hollingsworth became the rules enforcer a decade ago. Most of it quickly disappeared once it became obvious that someone in authority was paying attention. But now, only a matter of months since Hollingsworth retired from public service it has become obvious to the hams wanting to reek havoc that they are once again free to do whatever they please without fear of any consequences:

--

Moseson: "The FCC must get back into the amateur enforcement business, and it must do so quickly before the situation once again gets out of control. Enforcement Bureau Chief Monteith must act promptly to name a successor to Riley Hollingsworth and assure amateurs that they have not once again been abandoned by the Commission."

--

You may recall that in his pre-retirement comments that Riley Hollingsworth urged the ham radio community to not let the FCC abandon ham radio enforcement. The CQ decision to pressure the FCC to name a successor to Hollingsworth kind of echos his words. The full text of Rich Moseson's editorial is on-line at www.cq-amateur-radio.com, linked from the December issue highlights. (CQ)

RADIO LAW: ANOTHER APPEAL IN THE PA TOWER CASE

A Pennsylvania ham is facing yet another appeals board hearing. This after a neighbor of Charles Mills, W3YNI, says that he is not happy with the latest decision the zoning commission rendered in the case. Mark Abramovich, NT3V, reports:

--

W3YNI would like it to end soon.

The southwestern Pennsylvania amateur just can't seem to satisfy neighbors who don't want the emergency coordinator for his community to have a 53-foot-tower on his property.

For those of you who are unfamiliar with the story, Charles Mills has been battling for many months to satisfy the township zoning hearing board and neighbor complaints that his tower doesn't meet requirements.

Mills' biggest adversary it turns out is neighbor John Ducar, who has made it clear he doesn't want a tower right near his property.

The Pittsburgh Tribune Review newspaper, quoted Ducar as saying at the Nov. 13 hearing:

"This is a major eyesore. This is a major aesthetic nuisance."

That's the crux of his dispute with Mills. The trees that that neighbor insisted Mills put up as part of a plan to screen the tower simply were not enough.

Ducar wants Mills to move the tower, but Mills has said that's not possible given the size of his property and the contour of the land.

So now, Ducar wants the township to revoke the permit it granted to Mills in August to put up the tower.

Mills' attorney, Mike Lazaroff, K3AIR, worked closely with Mills and the township to satisfy all its requirements. And Mills says he'd rather work with the community than take the matter to court.

All of this may be mute next month when a new law regarding regulation of amateur radio towers goes into effect in Pennsylvania.

The law, dubbed Pennsylvania's PRB-1 basically tells municipal governments they must reasonably accommodate amateur radio service communications and, quoting the law here, "shall impose only the minimum regulations necessary to accomplish the legitimate purpose of the municipality."

Now, legitimate purposes, according to the law, known as Act 88 of 2008, shall include a clearly defined health, safety or aesthetic objective of a municipality such as preserving a historical or an architectural district.

And, while there is discussion in the law of ensuring safety requirements of a tower structure, it also stipulates, quoting here: "No ordinance, regulation, plan or any other action shall restrict amateur radio antenna

height to less than 65 feet above ground level."

There have been lots of posts on the ham radio boards about Mills' situation. And, there is overwhelming support for his cause.

Lazaroff, K3AIR, gave the zoning board 12 letters from neighbors supporting Mills. He also gave them a petition signed by 47 township residents who support Mills.

Perhaps Melinda Young, one of those who composed a letter to support Mills, said it best when she wrote:

"I have great piece of mind knowing that Charles Mills has a tower so that if and when there is another disaster such as 9-11 or something worse, God forbid, we have someone in our township that we can count on to communicate and coordinate our emergency efforts."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

The board is expected to render a decision when it meets December 11th. We'll let you know what they decide. (ARNewsline")

**

RADIO LAW: SAN DIEGO PROPOSES TOWER RESTRICTIONS

The City of San Diego , California, seems poised to try to violate the states PRB One type law and impose some severe tower and antenna restrictions on its ham radio community.

Back in 2003 then Governor Gray Davis signed into law a measure that assures California hams that their tower and antenna needs would be reasonably accommodated. Now it appears as if San Diego is ignoring that state-wide edict as it prepares to enact a set of regulations that would require an expensive site development permit. Not only that, but it would also direct that a tower retracts when not in use and that the a tower and its antenna be located in the least visible location from adjacent public rights of-way and adjacent properties. Last and by no means least that it be removed if not used for 2 years.

Hams in the area are more than a bit appalled at the actions of the areas legislators, especially in a time of a very severe city budget shortfall. Also, the city admits that it gets only one or two tower permit requests from hams every year.

The hams of San Diego say that the proposed new regulation is not needed. Also that it runs afoul of state law. They say that they will fight to keep the proposal from becoming a city ordinance. If it does, look for it to be challenged by the San Diego ham community, in the courts. (WA6ILQ, others)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RESTRUCTURING: CANADA TO GIVE HAMS EXPERIMENTAL 600 METER BAND

Some Canadian hams will soon have access to the 600 meter very low frequency band. This after telecommunications regulator Industry Canada accepts a Radio Amateurs of Canada proposal that will permit selected Canadian radio amateurs to operate in the vicinity of 500 kHz.

Industry Canada has authorized Radio Amateurs of Canada to recommend which hams who would be licensed to operate in the 504 to 509 kHz band. Power output would be a maximum of 20 watts ERP and bandwidth up to 1 kHz. Stations operating in this band would be technically operating under Special Developmental Licenses although they would all be radio amateurs. Distinct call signs would be used and the licenses would be renewable annually subject to the amateur demonstrating the research he has carried out.

Hams taking part in these operations would support Canada's efforts to action a proposal on the agenda of the 2011 World Radio Conference for a new amateur allocation in the 600-meter band. More information will follow in upcoming Radio Amateurs of Canada bulletins. (RAC)

**

HAM HAPPENINGS: ALE AT 500 DAYS

The Global Automatic Link Establishment or A-L-E High Frequency Network believes it is the first net to operate continuously for more than 500 days. This, on all international amateur radio shortwave bands simultaneously.

The main purpose of the network is to provide efficient emergency and disaster relief communications to remote areas of the world. Beginning with a core group of 6 North American radio operators in June 2007, the net rapidly expanded to cover large areas of the planet with 24 hour a day, 7 day a week digital communications.

Relying on radio communications, the net is a system of interconnected base stations scans the various radio bands from 3.5 Megahertz to 28 Megahertz every 10 seconds. Using this system net members are connected with each other and can send internet email or cell phone mobile text messages from the field. More about A-L-E is on line at hflink.net. (HFLink release)

**

NAMES IN THE NEWS: YL DXER NEEDED

Bill Horner, VK4FW, a member of the Oceania Amateur Radio DX Group says that one more Y L is needed to participate in the upcoming VK9LA operation. He says that there are currently 5 YL's on the team but only 2 are operators. A third experienced female ham is needed. If you are interested in going on this operation please e-mail vk4fw(at) westnet (dot) com (dot) au for more information. (Southgate)

**

THE SOCIAL SCENE: 6TH IDXC CONVENTION IN APRIL 2009

Turning to the ham radio social calendar, word that Italy's 6th International DX Convention will be held April 18th tp the 19th, 2009. Organized by the Strange Radio Team the venue is the city of Paestum near Salerno. More details will be forthcoming in January and posted at www.strangeradioteam.com. (OPDX)

**

DAYTON HAMVENTION 2009: AWARDS NOMINATIONS SOUGHT

The Dayton Hamvention now is accepting nominations for its 2009 Radio Amateur of the Year, Special Achievement, and Technical Excellence awards. The Radio Amateur of the Year Award is presented to an individual who has made a long-term, outstanding commitment to the advancement of Amateur Radio. The Technical Excellence Award is for the person who has made an outstanding technical advancement in the field of Amateur Radio. The Special Achievement Award honors someone who has made an outstanding contribution to the advancement of Amateur Radio by spearheading at least one significant project.

All amateur radio operators are eligible. The Hamvention Awards Committee makes the decision on all awards based in part upon the information it receives and not on the number of nominations submitted for a given individual. Documentation that informs the Awards Committee of a candidate's accomplishments may include magazine articles, newsletters, newspaper clippings, and even videos. These materials become the property of Hamvention and cannot not be returned.

The deadline for nominations is February 18, 2009 with the winners recognized nest May at the Hamvention. Additional details on these awards and a nomination form are available on the Dayton Hamvention Web site at www.hamvention.org. Nominations also are accepted via U-S mail to Dayton Hamvention Awards, PO Box 964, Dayton, Ohio, 45401. (DARA)

OLD TIME RADIO: THE CHICAGO WLS STORY BY W9CHI

Scott Childers, W9CHI, has authored a new book titled Chicago's WLS Radio. Childers tome is an illustrated history of the station known as the windy city's Big 89. It takes you from the stations inception in the 1920's by Sears Roebuck in all the way to last year's Big 89 Rewind special. W9CHI tells Newsline that it was a book that he wanted to do:

--

W9CHI audio here. Talks about the eay the station connects with its audience. Hear it in the MO3 version of this newscast downloadable at www.arnewsline.org

--

Many well-known celebrities, like Gene Autry, owe their careers to the Big 89, through the famous Saturday night program The National Barn Dance. And some rather famous air personalities such as Dick Biondi, Larry Lujack, and John Records Landecker became household names thanks to the stations incredible influence on the Chicago broadcast scene.

Chicago's WLS Radio is part of the Images Of America series by Arcadia Press. More information is at W9CHI's website at WLS History dot com. (ARNewsline")

**

OLD TIME RADIO: W9CHI ON THE RAIN REPORT

Also, you can learn more about Scott Childers, W9CHI, and his book on W-L-S over the next two weeks on the Chicago-based RAIN Report. You can hear it over the phone at 773-358-7845 or on-line at www dot therainreport dot com. And therainreport is spelled as one word. (RAIN)

**

EMERGING TECHNOLOGY: KGO RADIO GOES GREEN

San Francisco station KGO AM says that it has gone partially green. According to its website, on October 30th KGO became the first major commercial broadcast media outlet in California to reach its listeners by harnessing the power of the sun to reduce its dependence on the regions power system.

The KGO solar energy program began last winter. The now completed solar panel installation is located at the stations transmitter site near San Francisco's Dumbarton Bridge. Not only does it reduce KGO's daily load on the power grid, but it will serve as an ongoing test facility for emerging solar technology. You can see the construction of the solar power system as it progressed from 2008 to now http://dynamic.kgoradio.com/solar.php. (RW)

HAM RADIO IN SPACE: LEONID METEOR STORM A HAM RADIO SUCCESS

This years Leonid meteor shower peaked on November 17th and 18th much to the delight of weak signal scatter enthusiasts world-wide. Peak rates of 20 to 100 meteors had been anticipated during the early hours of the 17th and again during the waning hours of the 18th at around 21:30 UTC.

While the rather bright moonlight probably spoil the show for star gazers, ham were reportedly thrilled with the pings, hits and QSO'sthey had during the storm. This, by bouncing their signals off the ionized trails of meteors burning up in the Earths atmosphere.

Researchers who study the comet Tempel-Tuttle say that it is the source of the annual Leonid meteor swarm. (VHF Reflector)

WORLDBEAT - HOLLAND: RADIO NETHERLANDS GLOBAL PANEL WANTS YOU

Hams tend have strong opinions on world events and issues. If you are one who does then Radio Netherlands Worldwide may have something to interest you.

According to Media Network, the station is looking for people to join its Global Panel in English. If you join you will be regularly invited to give your opinion about current topics. The results of the surveys will be published on the Radio Netherlands Web site and will be used in the programs of Radio Netherlands Worldwide.

If you're interested, go to www dot globalpanel.nl to sign up. (Media Network)

**

WORLDBEAT - UK: CELEBRATING THE LIFE OF LOUIS BRAILLE

On the air, listen out for GM3WUX will be operating GB2HLB, from December 26th of this year through January 22nd 2009. This, to celebrate the bicentenary of the birth of inventor Louis Braille whose tactile language for the sightless has been adapted world-wide.

In dedication to the Braille bicentenary each QSO made by GB2HLB will receive a special QSL card depicting Braille and raising awareness of the the United Kingdom's Royal National Institute of Blind People. A fund raising web page for the group can be found at www.justgiving.com/louisbraille. (GB2RS)

**

WORLDBEAT - INDIA: INDIA'S HAMS CELEBRATE BOSE

Be on the lookout for several stations in India to sign with the AU2 prefix between now and December 8th. This, to commemorate the 150th anniversary of the birth of Sir Jagadeesh Chandra Bose. That nation considers Bose as the father of radio communications in India. (E-mail)

**.

ON THE AIR: COMMEMORATING THE ARECIBO OBSERVATORY

Operation of special event station KP4AO commemorating Puerto Rico's Arecibo Observatory's 45th anniversary has been postponed to Sunday, November 23rd. This due to Angel Vazquez, WP3R, involvement in this past weekend's ARRL SSB Sweepstakes. The Arecibo operation will be on 20 meter SSB only. It will run from 1300 to 2000 UTC and those that make contact with KP4AO will receive a certificate via W3HNK. (WP3GW)

**

DX

In DX, word that G3RWF is in Kenya through November 24th using the callsign 5Z4LS. Between November 25th and December 2nd he will be in Uganda as 5X1NH. QSL via his home call.

5R8IC will be active from Ile Sainte Marie, Madagascar through the 14th of December. His operation is CW only on 30 through 10 meters. QSL direct to F6ICX.

ON4JM will be on the air portable O-D-5 until the end of December. He in Lebanon working with the United Nations. QSL to his home call.

And listen out for OP0DL on from Patriot Hills in Antarctica until around December 25th. He's there on work a assignment and on the air as time permits. QSL vis ON5XX.

Lastly, DJ4SO will be on the air portable V 5 in Namibia until December 4th. His activity will be mostly on CW, RTTY and PSK31. He will be on 160 through 10 meters. QSL as directed on the air.

(Above DX news from RSGB and various other DX news sources.)

**

THAT FINAL ITEM: THE BOOBY-TRAP REPEATER JAMMER

And finally this week, the rather bizarre video showing the discovery of a repeater jamming device with a booby-trap attached. That's the story from the United Kingdom told in an item that first aired on ITV news and is now posted to a video sharing website. Amateur Radio Newsline's Jim Meachen, ZL2BHF, has the rest of this rather strange tale now coming to the attention of hams world wide:

--

The accidental find of the booby trapped jamming unit apparently took place in the United Kingdom in late 2007. According to an early 2008 report by Erika Barnes of ITV News and only recently discovered on the YouTube dot com video website, the device was accidentally discovered in Buckinghamshere by the caretaker of the property.

Mike Harrison is the manager of Wolton Estate. Thats a tiny in-land island in Englands south end. He told Barnes that in the course of his regular duties that he unearthed some top soil and found a white box. He was suspicious and decided to not go near it. After turning it over using a long stick he noticed a battery attached to something that he suspected

might be an explosive and decided to back away.

Authorities found it to be a radio jamming device intended to interfere with ham radio relay communications to a repeater located on a tower near a location known as Brill. Authorities say that the device was also designed harm and possibly kill anyone who might have found it and try to turn it off. Thankfully for Harrison he moved it with the stick and even more thankfully the device failed to detonate.

At the time the report aired that there was at least one more jamming device in the area. The ITV story warned that anyone who might find it to not tamper with it. Instead, that they should notify the local police. No word if it was ever located and disarmed.

For the Amateur Radio Newsline, I'm Jim Meachen, ZL2BHF.

--

Talk about carrying repeater jamming to a new low. As far as we have been able to determine, the person or persons who planted the booby trapped jamming devices is still at large. You cam see the story yourself at www.youtube.com/watch?v=OT11HFigbxk&feature=related (ARNewsline")

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline". Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's" only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline", P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Carlson, KQ6FM, saying 73 from Reno, Nevada, and we thank you for listening.

==> ARRL DELTA DIVISION GETS NEW LEADERSHIP; GREAT LAKES DIVISION REMAINS UNCHANGED

On Friday, November 21, ARRL staff members started opening ballots for the Director and Vice Director races in the Delta Division and the Vice Director race in the Great Lakes Division. ARRL Chief Financial Officer Barry Shelley, N1VXY; Dakota Division Director Jay Bellows, W0QB;

Southeastern Division Director Greg Sarratt, W4OZK, and a representative from an independent auditor looked on; Sarratt is also a member of the League's Ethics and Elections Committee. After all the ballots were counted, the Delta Division gained a new Director and Vice Director, while hams in the Great Lakes Division voted to keep their Vice Director. The leadership team in the Atlantic, Dakota and Midwest Divisions will remain the same. Terms for Directors and Vice Directors begin at noon on January 1, 2009 and run for three years.

The following ran unopposed and were declared the winner of their elections by the League's Ethics and Elections Committee: Atlantic Division Director Bill Edgar, N3LLR, and Vice Director Tom Abernethy, W3TOM; Dakota Division Director Jay Bellows, K0QB, and Vice Director Greg Widin, K0GW; Midwest Division Director Bruce Frahm, K0BJ, and Vice Director Cliff Ahrens, K0CA; and Great Lakes Division Director Jim Weaver, K8JE. The rules state that if a candidate is running unopposed, he or she shall be declared the winner without balloting.

Incumbent ARRL Delta Division Director -- Henry Leggette, WD4Q, of Memphis, Tennessee -- did not seek re-election this term. Two candidates, current Vice Director Karl Bullock, WA5TMC, of Ripley, Mississippi, and former Louisiana Section Manager Mickey Cox, K5MC, of West Monroe, were nominated for this seat. With 1148 votes, Cox was declared the new Delta Division Director; Bullock received 993 votes.

With Bullock seeking the Director position, this left the Vice Director position open, with Ariel Elam, K4AAL, of Antioch, Tennessee, and Arkansas Section Manager David Norris, K5UZ, of Batesville, in the hunt for this post. Norris won the seat with 1399 votes, Elam received 746 votes.

Three people were nominated for the position of Vice Director in the Great Lakes Division: Incumbent Gary Johnston, KI4LA, of Edgewood, Kentucky; former Kentucky Section Manager John Meyers, NB4K, of Butler, and Michigan Section Affiliated Club Coordinator Daniel Romanchik, KB6NU, of Ann Arbor. Johnston will keep his seat, as he garnered 1218 votes in a very close race. Myers received 1205 votes and Romanchik received 1155 votes.

"I'm happy to be a part of this election process," said Sarratt. "I would like to thank everyone for running and also thank the ARRL members in the Delta and Great Lakes Division who participated. The big turnout shows the high level of interest our members have in Amateur Radio."

"It is great to see such an interest on the part of members in this election," Bellows said. "These close races do indeed show that every vote counts and how very important it is to participate."

The next scheduled Division elections are next fall for the Central, Hudson, New England, Northwestern and Roanoke ARRL Divisions. In accordance with League's Bylaws <http://www.arrl.org/aabl.html>, ballots will be counted on November 20, 2009.

==> SECTION MANAGER ELECTION RESULTS ANNOUNCED

There were nine Section Manager races this fall, four of which saw no opposition. Election ballots were counted and verified on Tuesday, November 18 at ARRL Headquarters for the remaining five races. Terms of office for these new Section Managers will begin on January 1, 2009.

In Nebraska, Art Zygielbaum, K0AIZ, defeated two other candidates in a very close race, receiving 124 votes. Opponents Jeff Beiermann, WB0M, of Omaha, received 118 votes while incumbent Section Manager Matthew Anderson, KA0BOJ, of Ashland, received 74 votes. Zygielbaum, who lives in Lincoln, was first licensed in 1961; he is presently vice president of the Lincoln Amateur Radio Club. He is active in emergency and public service communications, contesting, DXing, satellite, digital modes and QRP operation.

Incumbent New York City/Long Island Section Manager Tom Carrubba, KA2D, of West Babylon, decided not to run for another term, so two other hams stepped up to run for the position: Mike Lisenco, N2YBB, of Brooklyn, and Robert Biamonte, WB2OMW, of Levittown. Lisenco was declared the winner with 468 votes; Biamonte received 134 votes. Lisenco presently serves as Assistant Section Manager and Section Emergency Coordinator. Prior to those appointments, he was the District Emergency Coordinator for New York City. Lisenco is an avid DXer and contester and has previously served as vice president of the Kings County Radio Club.

In the Eastern Massachusetts election, Mike Neilsen, W1MPN, of Hudson, defeated incumbent Section Manager Art Greenberg, K1GBX, of Georgetown. Neilsen received 660 votes to Greenberg's 224. Neilsen served as Eastern Massachusetts Section Manager from January 2005-December 2006. Just prior to his first term as Section Manager, he served as the Section Emergency Coordinator for the Section from September 2001-January 2005.

Section Manager of the Southern New Jersey Section since 1997, Jean Priestley, KA2YKN, of Pennsauken, decided not to run for another term of office. George Strayline, N3GZ, of Villas, and Rick Stoneking, W2RDS, of Lumberton, sought the post. With 236 votes, Strayline was declared the winner; Stoneking received 209 votes. Strayline is a founding member of the Jersey Cape D-Star User Group (JCDUG). He is also a member of the Cape May County Amateur Radio Club and an active ARRL Accredited Volunteer Examiner and Official Observer. He enjoys high speed CW, DX and home brewing.

Indiana will also have a new Section Manager starting in January, since incumbent Section Manager Jim Sellers, K9ZBM, of Middlebury, decided not to run for another term. Sellers has served as Section Manager since July 2002. Raymond Andrews, K9DUR, of West Terre Haute, and John Poindexter, W3ML, of Knox, were candidates for the open seat. Andrews received 531 votes and Poindexter received 261 votes.

After ballots had already been mailed out to ARRL members in the Indiana Section, Andrews wrote to ARRL Headquarters withdrawing his candidacy due to health concerns. As such, the Section Manager's position for the

new term starting in January was considered vacant because Andrews won the majority of votes.

According to the Rules and Regulations of the Field Organization, vacancies in the office of Section Manager shall be filled by appointment by the ARRL Membership and Volunteer Programs Manager, in consultation with the respective Section's Director. After ARRL MVP Manager Dave Patton, NN1N, consulted with ARRL Central Division Director Dick Isely, W9GIG, John Poindexter, W3ML, was appointed Indiana Section Manager with a term to begin January 1, 2009. Poindexter's term of office will be for 18 months -- instead of two years -- because this new term of office in Indiana had to be resolicited.

Poindexter has been a radio amateur since 1979 and has held appointments as an Assistant Emergency Coordinator and has served as president of the Wabash Valley Amateur Radio Club and the Starke County Amateur Radio Club. He is active in public service communications, DXing and contesting.

The following incumbent ARRL Section Managers did not face opposition and were declared elected for their next terms of office starting January 1, 2009: Dale Bagley, K0KY (Missouri); Jim Boehner, N2ZZ (South Carolina); Dee Turner, N4GD (West Central Florida), and John Rodgers, N3MSE (Western Pennsylvania).

Since there were no Section Manager nominations received for the next term of office in Northern New York, nominations will be resolicited in the January 2009 issue of QST.

==> WEATHER SPOTTERS RECEIVE AWARD AS SEVERE WEATHER COMES CALLING

On November 15, Amateur Radio operators who serve the National Weather Service in Taunton, Massachusetts received an award from the NWS weather forecasters citing excellence in service and "tireless service" to the NWS and to the people of Southern New England. Presented at a SKYWARN coordinators meeting, the award was accepted by Rob Macedo, KD1CY, on behalf of the more than 24 hams present. Macedo is the ARES SKYWARN Coordinator for the NWS's Taunton office and is the ARRL Eastern Massachusetts Section Emergency Coordinator.

The award reads: "Presented to NWS-Taunton Amateur Radio Team WX1BOX. With sincere appreciation for your long-standing commitment to the National Weather Service and the people of southern New England and with particular recognition for your tireless support during the unusual 2008 severe weather season."

Members of the Taunton SKYWARN Amateur Radio Club, WX1BOX, assist forecasters at the Taunton office. This office serves portions of Massachusetts, Connecticut, Rhode Island and New Hampshire. NWS Taunton forecasters Bob Thompson, Glenn Field, Bill Babcock and Eleanor Vallier-Talbot presented the award to the group.

"Today was a special meeting," Macedo said. "I wasn't expecting the trophy that's sitting on top of the power supply here at the station. I was surprised. Very well done, I must say. It is a tribute to the team effort exhibited by Amateur Radio operators and SKYWARN spotters across the four-state region."

Macedo said that the award meant "even more to the Amateur Radio team since it was funded not by NOAA, but rather by the forecasters at the station. They paid for it out of their own pockets."

According to Macedo, the 2008 summer severe weather season in Southern New England featured 974 local storm reports. Of those, 917 -- or 94 percent -- came from the Amateur Radio SKYWARN Spotter Network. There were a total of 50 SKYWARN activations recorded over the summer of 2008. "This has been the most active year in the 13 years I've been involved in the SKYWARN program. We hope next year will be calmer in terms of severe weather," Macedo said.

Later that evening, the NWS posted a tornado watch for much of Southern New England, lasting until 2 AM Sunday. Strong winds ahead of a cold front resulted in pockets of tree and power line damage across Connecticut, Rhode Island and Massachusetts. Some minor structural damage was also reported, as wind gusts of 50-70 MPH were reported; a wind gust of 67 MPH was recorded at the Blue Hill Observatory in Milton, Massachusetts.

"While the line of severe thunderstorms that were capable of damaging winds and the possibility of tornadoes fell apart as it moved toward the region, strong straightline winds out ahead of the storm were the story of the event. This resulted in pockets of wind damage across the region, including several reports of trees falling on cars and homes. A couple of weakened roofs on old structures were blown off due to the strong winds in Boston, Massachusetts and Providence, Rhode Island," Macedo said. "Somehow, given such an active year in 2008 for severe weather, it is no surprise that we had a wind damage event on the evening of our coordinators' meeting. We hope this is the end of the active stretch."

==> LEONARD AWARD NOMINATIONS DUE DECEMBER 8

Here's your chance to say "thank you" to the reporter who released the best stories about Amateur Radio between December 3, 2007 and December 8, 2008 -- nominate them for the Leonard Award! This annual ARRL award honors a professional journalist whose outstanding coverage in TV, radio, print or multimedia best reflects the enjoyment, importance and public service value of Amateur Radio.

Nominations are judged by members of the League's PR Committee; the final decision is made during the ARRL Board meeting in January. The winner receives an engraved plaque and a cash award of $500. The Leonard Award was created as a tribute to the late CBS News President Bill Leonard, W2SKE. He was an avid Amateur Radio operator, and most active on the air during the 1960s and 1970s.

The recipient will receive the award based on a print story, photo essay, audio or video (including broadcast) or multimedia presentation that covers the topic of Amateur Radio. The scope of the work nominated may be a single story or series in a commercially published book, a recognized general-circulation (non-trade) daily or weekly newspaper, a general or special-interest magazine (except publications predominantly about Amateur Radio), a commercial or public radio or television broadcast, a Web site operated by a generally recognized journalistic organization (such as a newspaper, magazine, broadcast station or network) or multimedia format (a CD-ROM, for example). The story must be truthful, clear and accurate, reflecting high journalistic standards.

Only one submission per entrant will be accepted; a group award will count as a single entry. Nomination packets must include a complete application plus appropriate work sample:
* Print article: Submit original tear sheets plus one photocopy on 8.5 x 11 inch paper. If there are multiple pages, write the author's name on the back of each sheet.
* Radio: Submit one copy of script on 8.5 x 11 paper plus one standard audio CD or MP3 file.
* Television: Submit one copy of script on 8.5 x 11 paper plus one DVD or MP4 file.
* Multimedia: Submit a photocopy of each screen or Web page and/or CD ROM or DVD diskette(s) as appropriate.

For more information, please see page 62 of the November 2008 issue of QST or contact ARRL Media and Public Relations Manager Allen Pitts, W1AGP <w1agp@arrl.org>. Pitts advises that some news organizations prohibit journalists from entering contests that offer monetary awards, so check with your potential nominee ahead of time.

==> NEW BASIC ANTENNA BOOK AVAILABLE FROM ARRL

For something that is often so simple to make, an antenna is remarkably difficult for many people to understand. The antenna is one of your shack's most important elements and can make your radio system a success. Now available from ARRL, "Basic Antennas: Understanding Practical Antennas and Design" <http://www.arrl.org/catalog/?item=9994> is a comprehensive introduction to antennas -- basic concepts, practical designs and details of easy-to-build antennas. You'll learn how to make antennas that really work. This book will provide a foundation in antenna theory and design necessary for anyone undertaking more advanced topics and projects such as those presented in "The ARRL Antenna Book" <http://www.arrl.org/catalog/?item=9876>.

Written by ARRL Technical Editor Joel Hallas, W1ZR, this new book includes an introduction to antennas, as well as sections on dipole antennas, antenna impedance, transmission lines, practical two element arrays, wideband and multiband antennas, monopole antennas, reflector antennas, Yagis for HF and VHF loop antennas, antennas for microwave applications, vehicle antennas, antenna measurements and an introduction to antenna modeling

"Most people involved in the radio arts come from a background in the circuitry required to define radio equipment," Hallas said, "and many have difficulty making the transition to the electromagnetic side of radio. 'Basic Antennas' is intended to assist those with a basic knowledge of radio technology in making that important leap from the circuit domain to the antenna domain." Hallas said the technology presented in the book is developed using the "minimum of mathematical concepts to allow introduction of basic principles in an easy to read manner." Upon completion of this book, readers should have enough understanding of the basic principles of antenna systems to be able to make decisions about selecting antennas for their applications or using more advanced antenna materials properly.

Joel Hallas, W1ZR, earned his BS and MS degrees in electrical engineering. He has been a radar and telecommunications systems engineer, engineering manager, telecommunications executive and college teacher. Now QST Technical Editor, he is also the author of "Basic Radio -- Understanding the Key Building Blocks" <http://www.arrl.org/catalog/?item=9558>.

==> GLOBAL EMERGENCY NETWORK MARKS RECORD

The Global ALE High Frequency Network (HFN) <http://hflink.net/> -- an international Amateur Radio Service organization of ham operators dedicated to emergency/relief radio communications -- has become the first network to operate continuously for more than 500 days on all international Amateur Radio shortwave bands simultaneously.

According to HFN International ALE Coordinator Bonnie Crystal, KQ6XA, the main purpose of the Network is to provide efficient emergency and disaster relief communications to remote areas of the world. "Beginning with a core group of six North American radio operators in June 2007, HFN rapidly expanded to cover large areas of the planet with 24/7 digital communications," she said."HFN was designed to be an open framework for global Amateur Radio emergency services to interoperate on HF using the Automatic Link Establishment (ALE) system." <http://www.arrl.org/tis/info/ale.html>

Relying on ionospheric radio communications, interconnected HFN base stations scan the radio bands every 10 seconds, from 3.5 MHz-28.0 MHz. Through this Net, Crystal said, ham operators stay connected with each other at all hours of the day or night in any mode of operation, and can send Internet e-mail or cell phone mobile text messages from the field.

==>SOLAR UPDATE

Tad "The Sun and moon get crossed, but they never touch" Cook, K7RA, this week reports: The latest sunspot appearance lasted eight days; the spot passed from view after Monday, November 17. Geomagnetic indices have remained nice and quiet. If you look here for recent geomagnetic data <http://www.swpc.noaa.gov/ftpdir/indices/quar_DGD.txt>, you will notice certain times which were extremely quiet with many zeroes in the K index. One of those periods is the days after November 16. You won't

see quiet conditions like this once we get greater solar activity. The next time we see unsettled geomagnetic conditions should be November 25. Sunspot numbers for November 13-19 were 16, 12, 11, 11, 11, 0 and 0 with a mean of 8.7. The 10.7 cm flux was 69.1, 68.3, 68.2, 67.7, 67.7, 69.8 and 69.4 with a mean of 68.6. The estimated planetary A indices were 1, 1, 6, 8, 2, 1 and 1 with a mean of 2.9. The estimated mid-latitude A indices were 2, 1, 3, 7, 2, 0 and 1 with a mean of 2.3. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Robert Frost's "On Looking Up by Chance at the Constellations" <http://www.poeticportal.net/content/view/775/29/>.

==>IN BRIEF:

* This Week on the Radio: This week, the YO International PSK31 Contest is November 21. The LZ DX Contest is November 22-23. The SKCC Sprint and the RSGB 80 Meter Club Sprint (CW) are both on November 26. Next week, look for the CQ Worldwide DX Contest (CW) on November 29- 30 and the ARCI Topband Sprint on December 4. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, December 7, 2008, for these online course sessions beginning on Friday, December 19, 2008: Amateur Radio Emergency Communications Level 2; Antenna Modeling; HF Digital Communications; and Radio Frequency Propagation. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cep@arrl.org>.

* ARRL HQ to Close for Thanksgiving: ARRL Headquarters will be closed Thursday, November 27 and Friday, November 28 in observance of Thanksgiving. There will be no W1AW bulletins or code practice transmissions those days. The ARRL Letter will be distributed on Wednesday, November 26, but there will be no ARRL Audio News on Friday, November 28. ARRL Headquarters will reopen Monday, December 1 at 8 AM Eastern Standard Time. We wish everyone a safe and bountiful Thanksgiving holiday.

* Canadian Amateurs Receive Limited 500 kHz Privileges: On November 10, Radio Amateurs of Canada (RAC) announced that Industry Canada, which regulates Amateur Radio in that country, has accepted an RAC proposal for selected Canadian radio amateurs to operate in the vicinity of 500 kHz. The proposal states that RAC would recommend amateurs who would be licensed to operate in the 504-509 kHz band with a maximum power of 20 W ERP and bandwidth up to 1 kHz. Stations operating in this band would be technically operating under Special Developmental Licenses, although they would all be radio amateurs. Distinct call signs would be used and the licenses would be renewable on an annual basis, subject to the amateur demonstrating the research he has carried out. According to the RAC, these amateur operations would support Canada's efforts to place a proposal on the agenda of the 2011 World Radio Conference (WRC-11), which, if adopted, would create an amateur allocation in the 600 meter band. The US, under the auspices of the ARRL's 500 kHz Experimental Station, WD2XSH, is also conducting research in this band. Canada is the eighth country to do experimentation on 55 kHz; along with the US and Canada, Great Britain, Germany, Sweden, Czech Republic, the Netherlands and Romania are also participating. More information on the Canadian proposal will be posted to the RAC Web site as it becomes available.

* Tom Jednacz, W7QF (SK): Thomas C. Jednacz, W7QF, of Dunnellon, Florida, passed away November 17 from complications from lupus. He was 68. An ARRL member and an avid DXer and contester, Jednacz founded the Amateur Radio Lighthouse Society (ARLS) with Jim Weidner, K2JXW, in 2000 <http://www.arlhs.com/>. The purposes of the ARLHS are to promote public awareness of ham radio and lighthouses, to preserve lights that are in danger of extinction and to pay tribute to the role that hams and lighthouse keepers have played in contributing to maritime safety. Professionally, Jednacz was a vice president of an engineering division at Philips Electronics and a member of IEEE. While at Philips, he was on a team credited with the invention of a building management system utilizing packet hopping communication.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news

updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

==> ARRL PRESIDENT EMERITUS GEORGE WILSON, W4OYI (SK)

George S. Wilson III, W4OYI, of Owensboro, Kentucky, passed away at his home on November 25. He was 76. Wilson served as the ARRL's 11th President from January 1992-July 1995. He resigned from the position after a stroke in 1995. Wilson's tenure in ARRL leadership included positions as Kentucky Section Emergency Coordinator, Kentucky Section Communications Manager, Vice Director and Director of the Great Lakes Division, as well as Vice President and First Vice President, eventually culminating in the position of ARRL President. Upon retirement from the League's top position, Wilson was named President Emeritus based on his lifelong commitment to Amateur Radio and the League -- one of only four people granted this honor. He also served as an Assistant Director in the Great Lakes Division.

After his stroke, which left him completely paralyzed on his left side, Wilson stepped down after serving just over three years in the League's top volunteer position. He told the ARRL Board of Directors that while he felt had made progress in rehabilitation, his medical condition

prevented him from travelling and from devoting the energy required to perform the demanding duties of the office. He expressed his appreciation to the members of the Board for the opportunity to serve.

Wilson told the Board's July 1995 meeting that "The League has my undying love and support." To honor Wilson's service to the ARRL and to Amateur Radio as a whole, the Board named him ARRL President Emeritus. His legacy includes a near lifelong involvement in the League's emergency and public service communications programs. He remained active in public service and emergency communication until his death.

Then-ARRL First Vice President Rod Stafford, W6ROD (ex KB6ZV), moved up to fill Wilson's shoes. Upon taking the position, Stafford said that Wilson "believe[d] in team building, in getting people involved and keeping them informed. That the ARRL was able to function so seamlessly while George was incapacitated is a testimony to his own management style."

According to ARRL Chief Executive Officer David Sumner, K1ZZ, Wilson suffered his stroke in February 1995 while on ARRL business in Washington, DC. "The stroke left George physically limited," Sumner said, "but he remained mentally active and stayed in touch with his friends, mainly by e-mail and some CW operating. The history of the ARRL is highlighted -- indeed, our history has been made possible -- by the extraordinary contributions of many volunteers. With George's death, we've lost one of the great ones."

"George was a personable individual who preferred to look at things from a simple perspective," said current ARRL President Joel Harrison, W5ZN. "When I attended my first ARRL Board meeting as a young 28 year old Director, George was elected Vice President. During time on the Board afterward, he provided me with some valuable experience that allowed me to be an effective Director working within the great democratic process that we benefit from. After he experienced his terrible medical situation while serving as ARRL President, he displayed great resilience in moving forward; Amateur Radio not only played a part in his recovery, but a major part of his life afterward. His involvement in Amateur Radio will be missed, but his impact will remain. It is a sad loss."

A lawyer by profession, Wilson, according to Sumner, "played the role of a simple small-town lawyer disarmingly well when he debated, right up to the point where he skewered his opponent with surgical precision. It was great fun to watch as long as you weren't the one being skewered!"

Ohio Section Manager Joe Phillips, K8QOE, fondly remembered Wilson, recalling a meeting he had with the ARRL President in the early 1990s: "I was seated at a table at the Findlay Hamfest in Ohio. I had ARRL President George Wilson, W4OYI, on one side of me and then-Great Lakes Division Director Al Severson, AB8P (SK) on the other. They were discussing problems within the ARRL. I was impressed at the depth of their concern for the future of the ARRL. Al left and George stayed behind; he gave me a quick lesson on ARRL service to the membership. He

taught me the meaning of constituency service to the membership when you wore an ARRL leadership badge. I had only recently been appointed Ohio Section Public Information Coordinator and I never gave membership service any real thought. George Wilson redirected my thinking that morning. He was a real giant in ARRL leadership, with his greatest accomplishment being an inspiration to others. He was particularly effective because he had that 'plain old guy' appearance, while working with a keen mind and impressive spirit. I will miss him."

In 2004, Wilson received the Special Achievement Award, sponsored by the Dayton Hamvention. Nominated by current ARRL Great Lakes Vice Director Gary Johnston, KI4LA; former ARRL First Vice President Steve Mendelsohn, W2ML, and Amateur Radio Newsline's Bill Pasternak, WA6ITF, they noted that Wilson "spent his entire ham radio career in devoted service to his community, to his country, to his hobby and in service with its only national representative body. He has given of himself because that's his nature."

Johnston, Mendelsohn and Pasternak said that "those of us close to George knew [that resigning as ARRL President] was not an easy decision for him to make, but one that he had to face. He had so many ideas and plans for making ham radio a hobby and service to be shared with the world. Yet he knew that his physical condition was such that he must devote his every waking moment to 'rehab' if he would at some later date again be able to contribute to the service that he loved so much."

The nomination continued: "When he took office [as ARRL President], George Wilson made it clear that he would do all he could to preserve our ham bands and make them more pleasant to operate. He has been at the forefront of efforts in both areas. The results can be seen in several areas of the hobby including the creation of the vanity call sign program and a major victory in retaining Amateur Radio access in the 902-928 MHz [33 cm] band."

His nomination recounted Wilson's beginnings as a radio amateur. Licensed at 16, Wilson took to 40 meters with a home-brew transmitter consisting of a 6L6 oscillator tube driving an 807 running about 30 W of power, a simple receiver and wire antenna. "His first exposure to the world of emergency service communications came [when he was only 17] in December 1949 when the Green River overflowed its banks and flooded the town of Calhoun [Kentucky]," the application stated. "As the emergency crystallized, relief workers found stranded residents calling in for evacuation. Ferry boats would go get them, only to have to turn around [and] go right back because the next door neighbor had since also requested evacuation. What was needed was communications between the relief agency in Owensboro and the boats involved in the rescues. As there were no cellular telephones, 2 meter [handheld transceivers] or repeaters in that era, George and his comrades installed CW rigs on the two ferries and one at the local courthouse to act as a 'dispatch.' The system worked flawlessly and made rescue of those stranded by the flooding more efficient. In reality, it most likely saved lives. The die

was cast and George Wilson, W4OYI, was hooked on public service."

In the years since his stroke, Wilson used a wheelchair, making travel to hamfests and conventions a bit difficult. As a result, his ham radio public service activities were limited to those he could do from or near his home. As such, Wilson devoted much of his time to monitoring the local repeater for those in need of assistance and was active in the Owensboro Amateur Radio Club and ARES.

In 2003, amateurs in the Great Lakes Division created the George S. Wilson Lifetime Achievement Award. This annual award is presented to a Division member who has "contributed greatly to the overall vitality of the Amateur Radio Service."

Wilson was a member of the ARRL's A-1 Operator Club <http://www.arrl.org/awards/a1-op/> and held DXCC (CW and Mixed) with 200 countries confirmed on each <http://www.arrl.org/awards/dxcc/>.

In addition to his wife Marian (of 51 years) and his children Berry and Jennifer, Wilson is also survived by two grandchildren, Meghan and Rachel. Visitation will take place Friday, November 28 from 2-7 PM at the James H. Davis Funeral Home in Owensboro; an online guestbook is available <http://davisfuneralhome.com/>. Services will be at 10 AM at the funeral home the following day. Wilson will be interred at Elmwood Cemetery, also in Owensboro. In lieu of flowers, the family requests that donations in Wilson's name be made to the American Red Cross.

==> IARU REGION 1 MEETS IN CROATIA

Earlier this month, IARY Region 1 held its triennial conference in Cavtat, Croatia. Forty IARU Member Societies were present, with another 12 Member Societies represented via proxy. IARU Vice President Tim Ellam, VE6SH, and IARU Secretary David Sumner, K1ZZ, also attended the conference <http://www.arrl.org/news/files/CT08_Cavtat_Final_plenary_minutes.pdf>.

Sunday, November 16, marked the opening of the five day conference that was hosted by. Hrvatski Radioamaterski Savez (HRS), Croatia's IARU Member Society <http://www.hamradio.hr/>. HRS President Kreso Kovarik, 9A5K, welcomed local and national officials and conferees. Kovarik said he was pleased that that the IARU chose to have the 2008 conference in Croatia, and expressed his view that this would be of great value to Croatia and to the HRS.

Ellam spoke next, relaying greetings from IARU President Larry Price, W4RA, who was unable to attend. Ellam took this opportunity to briefly review the work done by IARU over recent years and said he "looked forward to WRC 11." He thanked Region 1 and the HRS for their excellent organizational arrangements for the conference. Region 1 President Ole Garpestad, LA2RR, echoed Ellam's good wishes and noted that there were 50 delegations present for this conference, either in person or by proxy.

The conference was formally opened by Kreso Antonovic, Director of Electronic Communications and Postal Service Directorate, Ministry of Sea, Transport and Infrastructure, Croatia. A postage stamp commemorating the conference was unveiled at a recption for heads of delegations and invited guests that followed.

One of the highlights of the conference was the election of new officers. With 41 out of 49 votes cast, Hans Blondeel Timmerman, PB2T, of the Netherlands, was elected President. Mustapha Diop, 6W1KI, of Senegal, was unanimously elected Vice President. Dennis Green, ZS4BS, of South Africa, was elected Secretary and Andreas Thiemann, HB9JOE, of Switzerland, was elected Treasurer. Rounding out the Region 1 Executive Committee are Hani Raad, OD5TE, of Lebanon; Betty Magnon, F6IOC, of France; Nikola Percin, 9A5W, of Croatia; Panayot Danev, LZ1US, of Bulgaria, and Colin Thomas, G3PSM, of Great Britain.

In preparation for the expansion of 40 meters in Region 1 on March 29, 2009, the HF Committee debated a band plan to incorporate the change from 7.000-7.100 to 7.000-7.200 MHz. The conference adopeted the following plan:
* 7.000-7.025 MHz, CW, contest preferred (200 Hz maximum bandwidth)
* 7.025-7.040 MHz, CQ, QRP Center of Activity to be 7.030 MHz (200 Hz maximum bandwidth)
* 7.040-7.047 MHz, Narrow band modes (digimodes) (500 Hz maximum bandwidth)
* 7.047-7.050 MHz, Narrow band modes (digimodes, unattended automatically controlled data stations) (500 Hz maximum bandwidth)
* 7.050-7.053 MHz, All modes (digimodes, unattended automatically controlled data stations) (2700 Hz maximum bandwidth)
* 7.053-7.060 MHz, All modes (digimodes) (2700 Hz maximum bandwidth)
* 7.060-7.100 MHz, All modes, digital voice 7070, SSB QRP Center of Activity to be 7.090 MHz, SSB contest preferred (2700 Hz maximum bandwidth)
* 7.100-7.130 MHz, All modes, Region 1 Center of Activity to be 7.110 MHz (2700 Hz maximum bandwidth)
* 7.130-7.200 MHz, All modes, SSB contest preferred, Image Center of Activity to be 7.165 MHz (2700 Hz maximum bandwidth)
* 7.175-7.200 MHz, All modes, priority for intercontinental operation (2700 Hz maximum bandwidth)

The conference had an eye to both new and young radio amateurs. Delegates agreed unanimously to recommend to Member Societies the importance of the annual Jamboree on the Air and encouraged the organizations to assist Scouts with the event. By doing so, the delegates said, this will promote Amateur Radio to Scouts to where they will get their Amateur Radio license and become active on the air.

The delegates also recommended that an additional category be introduced to Amateur Radio contests "wherever possible." Details for the "Youngsters and Newcomers" category will be left to individual contest organizers to develop. Delegates also encouraged contest organizers to replace signal strength reports required in contests with "some other

less predictable exchange, so as to enhance the skill requirements of contest operators."

Delegates had three choices for the next conference: South Africa, Spain or England. Sun City, South Africa was chosen as the venue for the 2011 meeting.

==> DATES SET FOR DXPEDITION TO DESECHEO ISLAND

The US Fish and Wildlife Service (USFWS) has notified a group of hams led by veteran DXpeditioners Bob Allphin, K4UEE, and Glenn Johnson, W0GJ, that they will be able to mount a DXpedition to Desecheo Island (KP5, IOTA NA-095), February 12-26, 2009 <http://www.kp5.us/>. Desecheo currently sits at number 7 on the Most Wanted list, kept by "DX Magazine." Desecheo is a small uninhabited island in the Mona Passage, 14 miles off the western coast of Puerto Rico. It is part of the USFWS's national wildlife refuge system administered by the Caribbean National Wildlife Refuge Complex (CNWR).

Per USFWS rules, only 15 operators will be allowed on the island at one time. "We have arranged with USFWS to allow a shift change about half way through the DXpedition," Allphin told the ARRL. "This has allowed a number of hams on our waiting list an opportunity to participate in this DXpedition."

Johnson said the team will be running CW, SSB and RTTY on 160-6 meters. "We've had tremendous support from DX organizations all over the world and from numerous equipment and antenna manufacturers," he told the ARRL. "We are diligently working on the propagation studies to reach our hard to work areas of Asia and Europe. This and with our planned antennas, we should knock Desecheo off of the Most Wanted List for a long time to come." Desecheo is the second most-wanted DXCC entity in Asia and third most-wanted in Europe.

According to DXCC Manager Bill Moore, NC1L, the lack of amateur activity on Desecheo is due to the USFWS not issuing the needed Special Use permits. "The USFWS has always claimed safety concerns as a reason to not issue the permits," he said. "Since the island was used as a bombing range, there is the possibility that unexploded, live munitions are still on the island. It is always a good thing when an entity that had activation difficulties in the past gets on the air again."

On Friday, December 19, three DXpedition team members, USFWS personnel and an unexploded ordnance (UXO) expert will go out to Desecheo to sweep and clear the assigned area of unexploded ordnance and other hazards. "We are uniquely fortunate for a 'sneak preview' of our operating site the week before Christmas," Johnson said. "We will spend a day on Desecheo clearing hazards from our operating sites. Rarely does such a most-wanted entity have an opportunity for a sneak peak to optimally plan logistics, stations and antennas." There will be no radio operations on this trip.

The KP5 DXpedition team will assemble in Puerto Rico on Sunday, February 8 for mandatory UXO training. They will spend the next few days training, preparing and staging the several tons of equipment for transport to the site and set out for Desecheo on February 12. Allphin said that as soon as they land on Desecheo, two stations will be "immediately activated. Stations will continue to operate until the final moments of departure on February 26."

Allphin is an experienced DXer, having visited 80 DXCC entities and operated from 40, including Peter I Island, Howland Island, Kingman Reef, the South Sandwich Islands and South Georgia Island. Allphin and Johnson have both participated in DXpeditions to Heard Island and Bhutan.

"For a team leader, the challenges are pretty much the same for Desecheo as they were for Peter I and other remote DXpeditions," Allphin told the ARRL. "Take logistics -- you still must make sure everything you need gets there. Although there is a Radio Shack 20 miles away, the boat trip is $1000! The team must be selected on compatibility, experience and operating skills; that never changes. The difference this time is that Glenn and I have been inundated with requests to join the team. The close proximity makes it look like an easy DXpedition, I guess!"

ARRL Membership and Volunteer Programs Manager and experienced DXpeditioner Dave Patton, NN1N, said that both Desecheo and Navassa Islands (currently third on DX Magazine's Most Wanted list) saw frequent operations in the late 1970s through late '80s, but operations from the islands have been very limited since then. With the islands under the control of the US Fish and Wildlife Service, combined with decaying "infrastructure" on Navassa, there are more issues that must be dealt with than there were 25 years ago.

"A well-organized and lengthy operation from Desecheo will be a nice treat for the world's DXers," Patton said. "With W0GJ and K4UEE leading the operation, I think we can all count on a first class effort that will give maximum exposure to Asia/Oceania and Europe where KP5 is most needed. I also think that Glenn and Bob can demonstrate to the Fish and Wildlife Service that a DXpedition can take place and not damage the environment or cause big problems amongst other hams or for other agencies. I hope hams will be invited back to Desecheo more frequently in the future and expand the places where hams may operate."

In 1979, upon the recommendation of the DX Advisory Committee, Desecheo Island was added to the DXCC list for contacts made after March 1 of that year. KP4AM/D -- with operators N4EA, KP4Q, N4ZC, KP4DSD, KV4KV (now KP2A) and KP4AM (now W4DN) -- made the first DXpedition to Desecheo in March 1979. Various groups have made their way to Desecheo since the first trip, but other than a brief operation in December 2005, there has been no activity from the island since 1994. "It is so exciting that our DXpedition to Desecheo coincides almost exactly 30 years to the day of the first operation from Desecheo," Johnson told the ARRL.

In June of this year, CNWR invited written proposals from hams who had previously made inquiries about an Amateur Radio operation from Desecheo; CNWR indicated that they would allow one group to activate the island. After reviewing the proposals, CNWR would then select a group and prepare to issue a Special Permit to the successful party, limiting the group to no more than 15 people staying no longer than 14 days. Applicants had 45 days to prepare and submit their proposals. According to Allphin, seven groups submitted proposals.

"A panel of three Fish and Wildlife Service employees, from areas within the Service outside of the Caribbean refuge, spent September 24 and 25 reviewing and evaluating the [seven] proposals," Allphin said. "The selection criteria used were those outlined in the proposal invitation letter and points were awarded for how well criteria were addressed for thoroughness and documentation."

"It was truly an honor to have our proposal and team selected from the stiff competition," Johnson told the ARRL. "This has been a true team effort on our part from the start. We look forward to activating an entity in the Top 10 Most Wanted that is located in our own back yard!We are most grateful to the USFWS for giving us this opportunity to activate this rare entity."

==> ARRL HQ TO CLOSE FOR THANKSGIVING

ARRL Headquarters will be closed Thursday, November 27 and Friday, November 28 in observance of Thanksgiving. There will be no W1AW bulletins or code practice transmissions those days. The ARRL Letter will be distributed on Wednesday, November 26. There will be no ARRL Audio News on Friday, November 28. ARRL Headquarters will reopen Monday, December 1 at 8 AM Eastern Standard Time. We wish everyone a safe and bountiful Thanksgiving holiday.

==>SOLAR UPDATE

Tad "The Sun hath shed its kindly light, Our harvesting is gladly o'er" Cook, K7RA, this week reports: This is an early bulletin for the Thanksgiving holiday, as ARRL is closed on Friday, the regular day for release of this bulletin. We plan another brief regular propagation bulletin on Monday, December 1 that will contain the propagation numbers for November 20-26 in the regular format that normally appears at the end of the bulletin. On Friday, December 5, the propagation bulletin will be back on regular schedule, at least into spring 2009. We had our last glimpse of sunspot group 1008 as it was about to slip over our Sun's western horizon on November 18. No sunspots have emerged since then, but it seems a reasonable assumption that we will see more Solar Cycle 24 spots, but we do not know when. There is a prediction from USAF/NOAA that shows solar flux rising to 70 on December 8-9. This is just tracking a possible reappearance of the region that birthed sunspot group 1007 that we saw in the Sun's southern hemisphere from October 30 through November 6. Tonight ,high latitude regions may see some aurora caused by another solar wind stream from a coronal hole. But that same USAF/NOAA forecast mentioned earlier shows a planetary A index of just

12 for today, dropping to 8 on Thursday, then 5 (a very quiet level) until December 4-6 when they expect a planetary A index of 8, 15 and 10. The planetary A index is calculated with data from a collection of mid-latitude and higher magnetometers around the world, and 12 is a drop from Tuesday's (November 25) planetary A index of 17, when aurora was observed in Polar Regions. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Paul Laurence Dunbar's "A Thanksgiving Poem" <http://www.paullaurencedunbar.net/athanksgivingpoem.html>.

==>IN BRIEF:

* This Week on the Radio: This week, the SKCC Sprint and the RSGB 80 Meter Club Sprint (CW) are both on November 26. The CQ Worldwide DX Contest (CW) is November 29-30 and the ARCI Topband Sprint is December 4. Next weekend is the ARRL 160-Meter Contest on December 5-7. The TARA RTTY Melee and the Wake-Up! QRP Sprint are December 6. The TOPS Activity Contest is December 6-7 and the NAQCC Straight Key/Bug Sprint is December 10. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, December 7, 2008, for these online course sessions beginning on Friday, December 19, 2008: Amateur Radio Emergency Communications Level 2; Antenna Modeling; HF Digital Communications; and Radio Frequency Propagation. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cep@arrl.org>.

* Corrections: In last week's ARRL Letter, the vote tallies for Great Lakes Division Vice Director runners-up John Meyers, NB4K, and Daniel

Romanchik, KB6NU, were reversed. Romanchik received 1205 votes and Meyers received 1155 votes. The outcome of the election was reported accurately. In addition, Canada is the eighth country to do experimentation on 500 kHz, not 55 kHz.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:

ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

1088. 600 meter band

Newsgroup: rec.radio.amateur.moderated

Help me understand what is "experimental" about the 500kHz neighborhood?

It's not like this is some newly discovered spectrum, never used before.

Yet the FCC issues "experimental" licenses to operate there, and now I see the Canadians are doing the same. What are hams going to learn that isn't already well known from the nearly-100-years or so of previous use? (I wish I had a dime for every 15-18/45-48 silent period I logged as observed!)

Hans,

The FCC issues Experimental licenses for hams to operate on 600 meters
because that's the only vehicle they have for authorizing such use.

While 600 meters may not be newly discovered, it's new for hams:
explorers have already been to the South Pole, but there is still a lot
to be learned by going there, and while I've already seen DisneyWorld, I
don't begrudge my neighbor the chance to go.

From your mention of Silent Periods, I infer that you were a maritime
or shore station operator, and so you know a lot more about the band
than I do. That said, I can't help but wonder if what is "already known"
may not be all there is to know: after all, operating multi-kw
transmitters and long-wire antennas over salt water is a lot different
than using 20 watts erp from backyard antennas over lossy earth.

In any case, shipboard distress traffic goes by satellite now, and the
Coast Guard no longer monitors 500 KHz. If there's a chance for hams to
get a new band, and to learn about operating low power with highly
reactive antennas while keeping the art of Morse Code alive, I feel we
should move forward and make use of it.

73,

Bill, W1AC

Well, since the broadcast band is just above 500 kHz and navigation
beacons are just below 500 kHz, I highly doubt there is much that
isn't already known about the frequency region.

As far as I can see, the only reason for the experimental license is
that is the only way to authorize hams to use the frequency without
a rules change.

I take it you've never dealt with a national government agency.

Getting an experimental license takes weeks to months.

A rules change can take years.

I would imagine that the next time the FCC changes the rules for some
other reason, 500 kHz will get thrown in.

Amateur Radio Newsline(tm) Report 1633 - November 28, 2008

Amateur Radio Newsline report number 1633 with a release date of
Friday, November 28th, 2008 to follow in 5-4-3-2-1.

The following is a QST. Lots of repeaters could loose their homes down
under as one Australian state enacts new site fees. Also, the DX drought
may be over as astronomers say the new solar cycle is here and we celebrate
the life of a ham who refused to let his physical condition interfere with
his devotion to the hobby. Find out the details on this Thanksgiving Day
edition of Amateur Radio Newsline(tm) and report number 1633 coming your way
right now

REPEATER NEWS: AUSTRALIAN REPEATERS COULD LOOSE SITES OVER NEW FEES

Repeater owners in the Australian state of New South Wales are not happy
over a government decision to raise site rental fees and it could cause a
number of them to go QRT. Graham Kemp, VK4BB, of the WIA News, explains
what has transpired:

--

Phil Wait VK2DKN in a news posting to wia.org.au says that the Director
General of the NSW Department of Lands has written to the WIA upholding the
Departments decision to impose a $367 (Australian) fee for each amateur
radio facility located on NSW Crown Land.

The WIA had written to the Director General in August arguing for special
consideration for communications facilities maintained by small amateur
radio clubs, and highlighting the strategic community resource that amateur
radio communications facilities provide during emergencies.

In the Departments reply the Director General advises that the site rental
fees are prescribed under NSW State legislation, and cannot be reduced
below the minimum rent provisions in that legislation.

This is bad news for small amateur radio clubs which maintain repeater
facilities on NSW Crown Land, and also for those larger clubs which have
several affected repeater sites. The likely outcome is the closure of a
number of rural amateur radio repeater facilities, or at least their
relocation to less favorable sites.

On the other hand, larger well resourced clubs may welcome the opportunity to enter into an agreement which guarantees secure tenure for their repeater sites located on Crown Land.

I'm Graham Kemp, VK4BB in Brisbane, Australia, for the Amateur Radio Newsline.

--

Amateur radio clubs with repeaters in the region have a choice to make. Its pay up or go Q-R-T. That's because failure to enter into a rental agreement
when asked to do so by the New South Wales Department of Lands may result in eviction from a Crown Land site. (WIA News)

**

DX PROPAGATION: SCIENTISTS AY THAT THE NEW SUNSPOTS ARE HERE

Improved band may soon be on their way. Scientists say that after more than two years of few sunspots, even fewer solar flares, the sun is finally showing signs of life.

David Hathaway is a sunspot forecaster of the NASA Marshall Space Flight Center in Huntsville Alabama. In his opinion the solar minimum is behind us. He said that in October scientists counted five sunspot groups,. Hathaway says that this may not sound like much, but in a year with record-low numbers of sunspots and long stretches of spotlessness, five is significant.

Even more significant is the fact that four of the five sunspot groups belonged to Solar Cycle 24. That's the new and long-awaited next installment of the sun's 11 year solar cycle. Hathaway says that October was the first time sunspots from new Solar Cycle 24 outnumbered spots from old Solar Cycle 23.

Hathaway adds that this is a good sign that the new cycle is taking off. This will be welcome news to the ears of hams who have waited a long time to work some new and possibly rare DX. (NASA)

**

BREAKING DX NEWS: DESECHO TO BE ON IN FEBRUARY

The Desecheo Island DXpedition is now officially on for early next year. This as the U.S. Fish and Wildlife Service notifies the team that February 12th to the 26th 2009, will be the dates allocated for the radio operation.

These dates are coordinated with other Fish and Wildlife Service research activities scheduled on other parts of Desecheo. It also handles the scheduling security personnel for the camp.

Only fifteen operators will be allowed on the island at any given time. A total of 6 to 8 stations will be operational on the High Frequency bands including 160 and 6 meters.

Desecheo Island is #2 on the worlds Most Wanted DX List. For the latest news, please go to the team's website. Its in cyberspace at www.kp5us (Wï¿½GJ, K4UEE)

**

BREAKING DX NEWS: SPRATLEY OPERATION ON HOLD

Meantime, hams who have waited a long time to make contact with the Spratley Island group will have to be patient a bit longer. This as its announced that a planned operation has been put on hold. Amateur Radio Newslines's Don Carlson, KQ6FM, has more:

--

The long awaited 9M0 DXpedition to the Spratley Islands has been postponed. A team of six operators was expectedto activate Pulau Layang Layang Island in the Spratly group in March 2009.

Now, an according to their Web page dated November 14th puts the operation in to a state of delay. It says that due to a combination of personal and logistical reasons that it has been necessary to postpone the operation to a later date.

The announcement goes on to sat that its is hoped that the DXpedition will go ahead at a later date but none was announced. The posting notes that donations will be returned to those sponsors who made contributions to the proposed operation. More is on-line at www.spratly2009.com

Im Don Carlson, KQ6FM, in Reno.

--

We will have more DX related items later on in this weeks Newsline report. (E-Mail)

ENFORCEMENT: EVEN BROADCASTERS CANNOT INTERFERE

A broadcasters who interfered with other broadcaster has been fined by the FCC. This as Florida's Black Crow Radio, LLC gets hit with a $18,400 monetary forfeiture that's being paid in two parts. Amateur Radio Newsline's Bruce Tennant, K6PZW, explains:

--

The fine issued to Black Crow Radio is actually marked down from $23,000 and more than half of it has already been paid. Here's the story.

The forfeiture is based on allegations that Black Crow Radio's station WNDB AM, in Daytona Beach, Florida failed to ensure that emissions removed by 60 kHz to 75 kHz from the fundamental frequency of 1150 kHz are attenuated 65 dB below the unmodulated carrier level. Its also charged with failure to maintain effective locked fences around the bases of two of its antenna towers.

According to the November 13th notice, this past February 26, the agency began investigating a complaint that WNDB was causing interference to stations on 1070 kHz and 1230 kHz . Also that it was the source of general interference up and down the AM band. Agents from the Commission's Tampa Office monitored WNDB on its licensed frequency of 1150 kHz using a standard car radio and readily observed that the station could be heard up and down the AM band. The agents also heard WNDB's signal intermittently interfering with broadcast operations on 1070 and 1230 kHz.

On September 24th the Tampa Office issued a Notice of Apparent Liability for Forfeiture to Black Crow in the amount of $23,000 for the rules violations. Black Crow admitted part of the violation notice and submitted a payment in the amount of $12,000 for those violations. However it requested cancellation or reduction of the remaining $11,000 proposed forfeiture.

In its response the FCC said that due to its compliance for the 13 years WNDB had been on the air that it would reduce the remaining amount of the fine to $6400. However, it would not dismiss it entirely.

For the Amateur Radio Newsline I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Black Crow Radio LLC was given the customary 30 days to pay the outstanding remainder of the fine or to file a further appeal. (FCC)

**

ENFORCEMENT: WHAT A DIFFERENCE 140 FEET CAN MAKE

Here's one for the record books, and we mean literally. The FCC's San Francisco field office has cited United States Cellular Corporation for having one of its towers a rather small distance from where it was supposed to have been put up. Or is it at the correct location and is the FCC wrong? Here's the rest of this rather strange story.

According to a Notice of Violation released on October 10th, the FCC said that an August 28th inspection showed the tower in question to be approximately 140 feet from its registered location. Note that the violation is for an approximate rather than verified distance from the registration site. That's leading a lot of engineers to question by what legal authority the FCC can guess at a location and issue a citation based on this guesswork.

None the less, the FCC gave United States Cellular 20 days from the issuance of the Notice to submit a written statement concerning this matter. The response was to fully explain why each violation occurred, contain a statement of the specific actions taken to correct each violation and preclude recurrence, and include a time line for completion of pending corrective actions.

You can read the entire Notice of Violation at: http://www.fcc.gov/eb/FieldNotices/2003/DOC-286437A1.html) (FCC, CGC)

**

RADIO POLITICS: WATCH THE FCC CHANGE

According to news reports, while FCC Chairman Kevin Martin says that he is in no hurry to leave his post, we could see a three-member FCC for a while. This, depending on how long it takes President-elect Barack Obama's transition team to determine who the new Commission chairman will be.

Assuming Republican Commissioner Deborah Tate leaves because her term is up and that Martin leaves after the inauguration, there could be a 2 to 1 FCC for a while. The assumption is that one of the Democrats currently serving as a Commissioner will be named as interim chairman. This would mean that Michael Copps and Jonathan Adelstein along with Robert McDowell would make up the Commissioners for a while.

Several names that have surfaced as possibilities for FCC chairman. These include Julius Genachowski and Don Gips. Both are former FCC staffers under President Bill Clinton. (RW)

**

RADIO LAW: SENATORS LOOKING AT NEW FAIRNESS DOCTRINE

Democrats in the Congress are pushing for the reinstatement of the so-called "Fairness Doctrine" which forced broadcasters to offer equal time to both sides of controversial issues. According to the trade newspaper the Hollywood Reporter, House Speaker Nancy Pelosi and such influential Democratic senators as Barbara Boxer and Charles Schumer are pushing for its return, or something like it.

The Fairness Doctrine was abolished in 1987, paving the way for the type of talk radio that seems to dominate the A.M. broadcast band these days. With most talk radio dominated by conservatives. Now with President Elect Barack Obama moving into the White House in January of 2009, talk on Capital Hill about reinstating or even broadening the scope of a new Fairness Doctrine has again begun to surface once again. (NAB News)

**

COMMUNICATIONS LAW: MUSIC INDUSTRY CHALLANGED ON DIGITAL MUSIC SHARING

The music industry's litigation of private citizens who share songs via the Internet is coming under constitutional challenge. This with word that a Harvard Law School professor has launched a constitutional assault against

a federal copyright law at the heart of the industry's aggressive tactic which has brought in monetary payments from thousands of music file swappers since 2003.

According to news reports law professor Charles Nesson has come to the defense of a Boston University graduate student targeted in one of the music industry's lawsuits. He argues that the Digital Theft Deterrence and Copyright Damages Improvement Act of 1999 is unconstitutional because it effectively lets the Recording Industry Association of America which is a private organization to carry out civil enforcement of a criminal law. He also says the music industry group has abused the legal process by threatening the possibility of lengthy and costly lawsuits in an effort to intimidate people into settling cases out of court.

Charles Nesson is the founder of Harvard's Berkman Center for Internet and Society. He says that his goal is to stop the courts from allowing themselves to be used as a collection agency for the music industry. By taking on the case, Nesson hopes to challenge the basis for the music industry's suit, and all others like it. His challenge against the music industry was filed in the U.S. District Court in Boston, and is considered by many legal experts one of the most determined attempts to derail the industry's ongoing litigation against those who download and swap music files on-line. (Published news reports)

**

HAM RADIO ON THE NET: QRZ ACTS AGAINST SPAMMERS

The QRZ.com website as introduced new measures to prevent its users e-mail addresses from being harvested by spammers and their robot programs. Up until now the solution to this problem has been to display the address as a graphic image instead of plain text. While this works reasonably well to stop spammers, it also caused problems for many of our vision impaired

Wanting to serve all of its users, the website has now installed new javascript browser code that leaves the email encoded on the page until the user initiates a mouse action to display the address. The address displayed is in plain text, and is clickable to make sending off to other members e-mails easier. But as a safeguard against spammers QRZ has also installed code that only will enable the display of e-mail addresses only to other ham members of QRZ. In other words, you can see all the other information simply by doing a search but to see an e-mail address you must first log in

The managers of QRZ.com want to thank Jeff Iddings, W4GPL, for some great suggestions that helped develop this solution. (QRZ)

**

PUBLIC SERVICE: LA MARATHON MOVES TO MEMORIAL DAY WEEKEND

Some news for hams who are involved in the Los Angeles Marathon. Word that the event which was till now held the first Sunday in March, will move to

Memorial Day beginning in 2009.

Organizers said runners who registered for next year's race will be automatically signed up for the May 25, 2009 date. Those who already have paid the entry fee will be reimbursed in full if they are unable to participate. Volunteers such as ham radio communicators will likely be contacted by their supervisory personnel in regard to the date change.

More than 25,000 people competed in the 2008 Los Angeles Marathon earlier this year. (Published news reports)

**

NAMES IN THE NEWS: NCDXF ANNOUNCES ELECTION RESULTS

Some names in the news. Len Geraldi, K6ANP, is the first up. He's been selected as President of the famed Northern California DX Foundation.

The election took place at the organizations Board of Directors meeting on November 18th in Albany, California. Filling the other offices are Vice President Al Burnham K6RIM, Secretary Tom McShane NW6P and Treasurer Bruce Butler W6OSP.

The big surprise was the announcement by Rusty Epps, W6OAT, to retire from the organizations board of directors. This following 35 years of service to the group. More information about the Northern California DX Foundation is on-line at www.ncdxf.org. (NCDXF)

**

NAMES IN THE NEWS: ARRL ANNOUNCES RESULTS OF DIVISIONAL RACES

The ARRL Delta Division has a new Director and Vice Director, while hams in the Great Lakes Division voted to keep their incumbent Vice Director.

On Friday, November 21, ARRL staff members opened ballots for the Director and Vice Director races in the Delta Division and the Vice Director race in the Great Lakes Division. After all the ballots were counted, Gary Johnston, KI4LA, of Edgewood, Kentucky, was elected to keep his seat as Vice Director of the Great Lakes Division.

Delta Division Director Henry Leggette, WD4Q, of Memphis, Tennessee, did not seek re-election this term. Former Louisiana Section Manager Mickey Cox, K5MC, of West Monroe, with 1148 votes, was declared the new Delta Division Director. Arkansas Section Manager David Norris, K5UZ, won the Vice Directors seat.

In all other races, those running unopposed were elected or re-elected. Terms for Directors and Vice Directors begin at noon on January 1, 2009 and run for three years. (ARRL)

EMERGING TECHNOLOGY: WSPR SETS NEW DX RECORDS

A newly developed digital mode is breaking all sorts of QRP records. Its called the Weak Signal Propagation Reporter. It was developed by the man who gave us WSJT: Joe Taylor, W1SJT. Taylor calls it WSPR. Justin Giles-Clark, VK7TW, is in South Hobart, Tasmania, is here to tell us of the of the distance records broken and other that have been set:

--

Back on Friday, 31 Oct, Bob VK7KRW had a two way contact with Richard, N2JR, in Virginia, USA. on the 80M band, over a distance of 16300Kms and both stations were running 2watts, yes, only 2 watts!

Bob's antenna is an Inverted V dipole and Richard was using a Butternut ground mounted vertical. The SNR at that stage was around -25dB.

Bob VK7KRW has been recently experimenting with WSPR on the HF bands (15, 17, 20, 30, 40 & 80M) and he has had a number of QRP contacts into the UK, EU, JA, USA, Canada and ZL.

Bob mentioned that he reduced power to 1W and he was still received by Richard but unfortunately heard nothing in return at that power level.

Later that evening Bob received an email from Pat, F6IRF, who runs the WSPR net, confirming that we had set a new world distance record for a two way QRP contact on the 80M band. Bob mentioned that stations in the Northern hemisphere are desperately looking for more stations in the southern regions so if people want something to experiment with, try WSPR.

A call went out on the VK7 Regional News and records started to tumble with Dick VK7DIK making a bilateral contact with Joe Taylor K1JT over a distance of 23352km on 40m with just 5 watts.

Congratulation to Bob, Richard, Dick and Joe.

The powers just keep reducing and distances just keep increasing. Larry WB3ANQ was able to get through to VK6DI using just 5mW (+7dBm) over a distance 18615Km.

WSPRnet.org has all the information required and links to the software. The URL is: http://wsprnet.org/drupal/

Cheers from Justin VK7TW.

--

Again, the URL to get the WSPR software is WWW.wsprnet.org/drupal. With it, QRPDX seems to be a breeze. (WIA News)

**

WORLDBEAT - THE NETHERLANDS: HOLLAND ADOPTS AMBER ALERTS

Turning to news from around the globe, police in the Netherlands have started using Amber Alerts to notify the public of missing or abducted children. The Dutch system will incorporate pop-ups on personal computers, large digital advertising screens, e-mail, SMS text, instant messenger, RSS news feeds and Web site alerts via Flash. No word if hams in that nation plan to connect their repeaters to the system as has been done elsewhere.

The Netherlands Police Agency expects to issue an Amber Alert between five and 10 times a year. Amber Alerts began in the United States in the late 1990's as a tribute to a Texas 9 year old named Amber Hagerman who was abducted and slain. Since then several other nations around the world now have created similar systems. (RW)

**

DX

In DX, word that Bill Tackett, KN4N, is reportedly looking for operators for a Gunatanamo Bay, Cuba based operation to take place next spring or sooner. Conditions include that he or she must be active duty or retired military, hold a General class or higher license be in good health and preferably a non-smoker. If you know anyone interested in joining such an operation have that person contact kn4n (at) comcast (dot) net

And IV3YIM, is active as portable OD5/from Lebanon. He will be there until April 2009 and is active mostly in SSB/RTTY on 80 through 10 meters. Also listen out for him on CW and SK. QSL direct or via the bureau to his home call.

Lastly, keep on the lookout for Zimbabwe as 7Z1HB, comes on as Z21LS. He will operate mostly in SSB on 20 meters between November 30th and December 9th QSL this one direct to 7Z1HB or to DE1ZHB via the bureau.

(Above from various DX news sources).

**

A FINAL REMEMBERENCE: CELEBRATING THE LEGACY OF ARRL PRESIDENT EMERITUS GEORGE WILSON W4OYI

And lastly this week we say a final 73 to a friend of many years. This with the word of the passing of ARRL President Emeritus George S. Wilson, W4OYI, early on Tuesday, November 25th.

George's death hits very close to home because for many years he was a member of the committee that judges our Amateur Radio Newsline Young Ham of the Year Award and a very close personal friend to all of us. Mark Abramowicz, NT-V, heads that committee. Please join Mark as he takes a

look at the life of the man who lead the ARRL in what some may say were among the organizations most glorious days and left a legacy of accomplishment that few hams will likely ever match:

--

I have not had the pleasure to speak directly with George Wilson W4OYI., but his e-mails and input have been invaluable over the years I've served as chairman of Amateur Radio Newsline's Young Ham of the Year award committee.

He was one of our special judges and his insights into the candidates were very much appreciated by the committee.

George's loss is truly difficult for his family and the amateur radio community who knew and loved him. But his legacy is one that, I think we can safely say, is unmatched by any ARRL president in recent times.

George Wilson served as president of the organization from 1992 until he suffered a stroke in 1995 while in Washington D.C. representing the ARRL.

Up until the time of his death, George was president emeritus of the American Radio Relay League, one of only a handful of people ever granted this honor.

During his time as ARRL president, he was instrumental in a number of initiatives including helping to bring about the vanity call sign program and preserving access to sections of the 900 Mhz band for amateur radio.

And, it was in 1993 that George Wilson who used his legal skills as an attorney to argue an amateur radio case in federal court, which, in part, led to the famous PRB-1 rule from the FCC which solidifies ham radio tower privileges.

In 2004, George Wilson was presented the Special Achievement Award from the Dayton Amateur Radio Association for his outstanding record of service.

George is one of the few hams who came through the ranks, so to speak, to achieve the ARRL presidency and the other recognition he so richly deserved.

It was 1948 when 16-year-old George Wilson was first licensed by the FCC. He rode the bus from his home in Owensboro, Kentucky to Nashville, Tennessee to take that test.

He waited seven months to learn he had passed the FCC's Class B test and he was assigned the call sign W4OYI, which he kept for his entire life.

George's first contact was on 40 meter CW with a home-brew rig. It was 1949 when George got his first taste for public service when the Green River flooded the community of Calhoun.

That was in the days before 2-meter HTs and cell phones. George and his fellow hams used CW rigs on two ferries and one installed at the courthouse to dispatch rescue crews to help those stranded in the flooding. It's believed those actions saved many lives.

George also is responsible for coming up with a special drill for emergency communicators in the 1960s. It was called the envelope drill and it was described this way in a 1962 article in QST.

"Groups of radio amateurs meet to hold an emergency drill. A net control station is set up and teams go out in their cars to specific locations. Each team carries with it a few sealed envelopes. Once established at their locations, they open the envelopes containing an emergency scenario and check in with the net control who offers further instructions and awaits additional messages and traffic."

It became a popular way to train emergency communicators and it was George Wilson who devised it.

W4OYI has served as an assistant emergency coordinator and official relay station in the ARRL's Radio Emergency Corp, the predecessor to the Amateur Radio Emergency Service. He also served as a Section Emergency Coordinator and later Section Communications Manager in Kentucky.

It was George who worked with local officials in his community to convince that the National Weather Service during the mid-1970s to install an early warning radio system. This happened after a twister had hit nearby Brandenburg, Kentucky.

The Owensboro Hydroplane Races - the ones featuring those big, high-speed boats racing up and down the Ohio River - they had George Wilson to thank for overseeing communications for the event for many years.

And, it was George Wilson who fostered use of Amateur Television technology to monitor the boats from the center of the Owensboro Ohio River Bridge.

W4OYI later became a vice director and later division director. He was elected to a vice president's post in the ARRL and later became first vice president. When the incumbent ARRL President Larry Price,W4RA, announced he would not run for another term, George Wilson was elected to succeed him.

Although confined to a wheelchair in his last years, W4OYI was active on the ham bands and monitored his local repeater for those in need of information or a simple chat.

He is survived by his wife, Marian. They were married for 51 years. He also has a son, Berry, and a daughter, Jennifer, and two grandchildren.

Marian has asked Amateur Radio Newsline to tell all of George's fellow hams that they can remember him by making a donation to the American Red Cross.

For the final time: "W4OYI, this is NT3V, saying 73 on behalf of all of us who have benefited from your generous contributions to the amateur radio service."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

George Wilson, W4OYI, was one of the true good guys of ham radio. As such he would not want us to mourn his passing. Knowing George as I did he

would only want us all to carry on the traditions that have made amateur radio the great service to mankind that it is. And his dedication to it will never be forgotten. (ARNewsline(tm))

REPEATER NEWS: AUSTRALIAN REPEATERS COULD LOOSE SITES OVER NEW FEES

Repeater owners in the Australian state of New South Wales are not happy over a government decision to raise site rental fees and it could cause a number of them to go QRT. Graham Kemp, VK4BB, of the WIA News, explains what has transpired:

--

Phil Wait VK2DKN in a news posting to wia.org.au says that the Director General of the NSW Department of Lands has written to the WIA upholding the Departments decision to impose a $367 (Australian) fee for each amateur radio facility located on NSW Crown Land.

The WIA had written to the Director General in August arguing for special consideration for communications facilities maintained by small amateur radio clubs, and highlighting the strategic community resource that amateur radio communications facilities provide during emergencies.

In the Departments reply the Director General advises that the site rental fees are prescribed under NSW State legislation, and cannot be reduced below the minimum rent provisions in that legislation.

This is bad news for small amateur radio clubs which maintain repeater facilities on NSW Crown Land, and also for those larger clubs which have several affected repeater sites. The likely outcome is the closure of a number of rural amateur radio repeater facilities, or at least their relocation to less favorable sites.

On the other hand, larger well resourced clubs may welcome the opportunity to enter into an agreement which guarantees secure tenure for their repeater sites located on Crown Land.

I'm Graham Kemp, VK4BB in Brisbane, Australia, for the Amateur Radio Newsline.

--

Amateur radio clubs with repeaters in the region have a choice to make. Its pay up or go Q-R-T. That's because failure to enter into a rental agreement when asked to do so by the New South Wales Department of Lands may result in eviction from a Crown Land site. (WIA News)

BREAKING DX NEWS: SPRATLEY OPERATION ON HOLD

Meantime, hams who have waited a long time to make contact with the Spratley Island group will have to be patient a bit longer. This as its announced that a planned operation has been put on hold. Amateur Radio Newslines's Don Carlson, KQ6FM, has more:

--

The long awaited 9M0 DXpedition to the Spratley Islands has been postponed. A team of six operators was expectedto activate Pulau Layang Layang Island in the Spratly group in March 2009.

Now, an according to their Web page dated November 14th puts the operation in to a state of delay. It says that due to a combination of personal and logistical reasons that it has been necessary to postpone the operation to a later date.

The announcement goes on to sat that its is hoped that the DXpedition will go ahead at a later date but none was announced. The posting notes that donations will be returned to those sponsors who made contributions to the proposed operation. More is on-line at www.spratly2009.com

Im Don Carlson, KQ6FM, in Reno.

--

We will have more DX related items later on in this weeks Newsline report. (E-Mail)

ENFORCEMENT: EVEN BROADCASTERS CANNOT INTERFERE

A broadcasters who interfered with other broadcaster has been fined by the FCC. This as Florida's Black Crow Radio, LLC gets hit with a $18,400 monetary forfeiture that's being paid in two parts. Amateur Radio

Newsline's Bruce Tennant, K6PZW, explains:

--

The fine issued to Black Crow Radio is actually marked down from $23,000 and more than half of it has already been paid. Here's the story.

The forfeiture is based on allegations that Black Crow Radio's station WNDB AM, in Daytona Beach, Florida failed to ensure that emissions removed by 60 kHz to 75 kHz from the fundamental frequency of 1150 kHz are attenuated 65 dB below the unmodulated carrier level. Its also charged with failure to maintain effective locked fences around the bases of two of its antenna towers.

According to the November 13th notice, this past February 26, the agency began investigating a complaint that WNDB was causing interference to stations on 1070 kHz and 1230 kHz . Also that it was the source of general interference up and down the AM band. Agents from the Commission's Tampa Office monitored WNDB on its licensed frequency of 1150 kHz using a standard car radio and readily observed that the station could be heard up and down the AM band. The agents also heard WNDB's signal intermittently interfering with broadcast operations on 1070 and 1230 kHz.

On September 24th the Tampa Office issued a Notice of Apparent Liability for Forfeiture to Black Crow in the amount of $23,000 for the rules violations. Black Crow admitted part of the violation notice and submitted a payment in the amount of $12,000 for those violations. However it requested cancellation or reduction of the remaining $11,000 proposed forfeiture.

In its response the FCC said that due to its compliance for the 13 years WNDB had been on the air that it would reduce the remaining amount of the fine to $6400. However, it would not dismiss it entirely.

For the Amateur Radio Newsline I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Black Crow Radio LLC was given the customary 30 days to pay the outstanding remainder of the fine or to file a further appeal. (FCC)

**

ENFORCEMENT: WHAT A DIFFERENCE 140 FEET CAN MAKE

Here's one for the record books, and we mean literally. The FCC's San Francisco field office has cited United States Cellular Corporation for having one of its towers a rather small distance from where it was supposed to have been put up. Or is it at the correct location and is the FCC wrong? Here's the rest of this rather strange story.

According to a Notice of Violation released on October 10th, the FCC said that an August 28th inspection showed the tower in question to be approximately 140 feet from its registered location. Note that the

violation is for an approximate rather than verified distance from the registration site. That's leading a lot of engineers to question by what legal authority the FCC can guess at a location and issue a citation based on this guesswork.

None the less, the FCC gave United States Cellular 20 days from the issuance of the Notice to submit a written statement concerning this matter. The response was to fully explain why each violation occurred, contain a statement of the specific actions taken to correct each violation and preclude recurrence, and include a time line for completion of pending corrective actions.

You can read the entire Notice of Violation at: http://www.fcc.gov/eb/FieldNotices/2003/DOC-286437A1.html) (FCC, CGC)

**

RADIO POLITICS: WATCH THE FCC CHANGE

According to news reports, while FCC Chairman Kevin Martin says that he is in no hurry to leave his post, we could see a three-member FCC for a while. This, depending on how long it takes President-elect Barack Obama's transition team to determine who the new Commission chairman will be.

Assuming Republican Commissioner Deborah Tate leaves because her term is up and that Martin leaves after the inauguration, there could be a 2 to 1 FCC for a while. The assumption is that one of the Democrats currently serving as a Commissioner will be named as interim chairman. This would mean that Michael Copps and Jonathan Adelstein along with Robert McDowell would make up the Commissioners for a while.

Several names that have surfaced as possibilities for FCC chairman. These include Julius Genachowski and Don Gips. Both are former FCC staffers under President Bill Clinton. (RW)

**

RADIO LAW: SENATORS LOOKING AT NEW FAIRNESS DOCTRINE

Democrats in the Congress are pushing for the reinstatement of the so-called "Fairness Doctrine" which forced broadcasters to offer equal time to both sides of controversial issues. According to the trade newspaper the Hollywood Reporter, House Speaker Nancy Pelosi and such influential Democratic senators as Barbara Boxer and Charles Schumer are pushing for its return, or something like it.

The Fairness Doctrine was abolished in 1987, paving the way for the type of talk radio that seems to dominate the A.M. broadcast band these days. With most talk radio dominated by conservatives. Now with President Elect Barack Obama moving into the White House in January of 2009, talk on Capital Hill about reinstating or even broadening the scope of a new Fairness Doctrine has again begun to surface once again. (NAB News)

COMMUNICATIONS LAW: MUSIC INDUSTRY CHALLENGED ON DIGITAL MUSIC SHARING

The music industry's litigation of private citizens who share songs via the Internet is coming under constitutional challenge. This with word that a Harvard Law School professor has launched a constitutional assault against a federal copyright law at the heart of the industry's aggressive tactic which has brought in monetary payments from thousands of music file swappers since 2003.

According to news reports law professor Charles Nesson has come to the defense of a Boston University graduate student targeted in one of the music industry's lawsuits. He argues that the Digital Theft Deterrence and Copyright Damages Improvement Act of 1999 is unconstitutional because it effectively lets the Recording Industry Association of America which is a private organization to carry out civil enforcement of a criminal law. He also says the music industry group has abused the legal process by threatening the possibility of lengthy and costly lawsuits in an effort to intimidate people into settling cases out of court.

Charles Nesson is the founder of Harvard's Berkman Center for Internet and Society. He says that his goal is to stop the courts from allowing themselves to be used as a collection agency for the music industry. By taking on the case, Nesson hopes to challenge the basis for the music industry's suit, and all others like it. His challenge against the music industry was filed in the U.S. District Court in Boston, and is considered by many legal experts one of the most determined attempts to derail the industry's ongoing litigation against those who download and swap music files on-line. HAM RADIO ON THE NET: QRZ ACTS AGAINST SPAMMERS

The QRZ.com website as introduced new measures to prevent its users e-mail addresses from being harvested by spammers and their robot programs. Up until now the solution to this problem has been to display the address as a graphic image instead of plain text. While this works reasonably well to stop spammers, it also caused problems for many of our vision impaired

Wanting to serve all of its users, the website has now installed new javascript browser code that leaves the email encoded on the page until the user initiates a mouse action to display the address. The address displayed is in plain text, and is clickable to make sending off to other members e-mails easier. But as a safeguard against spammers QRZ has also installed code that only will enable the display of e-mail addresses only to other ham members of QRZ. In other words, you can see all the other information simply by doing a search but to see an e-mail address you must first log in

The managers of QRZ.com want to thank Jeff Iddings, W4GPL, for some great suggestions that helped develop this solution. (QRZ)

**

PUBLIC SERVICE: LA MARATHON MOVES TO MEMORIAL DAY WEEKEND

Some news for hams who are involved in the Los Angeles Marathon. Word that the event which was till now held the first Sunday in March, will move to Memorial Day beginning in 2009.

Organizers said runners who registered for next year's race will be automatically signed up for the May 25, 2009 date. Those who already have paid the entry fee will be reimbursed in full if they are unable to participate. Volunteers such as ham radio communicators will likely be contacted by their supervisory personnel in regard to the date change.

More than 25,000 people competed in the 2008 Los Angeles Marathon earlier this year. (Published news reports)

NAMES IN THE NEWS: NCDXF ANNOUNCES ELECTION RESULTS

Some names in the news. Len Geraldi, K6ANP, is the first up. He's been selected as President of the famed Northern California DX Foundation.

The election took place at the organizations Board of Directors meeting on November 18th in Albany, California. Filling the other offices are Vice President Al Burnham K6RIM, Secretary Tom McShane NW6P and Treasurer Bruce Butler W6OSP.

The big surprise was the announcement by Rusty Epps, W6OAT, to retire from the organizations board of directors. This following 35 years of service to the group. More information about the Northern California DX Foundation is on-line at www.ncdxf.org. (NCDXF)

**

NAMES IN THE NEWS: ARRL ANNOUNCES RESULTS OF DIVISIONAL RACES

The ARRL Delta Division has a new Director and Vice Director, while hams in the Great Lakes Division voted to keep their incumbent Vice Director.

On Friday, November 21, ARRL staff members opened ballots for the Director and Vice Director races in the Delta Division and the Vice Director race in the Great Lakes Division. After all the ballots were counted, Gary Johnston, KI4LA, of Edgewood, Kentucky, was elected to keep his seat as Vice Director of the Great Lakes Division.

Delta Division Director Henry Leggette, WD4Q, of Memphis, Tennessee, did not seek re-election this term. Former Louisiana Section Manager Mickey Cox, K5MC, of West Monroe, with 1148 votes, was declared the new Delta Division Director. Arkansas Section Manager David Norris, K5UZ, won the Vice Directors seat.

In all other races, those running unopposed were elected or re-elected. Terms for Directors and Vice Directors begin at noon on January 1, 2009 and run for three years. (ARRL)

EMERGING TECHNOLOGY: WSPR SETS NEW DX RECORDS

A newly developed digital mode is breaking all sorts of QRP records. Its called the Weak Signal Propagation Reporter. It was developed by the man who gave us WSJT: Joe Taylor, K1JT. Taylor calls it WSPR. Justin Giles-Clark, VK7TW, is in South Hobart, Tasmania, is here to tell us of the of the distance records broken and other that have been set:

--

Back on Friday, 31 Oct, Bob VK7KRW had a two way contact with Richard, N2JR, in Virginia, USA. on the 80M band, over a distance of 16300Kms and both stations were running 2watts, yes, only 2 watts!

Bob's antenna is an Inverted V dipole and Richard was using a Butternut ground mounted vertical. The SNR at that stage was around -25dB.

Bob VK7KRW has been recently experimenting with WSPR on the HF bands (15, 17, 20, 30, 40 & 80M) and he has had a number of QRP contacts into the UK, EU, JA, USA, Canada and ZL.

Bob mentioned that he reduced power to 1W and he was still received by Richard but unfortunately heard nothing in return at that power level.

Later that evening Bob received an email from Pat, F6IRF, who runs the WSPR net, confirming that we had set a new world distance record for a two way QRP contact on the 80M band. Bob mentioned that stations in the Northern hemisphere are desperately looking for more stations in the southern regions so if people want something to experiment with, try WSPR.

A call went out on the VK7 Regional News and records started to tumble with Dick VK7DIK making a bilateral contact with Joe Taylor K1JT over a distance of 23352km on 40m with just 5 watts.

Congratulation to Bob, Richard, Dick and Joe.

The powers just keep reducing and distances just keep increasing. Larry WB3ANQ was able to get through to VK6DI using just 5mW (+7dBm) over a distance 18615Km.

WSPRnet.org has all the information required and links to the software. The URL is: http://wsprnet.org/drupal/

Cheers from Justin VK7TW.

--

Again, the URL to get the WSPR software is WWW.wsprnet.org/drupal. With it, QRPDX seems to be a breeze. (WIA News)

**

WORLDBEAT - THE NETHERLANDS: HOLLAND ADOPTS AMBER ALERTS

Turning to news from around the globe, police in the Netherlands have started using Amber Alerts to notify the public of missing or abducted children. The Dutch system will incorporate pop-ups on personal computers, large digital advertising screens, e-mail, SMS text, instant messenger, RSS news feeds and Web site alerts via Flash. No word if hams in that nation plan to connect their repeaters to the system as has been done elsewhere.

The Netherlands Police Agency expects to issue an Amber Alert between five and 10 times a year. Amber Alerts began in the United States in the late 1990's as a tribute to a Texas 9 year old named Amber Hagerman who was abducted and slain. Since then several other nations around the world now have created similar systems. (RW)

A FINAL REMEMBRANCE: CELEBRATING THE LEGACY OF ARRL PRESIDENT EMERITUS GEORGE WILSON W4OYI

And lastly this week we say a final 73 to a friend of many years. This with the word of the passing of ARRL President Emeritus George S. Wilson, W4OYI, early on Tuesday, November 25th.

George's death hits very close to home because for many years he was a member of the committee that judges our Amateur Radio Newsline Young Ham of the Year Award and a very close personal friend to all of us. Mark Abramowicz, NT-V, heads that committee. Please join Mark as he takes a

look at the life of the man who lead the ARRL in what some may say were among the organizations most glorious days and left a legacy of accomplishment that few hams will likely ever match:

--

I have not had the pleasure to speak directly with George Wilson W4OYI., but his e-mails and input have been invaluable over the years I've served as chairman of Amateur Radio Newsline's Young Ham of the Year award committee.

He was one of our special judges and his insights into the candidates were very much appreciated by the committee.

George's loss is truly difficult for his family and the amateur radio community who knew and loved him. But his legacy is one that, I think we can safely say, is unmatched by any ARRL president in recent times.

George Wilson served as president of the organization from 1992 until he suffered a stroke in 1995 while in Washington D.C. representing the ARRL.

Up until the time of his death, George was president emeritus of the American Radio Relay League, one of only a handful of people ever granted this honor.

During his time as ARRL president, he was instrumental in a number of initiatives including helping to bring about the vanity call sign program and preserving access to sections of the 900 Mhz band for amateur radio.

And, it was in 1993 that George Wilson who used his legal skills as an attorney to argue an amateur radio case in federal court, which, in part, led to the famous PRB-1 rule from the FCC which solidifies ham radio tower privileges.

In 2004, George Wilson was presented the Special Achievement Award from the Dayton Amateur Radio Association for his outstanding record of service.

George is one of the few hams who came through the ranks, so to speak, to achieve the ARRL presidency and the other recognition he so richly deserved.

It was 1948 when 16-year-old George Wilson was first licensed by the FCC. He rode the bus from his home in Owensboro, Kentucky to Nashville, Tennessee to take that test.

He waited seven months to learn he had passed the FCC's Class B test and he was assigned the call sign W4OYI, which he kept for his entire life.

George's first contact was on 40 meter CW with a home-brew rig. It was 1949 when George got his first taste for public service when the Green River flooded the community of Calhoun.

That was in the days before 2-meter HTs and cell phones. George and his fellow hams used CW rigs on two ferries and one installed at the courthouse to dispatch rescue crews to help those stranded in the flooding. It's believed those actions saved many lives.

George also is responsible for coming up with a special drill for emergency communicators in the 1960s. It was called the envelope drill and it was described this way in a 1962 article in QST.

"Groups of radio amateurs meet to hold an emergency drill. A net control station is set up and teams go out in their cars to specific locations. Each team carries with it a few sealed envelopes. Once established at their locations, they open the envelopes containing an emergency scenario and check in with the net control who offers further instructions and awaits additional messages and traffic."

It became a popular way to train emergency communicators and it was George Wilson who devised it.

W4OYI has served as an assistant emergency coordinator and official relay station in the ARRL's Radio Emergency Corp, the predecessor to the Amateur Radio Emergency Service. He also served as a Section Emergency Coordinator and later Section Communications Manager in Kentucky.

It was George who worked with local officials in his community to convince that the National Weather Service during the mid-1970s to install an early warning radio system. This happened after a twister had hit nearby Brandenburg, Kentucky.

The Owensboro Hydroplane Races - the ones featuring those big, high-speed boats racing up and down the Ohio River - they had George Wilson to thank for overseeing communications for the event for many years.

And, it was George Wilson who fostered use of Amateur Television technology to monitor the boats from the center of the Owensboro Ohio River Bridge.

W4OYI later became a vice director and later division director. He was elected to a vice president's post in the ARRL and later became first vice president. When the incumbent ARRL President Larry Price,W4RA, announced he would not run for another term, George Wilson was elected to succeed him.

Although confined to a wheelchair in his last years, W4OYI was active on the ham bands and monitored his local repeater for those in need of information or a simple chat.

He is survived by his wife, Marian. They were married for 51 years. He also has a son, Berry, and a daughter, Jennifer, and two grandchildren.

Marian has asked Amateur Radio Newsline to tell all of George's fellow hams that they can remember him by making a donation to the American Red Cross.

For the final time: "W4OYI, this is NT3V, saying 73 on behalf of all of us who have benefited from your generous contributions to the amateur radio service."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

George Wilson, W4OYI, was one of the true good guys of ham radio. As such he would not want us to mourn his passing. Knowing George as I did he

would only want us all to carry on the traditions that have made amateur radio the great service to mankind that it is. And his dedication to it will never be forgotten. (ARNewsline")

Spent yesterday doing my usual Saturday-after-thanksgiving stint of CQWWCW at the W0AIH superstation. Paul keeps a TV in the "shack" so we can keep up to date on college football scores during the slack periods on our band. (You can see the TV at http://www.rarexpo.org/files/u1/chaletpano1.jpg near the center of the photo on top of the amplifier rack). As you can imagine, surrounded with 8 or 9 legal-limit stations in the same room with three big amps directly underfoot, reception from an "off-the-air" antenna in a rural location isn't exactly studio quality. Over the years it's been nice to be able to read the scores on the bottom-screen "scroll" as we search for that next elusive multiplier. Needless to say however, actually "watching" the game, or even a particular play is out of the question due to continuous interference on the screen.

Until this weekend.

Paul retired the old analog set and installed a new digital receiver fed by the same old small TV yagi that's been up for many years. The difference is phenomenal..... the DTV set seemed almost completely unaware of the RF-rich environment in which it sat, only >>very<< occasionally showed any glitch at all, usually a temporary bit of pixilation. This isn't a specially selected set, but only what was "cheap at WalMart".

Maybe TVI has been relegated to the ham radio past, like spark, paper logs, and Morse tests in front of a stern government employee.

I have two DTV's in the house and one in the RV. One is LCD, the other two
are plasma. None seem to generate any objectionable levels of noise on HF.

> beacons are just below 500 kHz, I highly doubt there is much that
> isn't already known about the frequency region.

While there is knowledge in the world about those frequencies, a good argument can be made for keeping it. Without users who can learn the characteristics of communication on those frequencies, and put it to some use, the knowledge can be lost. Witness BPL, where a group of digital literate but HF illiterate workers tried to impose their idea of "what should work" in an area they didn't have knowledge.

Yet as a person who now has experience in both areas, it was obvious to me from the moment I heard of the concept that it wouldn't work. And a lot of other people too.

But back to the subject at hand...

I think that there is the mistaken impression that Hams are always going to discover something new, something unknown. This is nice when it happens, but it isn't the only thing we are here for. Let us take propagation for example. Different groups of frequencies have strikingly different modes and effects of propagation.

One can either read about it in a book - after all, a lot is known about propagation - or one can learn about it first hand by trying to talk DX on 80 meters during the daytime, or 10 meters during the sunspot minimum, and so on.

This is a great chance for some hands-on learning. It may also be the chance to get a "foot in the door", where me might be able to get an

allocation in the future.

I'm not sure it's going to work that way....

If you are in a really strong signal area for the DTV, the problem should be significantly less.

However, as you approach weaker DTV signals the problem of the 'digital cliff' appears. What seems to be a perfect signal to the neighbor's signal may just vanish when the interfering signal is added, and I'd expect the TV viewer to be much more offended by that than by a little herringbone. This is based on putting in the first digital transmitter in the SF Bay area in the late '90s.

Ahhh Such is the nature of "digital" transmissions. They are great
until you reach a SNR where the error rates start increasing and data
gets lost. A local ham station could easily lower the SNR seen at the
DTV receiver and produce a degraded TV watching experience. Given the
normal duty cycle of ham radio, I wonder how often this will be
noticed.

I think that the DTV switch will generally lower TVI for most
situations and make it much more difficult to diagnose when it is a
problem. However, I don't have *any* technical justification for
this... Yet.... It sure will be ineresting to watch this unfold
though.

W0AIH's location, while not completely in the middle of nowhere, isn't
exactly under the towers either. Especially for channels 8 and 13.

I wonder if the typical viewer will ever figure out that the intermittent

disappearance of signal is due to the nearby ham?

Amateur Radio Newsline(tm) Report 1634 - December 5, 2008

Amateur Radio Newsline report number 1634 with a release date of Friday, December 5th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. Manned ham radio in space hits year 25. We take you back to the very beginning. Also, a new European 40 meter plan to become effective in March of 2009 and the story of an award based on a famous bird of flight. Find out which one on Amateur Radio Newsline(tm) report number 1634 coming your way right now.

HAM RADIO IN SPACE: CELEBRATING THE 25TH ANNIVERSARY OF W5LFL AND STS-9

ARISS -- Amateur Radio on the International Space Station -- is celebrating the 25th anniversary of the first manned ham radio operation from Earth orbit by Owen Garriott, W5LFL. Bill Pasternak, WA6ITF, was there a quarter of a century ago when he was the Field Producer for the film making team that captured this historic event. Hes here now to take us on a trip back through time:

--

If you were a ham a decade and a half ago you might remember these words:

--

Roy Neal K6DUE: "This is the story of an expedition, the flight of STS-9. The Columbia. And these are the explorers: John Young, the commander; Brewster Shaw the shuttle pilot; and the scientists Dr's Ulf Merbold, Byron Lichtenberg, Robert Parker and Dr. Owen Garriott -- an astronaut who also is amateur radio operator W5LFL. This is an expedition to probe the outer limits of science and amateur radio's newest frontier."

--

That is the late Roy Neal, K6DUE, as he introduced a video titled "Amateur Radio's Newest Frontier." It was the story of the first ham radio operator to take an amateur station to space. That ham radio astronaut -- Owen Garriott, W5LFL.

--

Owen Garriott W5LFL: "I was still in high school and my dad came home from work one day and said that a friend of his at the office was going to be

teaching a code class and would I like to come along with him? So, at that point, having not much to else do in the evenings I began going to code class with my father foe a period of 3 or 4 months at the Enid Amateur Radio Club which is still in existance -- W5 HTK -- in Enid Oklahoma.

And the a few months later he said that this friend is going to be teaching a theory class down at the local high school and would I like to come along to that. So I was still game and my father and I ended up going through both the code and theory classes and getting our licenses just toward the end of World War 2.

--

It was on November 28th, 1983 that Garriott rode the spaceship Columbia to Earth orbit on mission STS 9. A few days later, he became the first ham radio operator to ever come on the air fromspace. This historic moment was also captured for posterity in the "Amateur Radio's Newest Frontier:"

--
Owen Garriott, W5LFL: "This is W5LFL in Columbia. W5LFL in Columbia orbiting the Earth at an altitude of 135 nautical miles and passing over the U.S. west coast calling CQ. Calling CQ North America. This is W5LFL in Columbia."

--

A moment later W5LFL held his first contact on-orbit with Lance Collister, WA1JXN, of Frenchtown, Montana:

--

Lance Collister WA1JXN: "WA1JXN in Frenchtown, Montana, standing by."

Owen Garriott W5LFL: "WA1JXN. Hello WA1JXN, this is W5LFL and I picked up your signal fairly weekly. I think our attitude is not really optimum yet but you're our first contact from orbit."

--

Owen Garriott's ham radio adventures on STS-9 ushered in a host of ham radio in space outreach activities that first evolved into SAREX -- The Shuttle Amateur Radio Experiment.

--

Actual audio of early SAREX contact between W0ORE and GW6GW. Hear it in the mp3 version of the newscast downloadable at www.arnewsline.org.

--

With the commissioning of the International Space Station that mission continues today with ARISS -- the Amateur Radio on the International Space Station program. And little more than a month or so ago Owen Garriott's son Richard, W5KWQ, became the first second generation space traveler to hold QSO's with hams here on Earth.

--

Actual ARISS audio of contact between W5KWQ and W4TNJ. Hear it in the mp3 version of the newscast downloadable at www.arnewsline.org.

--

Now to celebrate 25 years of manned amateur radio operations from space, the ARISS group has planned a set of special event opportunities during the month of December and part of January 2009. A special certificate is being developed for those who communicate with the ISS, either 2-way direct with the crew, through the digipeater, or using the on-orbit cross band repeater. Certificates will also be available for one-way reception of SSTV or voice downlink signals.

Twenty-five years ago, Amateur Radios Newest Frontier ended with these words:

--

Roy Neal, K6DUE: "STS-9 was only a beginning. The communicators off amateur radio are truly on their way to the new frontier of space and no one, no one can predict exactly how far they will go."

--

We still do not know the final answer as to how far ham radio in space will go. Maybe to the moon. To Mars or beyond. What it is safe to say is that in the past 25 years, manned ham radio operations from space have come a long, long, way. And ARISS says that this is the time to celebrate the past and to say thank you to Owen Garriott, W5LFL, for opening the door.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the newsroom in Los Angeles.

--

More information about this 25th anniversary celebration of Owen Garriott, W5LFL, first on-orbit mission is on-line at www dot ariss dot org or www dot rac dot ca slash ariss. Copies of the movie Amateur Radio's Newest Frontier suitable for viewing as a club meeting program should still be available from the American Radio Relay League. (ARNewsline(tm), ARISS)

**

HAM RADIO IN SPACE: SOUTH AFRICA TO LAUNCH 2ND HAMSAT IN MARCH

Ham radio will soon have another orbiting star in the sky. This with the announcement that South Africa's second satellite carrying a amateur is now scheduled to be launched on March 25th, 2009.

The bird I called SumbandilaSat. The amateur radio portion will be an FM voice repeater on-orbit. Specifically, it's a crossband transponder with an uplink in the 2 meter band and a downlink in the 440 MHz amateur allocation.

Also on board will be a store and forward voice digipeater. This unit acts as a parrot immediately repeating back transmissions beamed to it in the same way a packet digipeater repeats back data.

Last is a rather unique beacon system. It to is voice rather than the more common Morse C-W found on most other ham radio satellites.

But SumbandilaSat will not be totally dedicated to amateur radio. The satellite will also contain a number of scientific experiments. These include a Very Low Frequency radio research project for researchers at the University of KwaZulu-Natal and an architectural radiation experiment for commercial off the shelf devices by the University of Stellenbosch.

Further information on the launch of SumbandilaSat is available at www.amsatsa.org.za. (AMSAT-SA, Southgate)

**

RESTRUCTURING: NEW EUROPEAN 40 METER PLAN IN LATE MARCH

A new 40 meter European bandplan is set to go into effect in the first quarter of 2009. At the recent IARU Region 1 Conference in Croatia, a new advisory band plan was adopted for the 7 MHz band to be effective from March 29th, 2009.

Why March 29th? This is the date by which broadcast stations should have vacated the 7.1 to 7.2MHz segment. It then becomes an amateur primary allocation. This, in accordance with the agreements made at the 2003 World Administrative Radio Conference and agreed to under international treaty. (GB2RS)

**

RADIO RESTRUCTURING: GROUP PROPOSES MOVING THE AM BROADCAST BAND

Here in the USA, a group calling itself the Broadcast Maximization Committee, has recommended the conversion of all AM stations to digital broadcasting and their migration to a new spectrum allocation over an extended period of time. It also proposes relocating the Low Power FM service to a portion of this spectrum.

In a nutshell, the Broadcast Maximization Committee plan would extend the current FM band downward to include frequencies 76.1 to 87.7 MHz with a 100 kHz channel spacing. This would create 117 new channels. The first eight channels from 87.0 to 87.7 MHz would be reserved for non commercial use as they would be contiguous to the current non commercial broadcasting allocation.

The next 100 channels from 77.0 to 86.9 MHz would be used to migrate AM stations to the proposed FM new extended band channels, where they would operate in digital mode. One channel at 76.9 MHz would be set aside for NOAA and other government use nationwide. The last eight channels from 76.1 to 76.8 MHz would be for Low Power FM use. Lastly, the vacated AM band from 540 to 1700 kHz) would open up for multiple uses including an

improved AM broadcast service.

While the policies, standards and priorities for an AM migration would need to be developed, the Broadcast Maximization Committee has offered a technical plan to show that its proposal is possible and to encourage further discussions. What the group has not addressed is what to do about the 10's of millions of people who want to listen to AM radio the way it is on a $5 radio that anyone can afford to own. (RW, BE, others)

ENFORCEMENT: $1500 FINE FOR JAMMING A SCHOOL BUS

The FCC has affirmed a $1500 Forfeiture to Dale Lloyd Allred of Tunnel Hill, Georgia. This, for willful and repeated operation of an unlicensed transmitter and interference with licensed radio communications in nearby Dalton, Georgia. Amateur Radio Newsline's Bruce Tennant, K6PZW, says it all revolves around a business contract that was lost:

--

In response to several complaints over last summer of interference to school bus radio operations coming from Dalton Communications, Inc., agents from the Commission's Atlanta Office of the Enforcement Bureau monitored the frequency 157.5675 MHz in Dalton. They observed repeated radio transmissions directly on top of school bus communications, often disrupting the school bus radio transmissions. Using a mobile direction finding vehicle, identified the location of the interfering radio transmissions as the office and radio shop of a company called Tri-County Communications.

The agents conducted an inspection of radio equipment at Tri-County Communications and interviewed Dale Lloyd Allred who they identified as its chief executive officer. Allred admitted that he had intentionally operated a radio transmitter on 157.5675 MHz to cause the interference that day and on other days as well as at other times. Allred told the agents that he was interfering with Dalton Communications' transmissions, because Dalton Communications had taken the school bus communications contract away from his company.

On October 16, 2008, the Atlanta City Office issued a Notice of Apparent Liability for Forfeiture to Allred in the amount of seventeen thousand dollars. Allred submitted a response to the requesting cancellation or reduction of the proposed forfeiture and at that time changed his

story. He denied that his operation was intentional or that he maliciously caused interference to the school bus communications. Instead he claimed that his equipment was mounted incorrectly in his service vehicle which caused the Push to Talk button to activate when it hit another radio. He also stated that he was intimidated by the police officer who accompanied the agents during the interview and that he would have admitted to anything at the time. He also claimed that a $17,000 fine would produce a financial hardship and provided documentation to back up his claim.

The FCC did not buy his explanation as to how the repeated jamming took place. It noted that Allred does not dispute that transmissions on 157.5675 MHz were sent from his handheld transceiver and sent on more than one day. It says that even assuming that the transmissions were not willful, that he admitted that his operation was repeated. The FCC noted that it need not find his violation of Section 301 of the Act to be willful to assess a forfeiture.

As to the hardship claim? That the FCC did accept. After reviewing the financial documentation that Allred provided, it conclude that a reduction of the forfeiture to $1,500 would be appropriate. It then notified him that he was being assessed that amount.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Allred was given the usual 30 days to pay the fine or to file a further appeal. (FCC)

**

ENFORCEMENT: FCC FINES LOUISIANA BRIADCASTER $15000 FOR FAILURE TO ID

The FCC has fined a Corinth, Mississippi broadcaster $15,000 for failure to transmit legal ID's. It has also refused to let the licensee to pay the forfeiture in six installment payments.

The station in question is WTKN located in the city of Corinth and owned by Perihelion Global. Its trouble began when the FCC inspector out of the New Orleans office found a large hole in the locked gate around the tower and then couldn't reach anybody at the station. It also failed to do its mandatory top-of-the-hour IDs while the agent was on-site at the transmitter.

In it reply, the station requested that it be permitted to pay the fine in six payments. In denying the request the FCC said that Perihelion Global had failed to provide the requested documentation about ability to pay .

One of the morals of the story: You have to pay attention when the FCC comes to visit. (FCC, "Taylor On Radio" newsletter)

**

RESCUE RADIO: THOSE GOOD VIBRATIONS GET THROUGH

With today's cars and light trucks designed to lock out road and traffic noise, how does an emergency vehicle signal a driver to pull over and let him pass. Maybe some good vibrations are the answer. No, we are not talking about the 1960's Beach Boys tune. This is modern technology as we hear from Jim Linton, VK3PC:

--

Just image driving along the road and your car starts to vibrate? Is it an earthquake you think, a service overdue or are the wheels about to fall off?

No, it will be a blast from the latest low frequency howler being fitted to ambulances to augment their traditional lights and sirens. These send pulses of low frequency tones every eight seconds vibrate cars and other things including pedestrians within range of an ambulance on an emergency dash. This will hopefully alert motorists who may be not concentrating on the driving task, perhaps with their car stereo's turned up too loud, or dare we say ... they're on the mobile phone.

The Emergency Medical Services Authority in Oklahoma is among the first to be installing them in ambulances. If they prove successful in reducing delays and intersection accident collision rates of ambulances then we can expect others to fit this latest technology.

I just can't wait to experience the good vibrations.

I'm Jim Linton VK3PC.

--

This is just one of many ideas that engineers are looking at as a way to clear the roads to make way for emergency vehicles when the situation arises. (WIA News)

**

RADIO EDUCATION: BROADCASTERS TO DEVELOP NEW ENGINEERING POOL

Wisconsin broadcasters are committing money to the future to develop new engineering talent. The announcement is from the Wisconsin Broadcasters Association and the W-B-A Foundation says that a new summer intern program has been created and that it will issue up to 10 grants to stations at $2,500 each. This, to cover engineering internship stipends and expenses.

Separately, Fellowship Grants will provide funding for experienced broadcast engineers at member stations to acquire continuing education. The foundation will award five grants of $1,000 to be used for continuing-ed courses in Information Technology networking, engineering leadership and management as well as electrical or transmission engineering.

In either case the money may not be used for trade shows, but factory training does qualify and travel expenses may be covered. Hopefully, other broadcast groups around the country will follow the Wisconsin broadcasters lead and develop similar programs in their geographic regions. (RW)

**

BROADCAST FUN: WKRP IS ON THE AIR - FOR REAL

WKRP is back on the air in Cincinnati, but this time as a TV station.

Several industry news reports say that a low-power TV station has changed its call letters to WKRP. Those are the same call letters used in the 1970's hit series "WKRP in Cincinnati."

Until recently the station went by the call WBQC television. But changed its call letters to promote its new digital TV signal. General Manager Elliott Block says the new call letters give the station recognition because so many people remember the television sit-com.

The station says that its getting a lot of calls, e-mails and letters asking how people can see this 21st century WKRP. According to its website -- www dot wkrp dot com, that's only possible if you live within 15 to 20 miles of downtown Cincinnati. It also says for optimum reception an outdoor antenna is recommended. (Broadcasting OnLine)

**

RADIO HAPPENINGS: RADIO NETHERLANDS ENDS SHORTWAVE TRANSMISIONS TO NORTH AMERICA

According to the new issue Popular Communications Magazinen now on newsstands, Radio Netherlands has decided to end its shortwave broadcasts beamed to North America. This, after a survey showed a decline in listeners to the service.

Programming that used to come via skywave will now be delivered using more modern means. This includes streaming audio on the Internet, satellite transmissions and over the Sirius subscription service.

PopComm notes that many listeners are upset with the Radio Netherlands decision. They say that they do not want to be shackled to a computer to hear the programs that they have been able hear froma shirt pocket sized receiver for years. The full article and other interesting shortwave listening news is on page 8 of the December issues of the magazine. (PopComm)

**

NAMES IN THE NEWS: MUNS TO HEAD CQ RTTY CONTESTS

A name in the news. Ed Muns, W0YK, of Los Gatos, California, has been named Director of 'CQ' magazine's RTTY radioteletype contests. Muns succeeds Glenn Vinson, W6OTC, who has been CQ's RTTY Contest Director since 2000. CQ sponsors the world's two most popular annual RTTY competitions. These are the CQ World Wide RTTY WPX Contest each February and the CQ World Wide RTTY DX Contest held every September. (CQ)

**

THE SOCIAL SCENE: ORLANDO HAMCATION FEB 13 - 15 2009

Turning to the ham radio social scene, 2009 kicks off with the 63rd annual Orlando Hamcation. The dates are February 13th to the 15th.at the Central Florida Fairgrounds in Orlando. Tickets are only $10 at the gate. More information on this winter getaway ham radio treat is on line at www. hamcation.com. (Orlando Hamcation)

**

HAM RADIO ON THE NET: HAMRADIOTUBE.COM

A new website dedicated to ham radio and hobby radio related films is now on line. Called www.hamradiotube.com, the site contains many amateur radio video clips and shows covering the past 70 years. Also there are a large number of videos showing to other aspects of hobby radio including some about 1960's off-shore radio broadcasting. Again the site is www.hamradiotube.com for hours of watching all aspects of hobby radio at its best. (Via e-Mail)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

THE CHANGING OF THE GUARD: GENE HARLAN, WB9MMM - SK

The changing of the guard in amateur radio continues with the sad news out of Rockford, Illinois, of the passing of Eugene Harlan, WB9MMM, reportedly from complications of ALS. ALS is better known as Lou Gehrig's Disease..

Eugene Harlan was best known for his work in amateur television. He ran Harlan Technologies which published the ATV Quarterly magazine for amateur television enthusiasts. The company also provided amateur television gear, accessories along with software and name tags.

Harlan's last major public appearance was in May at the Dayton Hamvention ATV Forum. At that event he was using a motorized scooter to get around.

Memorial services for Eugene Harlan, WB9MMM were not announced. He is survived by his wife Sharon, N9SH. (WB9QZB, AG9D, W9XA)

**

CHANGING OF THE GUARD: CQ'S SCRATCHI - GEORGE FLOYD JR., WA4DGA - SK

George H. Floyd, Jr., WA4DGA of Lynchburg, Virginia, has become a silent Key. Floyd, the former W2RYT, spent more than two decades entertaining thousands of his fellow hams writing as a politically incorrect Japanese American ham with fractured English and used contorted spelling.

From 1947 to 1971 Floyd wrote a letter to the editor of CQ magazine unsung the pseudonym Hashafisti Scratchi. He suppodsedly lived in or near Feenix, Arizona -- spelling the city's name FEENIX. He began each column with "Deer Hon. Ed.," and regularly skewered the pomposity and poor operating practices he encountered on the air. He passed away on November 22nd at the age of 91.

Old time CQ readers are invited to submit reminiscences of Scratchi for a tribute in an upcoming issue of the magazine. A special e-mail address has been set up at scratchi@cq-amateur-radio.com. (CQ)

**

WORLDBEAT - EUROPE: PUBLICIZING HAM RADIO TO THE EUROPEAN PARLIMENT

Amateur Radio is being promoted in the European Parliament. Jeramy Boot, G4NJH, reports from Nottingham, in the UK:

--

An Amateur Radio 2009 Year Planner has been sent to all 785 Members of the European Parliament along with an introductory letter, co-signed by MEP Fernando Fernandez-Martin, EA8AK and IARU Region 1 EUROCOM Working Group chairman Gaston Bertels, ON4WF.

The Year Planner was created by RSGB staff and highlights the use of amateur radio in Space and Emergency Communications, amongst other aspects of the hobby.

I'm Jeramy Boot, G4NJH.

--

Hams across Europe appear to favor his approach of bringing the word of radio amateurs directly to the various government administrations that make the rules governing their operations. (GB2RS)

**

WORLDBEAT - UK: SOS RADIO WEEK FUND RAISER

From the U-K comes word that the Royal National Lifeboat Institution S-O-S Radio Week will be held early next year. The event starts at 00.01 on 24th January 2009 and ends at 23.59 on 30th January.

S-O-S Radio Week is part of the organizations SOS Fund Raising Day. To take part all U-K hams need to do is decide whether you want to operate as a team or on your own. Then, get as many sponsors as you can in the lead up to the event. Once S-O-S Radio Week starts, you make as many contacts as you can and then convert the sponsors and contacts made in to money.

Sound confusing? Not really and all you need to know is on-line at www.sosradioweek.org.uk. (RSGB)

**

WORLDBEAT - BANGLADESH: BANGLADESH RESUMES HAM TESTING

The Bangladesh Telecommunication Regulatory Commission has resumed amateur radio license testing after a gap of four years. A test session was held on November 27th using a computer based testing system that required 18 correct answers of 33 questions on the exam.

A total of 84 candidates took the exam and 62 passed. This equates to 62 new S 21 prefix stations soon to be on the air. The administration of ham radio exams in Bangladesh had been suspended in 2004. (S21RB)

**

ON THE AIR: NI6IW FROM THE USS MIDWAY DECEMBER 7

On the air, listen out for special Event Station NI6IW operating from the USS Midway Museum Radio Room on December 7th. This, in commemoration of Pearl Harbor Remembrance Day.

The station will be on 1700 to 2359 UTC.using C-W, SSB, PSK, MT63 and RTTY on both 40 and 20 meters. The station will include a D-Star radio, connected to the PAPA System D-Star Gateway which will be linked to San Diego Reflector REF012C and can be heard locally on the 145.615, KI6MGN Palomar Mt. D-Star Repeater.

QSL with a self addresses stamped envelope to the USS Midway CV-41 Museum Radio Room, 910 North Harbor Drive, San Diego CA 92101. (W9EN, D-Star Remailer)

**

ON THE AIR: 75th ANNIVERSARY OF FM RADIO

The Major Edwin H. Armstrong Memorial Radio Club will operate special event stations W2XMN and W2XEA, December 13 and 14. This to celebrate the 75th anniversary of the invention of FM radio by Major Edwin H. Armstrong in 1933. The operation is from 1400 to 2200 UTC each day on 7.270 and 14.270 SSB and 29.600 and 52.525 FM. QSL with a self addressed stamped envelope to the Major EH Armstrong FM Association, PO Box 1584, Loxahatchee, FL 33470. (Press Release)

**

DX

In D-X, word that E51QQQ will be on the air from Manihiki Atoll in the North Cook Islands until December 9th. Activity will be on 80 to 10 meters using CW, SSB and possibly digital modes. QSL to JA1KAJ.

A team of six operators from Brazil will show up as ZV5Z or ZV5V from Paz Island. This, from December 6th to the 13th. QSLs direct via PP5CIT.

EP3SMH, has been on from Iran operating on 20 meters RTTY around 1400 UTC. He has been calling for North America on a regular basis. It is suggested to listen carefully because he likes to operate on his calling frequency.

F4EGX, continues to be active as FT5YI from the French scientific station during his free time. He will be there at least until mid-December and try

to be on the air between 2300z and 0200z for North America on or near 14 point 267 MHz. QSL via F4EGX.

Lastly, ON4JM is once operating portable OD5 from the southern part of Lebanon near the city of Tibnin. He will be there until mid-December as part of the Belgian Army to assist the United Nations Forces. QSL to his home call address.

Above from various DX newsletters and other sources.

**

THAT FINAL ITEM: VK HAM WINS JONATHAN LIVINGSTON SEAGULL AWARD

And finally this week, a ham down under has won a prestigious award that can be aid is truly for the birds. But for the birds in a very positive way. We have more in this report:

--

At the annual gala dinner of the Australian Radio Communications Industry Association held at the Melbourne Telstra Dome in front of over 500 people, Peter Young VK3MV, a WIA Director, was awarded the Jonathon Livingston Seagull Award and Perpetual Trophy in recognition of his contribution to the
radio industry in Australia.

The concept of the Jonathon Livingstone Seagull award is to recognise someone who has learned more and risen above what would normally be expected of them in their usual role in the Industry, and then contributed back to the industry in a way that doesn't necessarily relate to their own
direct benefit. This could be through additional training, encouragement of other people to benefit themselves, a contribution that is to the benefit of the community, either as a whole in the context of the radio industry, or perhaps
within their own local community in smaller areas.

The WIA congratulates Peter on this industry recognition, and again acknowledges his contribution to the Australian Amateur Radio community in his capacity as a Director on the WIA Board.

--

Now, a bit of history. If the name Jonathan Livingston Seagull is not familiar to you, then you likely have never been near a small airport or have not had the opportunity to fly in a small, light plane. You see, Jonathan Livingston Seagull is the central character in a book written by a pilot and author named Richard Bach. It is a fable about a seagull learning about life and flight, and a lesson about self-perfection.

The book tells the story of Jonathan Livingston Seagull, a bird who is bored with the daily squabbles over food. Instead he has developed a true passion for flight and dedicates himself to learning everything he can

about flying,

Jonathan's refusal to conform results in his expulsion from his flock. Nonetheless, he continues to educate himself and this leads him to a new level of perfection and knowledge in a new higher plane of existence.

But Jonathan is not satisfied. He has a need to share his wisdom and returns to Earth to find others like him. His mission is successful, gathering around him others who have been outcast for not conforming. Ultimately, the very first of his students, Fletcher Lynd Seagull, becomes a teacher of flight as well.

By the end of 1972, over a million copies of Jonathan Livingston Seagull were in print, Reader's Digest had published a condensed version, and the it reached the top of the New York Times Best Seller list. In fact, it remained for 38 weeks. And in 1973, Jonathan Livingston Seagull was turned into a movie produced by Paramount Pictures Corporation that included an original music score and soundtrack by Neil Diamond. Both the book and the movie are still available from retailers worldwide.

And now you know the story behind the story of the award and the imaginary bird that made it possible. (WIA News, ARNewsline)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,
Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

This is an excellent point.

I don't have any objective technical data either, but I also believe that TVI in the digital TV world will be much less of a problem. I don't know how susceptible the converter boxes are to front-end overload, but at least the frequency difference is greater than it is between the 6-meter ham band and TV channel 2.

73, Steve KB9X

==> ARISS CELEBRATES INTERNATIONAL EDUCATION WEEK

With all the educational opportunities the Amateur Radio on the International Space Station program (ARISS) provides <http://www.rac.ca/ariss/oindex.htm>, it's no wonder that the organization has captured the attention of the US Department of Education (ED). According to ARRL ARISS Program Manager Rosalie White, K1STO, the ED has been tracking ARISS's activities for a long time: "The Department of Education invited ARISS to help celebrate the ninth annual International Education Week (IEW) by coordinating three contacts with the International Space Station (ISS) during IEW, November 17-21 <http://www.iew.state.gov/>. How could we say no?" International

Education Week is a joint initiative of the US Department of Education and US Department of State.

To go along with the theme of this year's IEW -- International Education: Fostering Global Responsibility and Leadership -- White explained that the Department of Education requested ARISS's participation through NASA. "Late last spring, JoAnne Livingston from the Department of Education asked NASA if the ARISS Team could support an ARISS radio contact in conjunction with IEW. The trick for the ARISS Team was to have a successful QSO that tied together three school communities from spots all over the globe into one 10 minute radio contact."

The ED took the initiative of selecting three schools to participate in the contact. Eventually, Enloe Magnet High School in Raleigh, North Carolina, Poolesville High School in Poolesville, Maryland and Academia Cotopaxi, an all-grade school in Quito, Ecuador, were chosen as the three participating schools. "Because of orbital mechanics," White said, "the radio contact was slated for Friday, November 14 at 15:02 UTC as the 'curtain opener' for IEW."

To get these schools ready for their QSO, White looked over the ARRL Affiliated Club roster, searching for clubs to help out the selected schools. "I invited the Raleigh Amateur Radio Society to help support the Enloe Magnet High School. The Goddard Amateur Radio Club, which has many ARISS volunteers, agreed to assist the Poolesville High School." With the help of ARRL Membership and Volunteer Programs Manager Dave Patton, NN1N, White searched for active Ecuadorian hams to assist with the contact with the school there.

"The ARISS QSO is always the headliner for all ARISS activities," White said. "The QSO, via WH6PN, the ARISS telebridge station in Hawaii, allowed students to interview astronaut Mike Fincke, KE5AIT, the current ISS commander. As community leaders and school administrators watched, the radio contact occurred without a hitch, with students walking on air as the day ended. In addition to attracting the eyes and ears of educational organizations, three TV stations were on hand at the Poolesville school to tell their ARISS/IEW story." A video, produced by Gary Pearce KN4AQ, of Amateur Radio//Video News, is also available <http://www.youtube.com/watch?v=6d3D66DbBEo>.

White said that due to the IEW, the three school communities got an education treat: "On November 18, students from all three schools tied in to a videoconference activity held at the US Department of Education auditorium. Students asked questions round-robin style to a panel of experts from around the world. The panel was made up of astronaut Don Thomas, KC5FVF; ARISS Chairman Frank Bauer, KA3HDO, and other ARISS worldwide volunteers and science leaders. Top-level staff from the Departments of Education and State, as well as representatives from educational associations such as the Sally Ride Science Club and the head of NASA Education watched the proceedings."

Each panel member gave a short presentation and participated in a question and answer session with all students. Aside from an overview of ARISS, panelists spoke about unusual ARISS events that have happened in their countries, space exploration and what ham radio activities are popular in their countries. According to White, they also interjected a little of the cultural flavor from their parts of the globe.

Students from the three schools and their lead teachers will not forget their IEW 2008 experiences. Mark Curran, head of Poolesville High School's Science, Math and Computer Program, said his computer students are developing skills for programming a rover to investigate an imaginary planet (Planet Falconia, named for the school mascot). The Research and Engineering Class designed and constructed the rover to successfully navigate hazards, sense differences in surface temperature and recognize boundaries. The Earth Systems Science Class studied planetary geology and remote sensing applications for Planet Falconia. "Through ARISS," Curran said, "students gained insight into daily challenges faced by current astronauts and the importance of the communication efforts including ham radio. Students realized the need to be able to communicate well in both written and spoken languages, addressing the English and foreign language aspects of the curriculum."

Enloe Magnet High School teacher Samuel Wheeler developed special lessons for 11th and 12th grade students in his AP Physics, Honors Physics and Physical Science classes. Enloe is currently ranked 73rd in Newsweek's list of the top 100 United States high schools. Enloe students have exchanged communications with high schools in China, Germany and Turkey through videoconferencing.

Kathy Beahn at the Academia Cotopaxi in Quito, Ecuador, led the effort for pre-kindergarten through 12th grades. Recommended by the US Embassy in Quito for the ARISS QSO, the school teaches an American curriculum. According to White, space-related and ARISS studies were integrated into the Conceptual Physics Course for 11th and 12th grade students, and students in grades 2, 7 and 8 also took part in the ARISS radio contact. "We began the year learning about waves in general, including basics about the electromagnetic spectrum," Beahn said. "This helped students understand ham radio technology. We studied planetary motion and astrophysics topics including special relativity and black holes." Alfredo Caviedes, HC1HC, helped out with the QSO and Rick Dorsch, NE8Z -- a Michigan ham who has been to Quito many times and is friends with Caviedes -- provided translating assistance.

White said that the Department of Education was so impressed with ARISS and with what students learned before, during and after the contacts that ARISS has been invited to participate in next year's International Education Week. IEW 2009 is scheduled for November 16-20.

==> ARRL HQ WELCOMES NEW MEMBERSHIP MANAGER

The ARRL is pleased to welcome Membership Manager Diane Petrilli, KB1RNF, to the Headquarters staff in Newington. Petrilli's key areas of responsibility include programs and activities that directly affect

membership growth, engagement and retention. Petrilli is taking over the position from Katie Breen, W1KRB. Breen left in October.

Petrilli, who earned her Amateur Radio license on her fourth day at ARRL HQ, comes to the League with more than 15 years of experience in marketing and membership management, including nine years with the Connecticut Bar Association. "In my years with the Bar Association, I started out recruiting attorneys to do pro bono work and had the chance to design membership mailings, as well as write for our quarterly publication," she said. "I also designed and managed numerous databases and eventually stepped up to become their Marketing and Electronic Communications Manager." While in that position, Petrilli directed advertising, sales promotions, public relations and electronic media campaigns.

Petrilli said she is excited to be working at ARRL Headquarters: "I am happy to be here and have been made to feel very welcome. I am looking forward to being part of the ARRL family and getting to know our members. While I have quite a bit of experience working in an association setting, I am new to the field of Amateur Radio and so I may be reaching out to many of you in the upcoming weeks. I will be graciously asking for your help -- to share your knowledge, your ideas and passion for the Service. I look forward to meeting you all. As ARRL Membership Manager, I will draw on my experiences in marketing, membership recruitment and retention to build a stronger ARRL."

According to ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R, Petrilli has an extensive background working with association members. "She also has a great deal of relevant experience in recruiting, working with volunteers and developing member benefits," Inderbitzen said. "Diane will join our efforts to serve and grow our vibrant national association. And, there's no better time! Amateur Radio continues to enjoy a resurgence of interest from among prospective and new licensees since license restructuring in 2007. There's a tremendous amount of opportunity for all of us that support ARRL and the Amateur Radio Service."

Inderbitzen said that the ARRL Membership Manager supports regular contact with members, and is also responsible for attracting new members. "All of us here at ARRL Headquarters have a responsibility to get to know our members, to listen to them and to effect positive change," he said.

ARRL Chief Operating Officer Harold Kramer, WJ1B, concurred: "We are pleased to welcome Diane to our staff. With her extensive background in membership organizations, I am sure that she will make a major contribution in providing excellent service to our members. Diane has many years experience in membership organizations. I am confident that she will continue to provide a high level of customer service to the ARRL membership."

Petrilli holds a BS in business administration from Alfred University and an MBA from the University of Connecticut with a concentration in marketing. Calling herself a "fanatical" water skier, Petrilli and husband Christian enjoy swimming, reading (she rates John Steinbeck as her favorite author), gardening, snow skiing and attending concerts.

Petrilli can be reached via e-mail <dpetrilli@arrl.org>.

==> THE JANUARY ISSUE OF QST IS ON ITS WAY!

The January issue of QST -- our annual vintage issue -- is jam-packed with everything today's Amateur Radio operator needs. From product reviews to experiments to contesting, the January issue of QST has something for just about everyone

Our annual vintage issue features an article by Bob Shrader, W6BNB, "When Radio Transmitters Were Machines." Go back to the day when some of the most powerful radio transmitters were RF alternators. If you've ever wanted to build your own vintage radio, be sure to check out "Building a 1927 Regenerative Receiver" by Brian Mattson, K8BHZ. Before the advent of the superheterodyne receiver, the regenerative receiver was all the rage.

Have you ever had an urge to explore Antarctica? If so, be sure to check out the article by Adam Brown, K2ARB. His "Antarctic Experience" as a communications officer at one of the coldest regions on the globe will be sure to warm you up. If Antarctica is a little too close to home, how about Mars? In her article "DXpedition to Planet Mars," former ARRL Youth Editor Andrea Hartlage, KG4IUM, and fellow hams from Georgia Tech experienced a simulated Martian encounter in the Utah desert. While it won't qualify for the Elser-Mathes Cup (given to the hams who complete the first two-way Amateur Radio contact between Earth and Mars), journey with Hartlage as she undergoes life on the red planet.

If you're in the market for a new rig, you don't want to miss January's Product Review of the Elecraft K3/100 HF and 6 meter transceiver. Reviewed by ARRL Technical Editor Joel Hallas, W1ZR, the K3 in any of its available configurations, Hallas says, "provides a high performance, modular and expandable transceiver that can fill the needs of almost anyone looking for an HF and 6 meter transceiver for home or portable use."

If you've been hankering for a new award to proudly display in your shack, look no further than the ARRL's Triple Play Worked All States Award. You will receive this award when you have confirmed contacts (via Logbook of the World) with all 50 states in each of three modes: CW, voice and digital. Look for more information on this new award in this edition of The ARRL Letter.

Of course, there are the usual columns you look forward to in the January QST: Hints & Kinks, The Doctor Is IN, How's DX, Old Radio, Hamspeak and more. Look for your January issue of QST to arrive in your mailbox soon. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of

ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> GET READY FOR THE ARRL TRIPLE PLAY WAS AWARD

As of January 1, 2009, the ARRL will offer another award: The Triple Play Worked All States Award <http://www.arrl.org/awards/#tripleplay>. This new, exciting award is available to all amateurs who confirm contacts with each of the 50 states using three modes for each state: CW, phone and RTTY/digital. All 150 contacts must be made on or after the starting date and must be confirmed via Logbook of the World (LoTW) <http://www.arrl.org/lotw/>. All bands -- with the exception of 60 meters -- may be used in pursuit of the Triple Play Award.

In their July 2008 meeting, the ARRL Board of Directors decided to implement this new award. Based on a suggestion by former ARRL Dakota Division Vice Director Hans Brakob, K0HB, the League's Programs and Services Committee referred the award's parameters to the Board where it received enthusiastic approval.

According to ARRL Chief Executive Officer David Sumner, K1ZZ, the Triple Play Award is a one-time award -- once you have made the required 150 confirmed contacts via LoTW, you're done. "Even so," Sumner writes in "It Seems to Us" in the January issue of QST, "there are many possible variations on the theme. You can try to be the first (or at least the first on your block) or you can set your own pace. Think it's too easy? Limit yourself to QRP while operating your favorite mode (or all three). Maybe you prefer to be the quarry; it will quickly emerge which states are the most difficult to find, offering opportunities to earn the gratitude of your mates by activating the ones you can get to with your portable or mobile rig."

The Triple Play Award is not a contest, but Sumner points out that the ARRL RTTY Roundup <http://www.arrl.org/contests/rules/2009/rtty.html> takes place the first weekend in 2009, with the North American QSO Party (CW and Phone) <http://www.ncjweb.com/naqprules.php> following soon after. "Contesters are among the most loyal devotees of LoTW," Sumner writes, "so participating in these three events should take care of all of the easy states, as well as some of the more difficult ones." He warns that it can be addictive once you begin making your contacts for the Triple Play Award!
The rules for the Triple Play Award state that two-way communication must be established on the amateur bands with each state on each mode (the District of Columbia may be counted for Maryland). There is no minimum signal report required. Contacts must be made from the same location, or from locations no two of which are more than 50 miles apart. Club station applicants must include their club name and call sign of the club station or trustee on their application. The Triple Play Award will be issued on sequentially numbered certificates, starting with #1, as determined by the time stamp of the electronic application as submitted via LoTW. There are no endorsements for this award.

Contacts made through repeater devices or any other power relay method may not be used for WAS confirmation (a separate WAS award is available for satellite contacts). All stations contacted must be land stations; contacts with ships, anchored or otherwise, and aircraft, cannot be counted. The only exception to this rule is permanently docked exhibition ships (such as the Queen Mary) and other historic ships will be considered land based.

Triple Play Award applicants who reside in the US must be ARRL members to be eligible to receive the award. DX stations do not need to be ARRL members.

==> ARISS TO CELEBRATE 25 YEARS OF AMATEUR RADIO IN SPACE WITH SPECIAL EVENTS

Twenty-five years ago this week, Owen Garriott, W5LFL, made history by being the first Amateur Radio operator to talk to hams from space. His historic flight on STS-9 on board the space shuttle Columbia was launched on November 28 and landed on December 8, 1983. Garriott's ham radio adventure on that mission ushered in a host of what Amateur Radio on the International Space Station (ARISS) Chairman Frank Bauer, KA3HDO, called "outstanding outreach activities that continue today with the ARISS program."

Bauer said that many hams still remember that first set of contacts and downlinks with Garriott: "Those first contacts allowed each of us to share the excitement of space exploration through Owen's first-hand eyewitness accounts. Owen's ham radio legacy enabled space travelers that have flown on the space shuttle, the space station Mir and now the International Space Station (ISS) to share their journey of exploration."

Just last month, Garriott's son Richard, W5KWQ, became the first second generation Amateur Radio operator to travel in space and speak with hams <http://www.arrl.org/news/stories/2008/10/17/10392/>. "What other hobby, except Amateur Radio," Bauer wondered, "could or would open the communications lines of space travelers beyond that of the space agencies or international heads of state?"

To celebrate 25 years of Amateur Radio operations from space, ARISS has planned a set of special event opportunities for December and part of January. According to Bauer, a special certificate will be available for those who communicate with the ISS, either two-way direct (with the ISS crew, the digipeater or cross-band repeater) or one-way reception of SSTV or voice downlink. "Several 'surprises' are planned over the month-long celebration," he said, and will be announced soon.

Bauer said that in addition to school contacts and APRS digi-operations, ARISS will configure the radio system for cross-band repeater operations to utilize the standard U/V operations in low power mode during the first week of December. According to Patrick Stoddard, WD9EWK, "U" refers to the 70 cm band used for the uplink to the cross-band repeater, specifically the 437.800 MHz FM frequency (+/- for Doppler), while "V"

refers to the 2 meter VHF band used for the downlink, specifically the 145.800 MHz FM frequency.

Starting December 7, ARISS will then run a test of 9600 baud packet operations on 145.825 MHz."Given that PCsat should be in full sun starting December 9," Bauer explained, "we will switch to 1200 baud packet on 145.825 on December 14-19 to support double hop opportunities. At times, especially during the weekends, you might see some SSTV operations if the crew is available."

Bauer reminded hams that due to ISS flight requirements related to spacewalks and vehicle activity, the radio onboard the ISS may be off for some portion of this schedule. School contacts and general QSO opportunities by the crew will also preempt this schedule for short periods of time. "But remember that if you hear these," Bauer said, "you still qualify for a commemorative certificate!"

==> NOMINATION DEADLINE FOR ARRL INTERNATIONAL HUMANITARIAN AWARD FAST APPROACHING

Nominations are open for the 2008 ARRL International Humanitarian Award. The award is conferred upon an amateur or amateurs who demonstrate devotion to human welfare, peace and international understanding through Amateur Radio. The League established the annual prize to recognize Amateur Radio operators who have used ham radio to provide extraordinary service to others in times of crisis or disaster <http://www.arrl.org/FandES/field/awards/humanitarian.html>.

A committee appointed by the League's President recommends the award recipient(s) to the ARRL Board, which makes the final decision. The committee is now accepting nominations from Amateur Radio, governmental or other organizations that have benefited from extraordinary service rendered by an Amateur Radio operator or group. Amateur Radio is one of the few telecommunication services that allow people throughout the world from all walks of life to meet and talk with each other, thereby spreading goodwill across political boundaries. The ARRL International Humanitarian Award recognizes Amateur Radio's unique role in international communication and the assistance amateurs regularly provide to people in need.

Nominations should include a summary of the nominee's actions that qualify the individual (or individuals) for this award, plus verifying statements from at least two people having first-hand knowledge of the events warranting the nomination. These statements may be from an official of a group (for example, the American Red Cross, The Salvation Army or a local or state emergency management official) that benefited from the nominee's particular Amateur Radio contribution. Nominations should include the names and addresses of all references.

All nominations and supporting materials for the 2008 ARRL International Humanitarian Award must be submitted in writing in English to ARRL International Humanitarian Award, 225 Main St, Newington, CT 06111 USA.

Nomination submissions are due by December 31, 2008. In the event that no nominations are received, the committee itself may determine a recipient or decide to make no award. The winner of the ARRL International Humanitarian Award receives an engraved plaque and a profile in QST and other ARRL venues.

==>SOLAR UPDATE

Tad "Autumn's Sun so warmly gleams" Cook, K7RA, this week reports: This was another quiet week; the geomagnetic indicators hovered around zero and there were no sunspots. There was another unusually quiet period this week on Sunday, Monday and Tuesday (, similar to November 11, November 14, and November 18-24. Sunspot numbers for November 27-December 3 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 68.2, 67, 68.2, 68.4, 68.1, 68.9 and 69.2 with a mean of 68.3. The estimated planetary A indices were 7, 4, 2, 1, 0, 0 and 4 with a mean of 2.6. The estimated mid-latitude A indices were 5, 3, 2, 1, 0, 0 and 4 with a mean of 2.1. Right now on Friday morning, there are one or two sunspots trying to break through. The magnetic activity at our Sun's surface in this area is not quite at a level to indicate a visible spot. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by John Clare's "Autumn" <http://poetry.about.com/od/poems/l/blclareautumn.htm>.

==>IN BRIEF:

* This Week on the Radio: This week, the ARRL 160-Meter Contest on December 5-7. The TARA RTTY Melee and the Wake-Up! QRP Sprint are December 6. The TOPS Activity Contest is December 6-7 and the NAQCC Straight Key/Bug Sprint is December 10. Next week is the ARRL 10 Meter Contest on December 13-14. The NA High Speed Meteor Scatter Winter Rally is December 11-15. The MDXA PSK DeathMatch is December 13-14 and the SKCC Weekend Sprintathon is December 14. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, December 21, 2008, for these online course sessions beginning on Friday, January 2, 2009: Amateur Radio Emergency Communications Level 1, Radio Frequency Interference, Antenna Design and Construction, Technician License Course, Analog Electronics and Digital Electronics. Each online course has been developed in segments --

learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cep@arrl.org>.

* Larry Coyle, K1QW, Wins November QST Cover Plaque Award: The winner of the QST Cover Plaque Award for November is Larry Coyle, K1QW, for his article "A Modular Receiver for Exploring the LF/VLF Bands." Congratulations, Larry! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the December issue by Wednesday, December 31.

* ARRL DXCC Desk Approves Three Operations: ARRL DXCC Manager Bill Moore, NC1L, reports that the following operations have been approved for DXCC credit: Wake Island -- WA2YUN/KH9 (for operations commencing 2007); Willis Island -- VK9DWX (2008), and Andaman and Nicobar Island -- VU4RG (2008). "If you had cards rejected for the Wake Island operation, please send an e-mail to the ARRL DXCC Desk and you will be placed on the list for update," Moore said.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

W0AIH's location, while not completely in the middle of nowhere, isn't exactly under the towers either. Especially for channels 8 and 13.

I wonder if the typical viewer will ever figure out that the intermittent

disappearance of signal is due to the nearby ham?

There is liable to be an uproar. I run 4-811As on 40 and 80 from time to time. There was very little interference at all. Likely broadband noise. Now on DTV it doesn't do anything at all. VHF/UHF is another story. I must have a desense problem. The beam is stacked over the TV antenna with 4 ' vertical seperation.. Now the TV locks up. I don't know what the neighbors are dealing with here. My system is in good condition. Most of the stuff around is Sat or Cable but most of the rest is rust and tangled mass of garbage and I expect they can barely get a picture as it is and will be lashing out in pain when the switch catches them by surprise. Some people are so ignorant about these things. I get a call from a lady every 2 or 3 months asking if she should go out and buy a new TV because her signal went out. She is convinced the DTV switch has already happened. She thinks I'm lying when I tell her DTV and Analog are both being transmitted until Feb so if she has no signal now, a new TV won't fix her problem. People like that you can't even talk to or they will hold you responsible for their problems.

I used to do TV repair, but there is just no money in it. People stand in line at the check-out counter to spend thousands of dollars for a big screen, Blu-ray, Sat system and expect a free hook-up. But when something goes wrong, they are afraid to get burned over $50 so they go out and buy a whole new system. Of course this really means that the people who have money are looking for any excuse to go out and buy new stuff. The rest are waiting for a free toy transistor radio to fall out of the cereal box.

1106. The ARRL Letter, Vol 27, No 48 (Friday, December 5, 2008)

==> ARISS CELEBRATES INTERNATIONAL EDUCATION WEEK

With all the educational opportunities the Amateur Radio on the International Space Station program (ARISS) provides <http://www.rac.ca/ariss/oindex.htm>, it's no wonder that the organization has captured the attention of the US Department of Education (ED). According to ARRL ARISS Program Manager Rosalie White, K1STO, the ED has been tracking ARISS's activities for a long time: "The Department of Education invited ARISS to help celebrate the ninth annual International Education Week (IEW) by coordinating three contacts with the International Space Station (ISS) during IEW, November 17-21 <http://www.iew.state.gov/>. How could we say no?" International

Education Week is a joint initiative of the US Department of Education and US Department of State.

To go along with the theme of this year's IEW -- International Education: Fostering Global Responsibility and Leadership -- White explained that the Department of Education requested ARISS's participation through NASA. "Late last spring, JoAnne Livingston from the Department of Education asked NASA if the ARISS Team could support an ARISS radio contact in conjunction with IEW. The trick for the ARISS Team was to have a successful QSO that tied together three school communities from spots all over the globe into one 10 minute radio contact."

The ED took the initiative of selecting three schools to participate in the contact. Eventually, Enloe Magnet High School in Raleigh, North Carolina, Poolesville High School in Poolesville, Maryland and Academia Cotopaxi, an all-grade school in Quito, Ecuador, were chosen as the three participating schools. "Because of orbital mechanics," White said, "the radio contact was slated for Friday, November 14 at 15:02 UTC as the 'curtain opener' for IEW."

To get these schools ready for their QSO, White looked over the ARRL Affiliated Club roster, searching for clubs to help out the selected schools. "I invited the Raleigh Amateur Radio Society to help support the Enloe Magnet High School. The Goddard Amateur Radio Club, which has many ARISS volunteers, agreed to assist the Poolesville High School." With the help of ARRL Membership and Volunteer Programs Manager Dave Patton, NN1N, White searched for active Ecuadorian hams to assist with the contact with the school there.

"The ARISS QSO is always the headliner for all ARISS activities," White said. "The QSO, via WH6PN, the ARISS telebridge station in Hawaii, allowed students to interview astronaut Mike Fincke, KE5AIT, the current ISS commander. As community leaders and school administrators watched, the radio contact occurred without a hitch, with students walking on air as the day ended. In addition to attracting the eyes and ears of educational organizations, three TV stations were on hand at the Poolesville school to tell their ARISS/IEW story." A video, produced by Gary Pearce KN4AQ, of Amateur Radio//Video News, is also available <http://www.youtube.com/watch?v=6d3D66DbBEo>.

White said that due to the IEW, the three school communities got an education treat: "On November 18, students from all three schools tied in to a videoconference activity held at the US Department of Education auditorium. Students asked questions round-robin style to a panel of experts from around the world. The panel was made up of astronaut Don Thomas, KC5FVF; ARISS Chairman Frank Bauer, KA3HDO, and other ARISS worldwide volunteers and science leaders. Top-level staff from the Departments of Education and State, as well as representatives from educational associations such as the Sally Ride Science Club and the head of NASA Education watched the proceedings."

Each panel member gave a short presentation and participated in a question and answer session with all students. Aside from an overview of ARISS, panelists spoke about unusual ARISS events that have happened in their countries, space exploration and what ham radio activities are popular in their countries. According to White, they also interjected a little of the cultural flavor from their parts of the globe.

Students from the three schools and their lead teachers will not forget their IEW 2008 experiences. Mark Curran, head of Poolesville High School's Science, Math and Computer Program, said his computer students are developing skills for programming a rover to investigate an imaginary planet (Planet Falconia, named for the school mascot). The Research and Engineering Class designed and constructed the rover to successfully navigate hazards, sense differences in surface temperature and recognize boundaries. The Earth Systems Science Class studied planetary geology and remote sensing applications for Planet Falconia. "Through ARISS," Curran said, "students gained insight into daily challenges faced by current astronauts and the importance of the communication efforts including ham radio. Students realized the need to be able to communicate well in both written and spoken languages, addressing the English and foreign language aspects of the curriculum."

Enloe Magnet High School teacher Samuel Wheeler developed special lessons for 11th and 12th grade students in his AP Physics, Honors Physics and Physical Science classes. Enloe is currently ranked 73rd in Newsweek's list of the top 100 United States high schools. Enloe students have exchanged communications with high schools in China, Germany and Turkey through videoconferencing.

Kathy Beahn at the Academia Cotopaxi in Quito, Ecuador, led the effort for pre-kindergarten through 12th grades. Recommended by the US Embassy in Quito for the ARISS QSO, the school teaches an American curriculum. According to White, space-related and ARISS studies were integrated into the Conceptual Physics Course for 11th and 12th grade students, and students in grades 2, 7 and 8 also took part in the ARISS radio contact. "We began the year learning about waves in general, including basics about the electromagnetic spectrum," Beahn said. "This helped students understand ham radio technology. We studied planetary motion and astrophysics topics including special relativity and black holes." Alfredo Caviedes, HC1HC, helped out with the QSO and Rick Dorsch, NE8Z -- a Michigan ham who has been to Quito many times and is friends with Caviedes -- provided translating assistance.

White said that the Department of Education was so impressed with ARISS and with what students learned before, during and after the contacts that ARISS has been invited to participate in next year's International Education Week. IEW 2009 is scheduled for November 16-20.

==> ARRL HQ WELCOMES NEW MEMBERSHIP MANAGER

The ARRL is pleased to welcome Membership Manager Diane Petrilli, KB1RNF, to the Headquarters staff in Newington. Petrilli's key areas of responsibility include programs and activities that directly affect

membership growth, engagement and retention. Petrilli is taking over the position from Katie Breen, W1KRB. Breen left in October.

Petrilli, who earned her Amateur Radio license on her fourth day at ARRL HQ, comes to the League with more than 15 years of experience in marketing and membership management, including nine years with the Connecticut Bar Association. "In my years with the Bar Association, I started out recruiting attorneys to do pro bono work and had the chance to design membership mailings, as well as write for our quarterly publication," she said. "I also designed and managed numerous databases and eventually stepped up to become their Marketing and Electronic Communications Manager." While in that position, Petrilli directed advertising, sales promotions, public relations and electronic media campaigns.

Petrilli said she is excited to be working at ARRL Headquarters: "I am happy to be here and have been made to feel very welcome. I am looking forward to being part of the ARRL family and getting to know our members. While I have quite a bit of experience working in an association setting, I am new to the field of Amateur Radio and so I may be reaching out to many of you in the upcoming weeks. I will be graciously asking for your help -- to share your knowledge, your ideas and passion for the Service. I look forward to meeting you all. As ARRL Membership Manager, I will draw on my experiences in marketing, membership recruitment and retention to build a stronger ARRL."

According to ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R, Petrilli has an extensive background working with association members. "She also has a great deal of relevant experience in recruiting, working with volunteers and developing member benefits," Inderbitzen said. "Diane will join our efforts to serve and grow our vibrant national association. And, there's no better time! Amateur Radio continues to enjoy a resurgence of interest from among prospective and new licensees since license restructuring in 2007. There's a tremendous amount of opportunity for all of us that support ARRL and the Amateur Radio Service."

Inderbitzen said that the ARRL Membership Manager supports regular contact with members, and is also responsible for attracting new members. "All of us here at ARRL Headquarters have a responsibility to get to know our members, to listen to them and to effect positive change," he said.

ARRL Chief Operating Officer Harold Kramer, WJ1B, concurred: "We are pleased to welcome Diane to our staff. With her extensive background in membership organizations, I am sure that she will make a major contribution in providing excellent service to our members. Diane has many years experience in membership organizations. I am confident that she will continue to provide a high level of customer service to the ARRL membership."

Petrilli holds a BS in business administration from Alfred University and an MBA from the University of Connecticut with a concentration in marketing. Calling herself a "fanatical" water skier, Petrilli and husband Christian enjoy swimming, reading (she rates John Steinbeck as her favorite author), gardening, snow skiing and attending concerts.

Petrilli can be reached via e-mail <dpetrilli@arrl.org>.

==> THE JANUARY ISSUE OF QST IS ON ITS WAY!

The January issue of QST -- our annual vintage issue -- is jam-packed with everything today's Amateur Radio operator needs. From product reviews to experiments to contesting, the January issue of QST has something for just about everyone

Our annual vintage issue features an article by Bob Shrader, W6BNB, "When Radio Transmitters Were Machines." Go back to the day when some of the most powerful radio transmitters were RF alternators. If you've ever wanted to build your own vintage radio, be sure to check out "Building a 1927 Regenerative Receiver" by Brian Mattson, K8BHZ. Before the advent of the superheterodyne receiver, the regenerative receiver was all the rage.

Have you ever had an urge to explore Antarctica? If so, be sure to check out the article by Adam Brown, K2ARB. His "Antarctic Experience" as a communications officer at one of the coldest regions on the globe will be sure to warm you up. If Antarctica is a little too close to home, how about Mars? In her article "DXpedition to Planet Mars," former ARRL Youth Editor Andrea Hartlage, KG4IUM, and fellow hams from Georgia Tech experienced a simulated Martian encounter in the Utah desert. While it won't qualify for the Elser-Mathes Cup (given to the hams who complete the first two-way Amateur Radio contact between Earth and Mars), journey with Hartlage as she undergoes life on the red planet.

If you're in the market for a new rig, you don't want to miss January's Product Review of the Elecraft K3/100 HF and 6 meter transceiver. Reviewed by ARRL Technical Editor Joel Hallas, W1ZR, the K3 in any of its available configurations, Hallas says, "provides a high performance, modular and expandable transceiver that can fill the needs of almost anyone looking for an HF and 6 meter transceiver for home or portable use."

If you've been hankering for a new award to proudly display in your shack, look no further than the ARRL's Triple Play Worked All States Award. You will receive this award when you have confirmed contacts (via Logbook of the World) with all 50 states in each of three modes: CW, voice and digital. Look for more information on this new award in this edition of The ARRL Letter.

Of course, there are the usual columns you look forward to in the January QST: Hints & Kinks, The Doctor Is IN, How's DX, Old Radio, Hamspeak and more. Look for your January issue of QST to arrive in your mailbox soon. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of

ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> GET READY FOR THE ARRL TRIPLE PLAY WAS AWARD

As of January 1, 2009, the ARRL will offer another award: The Triple Play Worked All States Award <http://www.arrl.org/awards/#tripleplay>. This new, exciting award is available to all amateurs who confirm contacts with each of the 50 states using three modes for each state: CW, phone and RTTY/digital. All 150 contacts must be made on or after the starting date and must be confirmed via Logbook of the World (LoTW) <http://www.arrl.org/lotw/>. All bands -- with the exception of 60 meters -- may be used in pursuit of the Triple Play Award.

In their July 2008 meeting, the ARRL Board of Directors decided to implement this new award. Based on a suggestion by former ARRL Dakota Division Vice Director Hans Brakob, K0HB, the League's Programs and Services Committee referred the award's parameters to the Board where it received enthusiastic approval.

According to ARRL Chief Executive Officer David Sumner, K1ZZ, the Triple Play Award is a one-time award -- once you have made the required 150 confirmed contacts via LoTW, you're done. "Even so," Sumner writes in "It Seems to Us" in the January issue of QST, "there are many possible variations on the theme. You can try to be the first (or at least the first on your block) or you can set your own pace. Think it's too easy? Limit yourself to QRP while operating your favorite mode (or all three). Maybe you prefer to be the quarry; it will quickly emerge which states are the most difficult to find, offering opportunities to earn the gratitude of your mates by activating the ones you can get to with your portable or mobile rig."

The Triple Play Award is not a contest, but Sumner points out that the ARRL RTTY Roundup <http://www.arrl.org/contests/rules/2009/rtty.html> takes place the first weekend in 2009, with the North American QSO Party (CW and Phone) <http://www.ncjweb.com/naqprules.php> following soon after. "Contesters are among the most loyal devotees of LoTW," Sumner writes, "so participating in these three events should take care of all of the easy states, as well as some of the more difficult ones." He warns that it can be addictive once you begin making your contacts for the Triple Play Award!
The rules for the Triple Play Award state that two-way communication must be established on the amateur bands with each state on each mode (the District of Columbia may be counted for Maryland). There is no minimum signal report required. Contacts must be made from the same location, or from locations no two of which are more than 50 miles apart. Club station applicants must include their club name and call sign of the club station or trustee on their application. The Triple Play Award will be issued on sequentially numbered certificates, starting with #1, as determined by the time stamp of the electronic application as submitted via LoTW. There are no endorsements for this award.

Contacts made through repeater devices or any other power relay method may not be used for WAS confirmation (a separate WAS award is available for satellite contacts). All stations contacted must be land stations; contacts with ships, anchored or otherwise, and aircraft, cannot be counted. The only exception to this rule is permanently docked exhibition ships (such as the Queen Mary) and other historic ships will be considered land based.

Triple Play Award applicants who reside in the US must be ARRL members to be eligible to receive the award. DX stations do not need to be ARRL members.

==> ARISS TO CELEBRATE 25 YEARS OF AMATEUR RADIO IN SPACE WITH SPECIAL EVENTS

Twenty-five years ago this week, Owen Garriott, W5LFL, made history by being the first Amateur Radio operator to talk to hams from space. His historic flight on STS-9 on board the space shuttle Columbia was launched on November 28 and landed on December 8, 1983. Garriott's ham radio adventure on that mission ushered in a host of what Amateur Radio on the International Space Station (ARISS) Chairman Frank Bauer, KA3HDO, called "outstanding outreach activities that continue today with the ARISS program."

Bauer said that many hams still remember that first set of contacts and downlinks with Garriott: "Those first contacts allowed each of us to share the excitement of space exploration through Owen's first-hand eyewitness accounts. Owen's ham radio legacy enabled space travelers that have flown on the space shuttle, the space station Mir and now the International Space Station (ISS) to share their journey of exploration."

Just last month, Garriott's son Richard, W5KWQ, became the first second generation Amateur Radio operator to travel in space and speak with hams <http://www.arrl.org/news/stories/2008/10/17/10392/>. "What other hobby, except Amateur Radio," Bauer wondered, "could or would open the communications lines of space travelers beyond that of the space agencies or international heads of state?"

To celebrate 25 years of Amateur Radio operations from space, ARISS has planned a set of special event opportunities for December and part of January. According to Bauer, a special certificate will be available for those who communicate with the ISS, either two-way direct (with the ISS crew, the digipeater or cross-band repeater) or one-way reception of SSTV or voice downlink. "Several 'surprises' are planned over the month-long celebration," he said, and will be announced soon.

Bauer said that in addition to school contacts and APRS digi-operations, ARISS will configure the radio system for cross-band repeater operations to utilize the standard U/V operations in low power mode during the first week of December. According to Patrick Stoddard, WD9EWK, "U" refers to the 70 cm band used for the uplink to the cross-band repeater, specifically the 437.800 MHz FM frequency (+/- for Doppler), while "V"

refers to the 2 meter VHF band used for the downlink, specifically the 145.800 MHz FM frequency.

Starting December 7, ARISS will then run a test of 9600 baud packet operations on 145.825 MHz."Given that PCsat should be in full sun starting December 9," Bauer explained, "we will switch to 1200 baud packet on 145.825 on December 14-19 to support double hop opportunities. At times, especially during the weekends, you might see some SSTV operations if the crew is available."

Bauer reminded hams that due to ISS flight requirements related to spacewalks and vehicle activity, the radio onboard the ISS may be off for some portion of this schedule. School contacts and general QSO opportunities by the crew will also preempt this schedule for short periods of time. "But remember that if you hear these," Bauer said, "you still qualify for a commemorative certificate!"

==> NOMINATION DEADLINE FOR ARRL INTERNATIONAL HUMANITARIAN AWARD FAST APPROACHING

Nominations are open for the 2008 ARRL International Humanitarian Award. The award is conferred upon an amateur or amateurs who demonstrate devotion to human welfare, peace and international understanding through Amateur Radio. The League established the annual prize to recognize Amateur Radio operators who have used ham radio to provide extraordinary service to others in times of crisis or disaster <http://www.arrl.org/FandES/field/awards/humanitarian.html>.

A committee appointed by the League's President recommends the award recipient(s) to the ARRL Board, which makes the final decision. The committee is now accepting nominations from Amateur Radio, governmental or other organizations that have benefited from extraordinary service rendered by an Amateur Radio operator or group. Amateur Radio is one of the few telecommunication services that allow people throughout the world from all walks of life to meet and talk with each other, thereby spreading goodwill across political boundaries. The ARRL International Humanitarian Award recognizes Amateur Radio's unique role in international communication and the assistance amateurs regularly provide to people in need.

Nominations should include a summary of the nominee's actions that qualify the individual (or individuals) for this award, plus verifying statements from at least two people having first-hand knowledge of the events warranting the nomination. These statements may be from an official of a group (for example, the American Red Cross, The Salvation Army or a local or state emergency management official) that benefited from the nominee's particular Amateur Radio contribution. Nominations should include the names and addresses of all references.

All nominations and supporting materials for the 2008 ARRL International Humanitarian Award must be submitted in writing in English to ARRL International Humanitarian Award, 225 Main St, Newington, CT 06111 USA.

Nomination submissions are due by December 31, 2008. In the event that no nominations are received, the committee itself may determine a recipient or decide to make no award. The winner of the ARRL International Humanitarian Award receives an engraved plaque and a profile in QST and other ARRL venues.

==>SOLAR UPDATE

Tad "Autumn's Sun so warmly gleams" Cook, K7RA, this week reports: This was another quiet week; the geomagnetic indicators hovered around zero and there were no sunspots. There was another unusually quiet period this week on Sunday, Monday and Tuesday (, similar to November 11, November 14, and November 18-24. Sunspot numbers for November 27-December 3 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 68.2, 67, 68.2, 68.4, 68.1, 68.9 and 69.2 with a mean of 68.3. The estimated planetary A indices were 7, 4, 2, 1, 0, 0 and 4 with a mean of 2.6. The estimated mid-latitude A indices were 5, 3, 2, 1, 0, 0 and 4 with a mean of 2.1. Right now on Friday morning, there are one or two sunspots trying to break through. The magnetic activity at our Sun's surface in this area is not quite at a level to indicate a visible spot. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by John Clare's "Autumn" <http://poetry.about.com/od/poems/l/blclareautumn.htm>.

==>IN BRIEF:

* This Week on the Radio: This week, the ARRL 160-Meter Contest on December 5-7. The TARA RTTY Melee and the Wake-Up! QRP Sprint are December 6. The TOPS Activity Contest is December 6-7 and the NAQCC Straight Key/Bug Sprint is December 10. Next week is the ARRL 10 Meter Contest on December 13-14. The NA High Speed Meteor Scatter Winter Rally is December 11-15. The MDXA PSK DeathMatch is December 13-14 and the SKCC Weekend Sprintathon is December 14. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, December 21, 2008, for these online course sessions beginning on Friday, January 2, 2009: Amateur Radio Emergency Communications Level 1, Radio Frequency Interference, Antenna Design and Construction, Technician License Course, Analog Electronics and Digital Electronics. Each online course has been developed in segments --

learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cep@arrl.org>.

* Larry Coyle, K1QW, Wins November QST Cover Plaque Award: The winner of the QST Cover Plaque Award for November is Larry Coyle, K1QW, for his article "A Modular Receiver for Exploring the LF/VLF Bands." Congratulations, Larry! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the December issue by Wednesday, December 31.

* ARRL DXCC Desk Approves Three Operations: ARRL DXCC Manager Bill Moore, NC1L, reports that the following operations have been approved for DXCC credit: Wake Island -- WA2YUN/KH9 (for operations commencing 2007); Willis Island -- VK9DWX (2008), and Andaman and Nicobar Island -- VU4RG (2008). "If you had cards rejected for the Wake Island operation, please send an e-mail to the ARRL DXCC Desk and you will be placed on the list for update," Moore said.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

1107. CB to ham band conversions

Newsgroup: rec.radio.amateur.moderated
Date: 2008-12-07 02:54:45 UTC
From: vk2cjc@gmail.com
Message-ID: <c938ac4b-06e2-4161-b068-487a0ecc7070@r36g2000prf.googlegroups.com>
Source record: 2278

I am looking for a website which has collected together info on converting cb radios to the amateur bands. Not just 11m to 10m conversions, but also more ambitious projects.
If anyone knows af any good sites, let me know. Feel free to contact me direct, details at qrz.com.

Thanks
Jack VK2CJC / MM0AXL

1108. Triple Play Award

See "It Seems to Us" in the January issue of QST.

Who will win award number 0001? How long will it take?

I'm betting it will be a contester, and #0001 will be awarded by March 1st
or earlier.

73, de Hans, K0HB

1109. Amateur Radio Newsline(tm) Report 1635 - December 12, 2008

Newsgroup: rec.radio.amateur.moderated

Amateur Radio Newsline(tm) Report 1635 - December 12, 2008

Amateur Radio Newsline report number 1635 with a release date of Friday, December 12th, 2008 to follow in 5-4-3-2-1.

The following is a QST. Region One of the International Amateur Radio Union suggests contest free operating spectrum, the FCC asks hams to help in the digital United States television conversion, two industry giants say that they will build a national rescue radio system, two friends unite for a space to classroom contact and the tale of ham radio's patron saint. Hear his amazing story on Amateur Radio Newsline(tm) report number 1635 coming your way right now.

(Billboard Cart Here)

**

RADIO REGULATION: THE IARU SUGGESTS SOME WELCOME CHANGES

No-contesting zones and improved QSL procedures are just two of the items discussed at the recent International Amateur Radio Union Region 1 Conference held in Croatia. Jim Linton, VK3PC, has the details:

--

The five-day IARU Region 1 Conference attended by 50 delegates had a packed agenda related to various amateur radio activities - contesting, beacons, QRP, intruder watch and specialized emission modes.

Among other topics were operating procedure, emergency communications, BPL and the promotion of amateur radio.

One conference initiative may see the IARU proposing to the United Nations Education, Scientific and Cultural Organization UNESCO, that it acknowledges the Amateur Radio Service as an activity to be protected.

The QSL'ing practices of some DX stations were discussed. The conference resolved to encourage QSL managers of DXpedition, DXCC, IOTA or other stations to accept both direct and Bureau QSL cards.

It was also recommended that contest-free band segments be included in rules of contests organized by national societies, and where possible, contests include a category for youngsters and newcomers.

For the Amateur Radio Newsline, I'm Jim Linton, VK3PC.

--

Meantime the conference also reported that all is now in place for the expansion of the 40 meter band. This very useful HF spectrum will double in size in many parts of the world on the 29th of March. (WIA News)

**

EMERGING TECHNOLOGY: FCC ASKS HAMS TO ASSIST IN FEBRUARY 2009 DTV CONVERSION

Hams across the United States are being asked by the FCC to assist in the upcoming conversion of all television broadcasting to digital operation. This, as the ARRL reports that it has received a request from the regulatory agency asking its members to provide technical educational assistance to their communities concerning the FCC-mandated digital television conversion scheduled for February 17, 2009.

According to ARRL Media and Public Relations Manager Allen Pitts, W1AGP, Amateur Radio clubs across the country are being asked to develop and implement plans to provide information throughout January and February about the Digital Television conversion in their geographic areas. The FCC is leaving it up to the clubs to decide how to do this because they believe that local groups understand the communities in ways that the FCC does not.

Pitts said that in early January the FCC will ask ARRL Section Managers for the names and contact information of the volunteering groups. The FCC staff will then make contact with the groups, learn their plans and provide them with the media, brochures or other materials that groups and clubs may need in this effort. FCC regional staff members may even visit with larger organizations to aid in implementation of the group's plans.

Pitts stressed that hams should not make "house calls," sell any equipment
or do actual installations. The request is only to distribute technical information and FCC materials only. In other words you are not to do anything other than hand out literature and answer questions. Nor can you charge anyone for your time or effort as this is a volunteer undertaking.

Interested groups should contact their ARRL Section Manager. More information on this request from the FCC is on line on the ARRL newspages at www.arrl.org. (ARRL)

RESCUE RADIO: GSS AND NORTHROP GRUMMAN TO BUILD NATIONAL EMCOMM ALERT SYSTEM

Global Security Systems and Northrop Grumman say that they are working together to offer an integrated emergency alert system. One that they hope will be deployed all across the United States by homeland security officials. Amateur Radio Newsline's Bruce Tennant, K6PZW, is here with the details:

--

According to a news release the system is designed to cover any emergency situation at any level. It says that in the event of a war, natural disaster, national, regional or local emergency the combined systems will allow the president, state and local officials, critical infrastructure and emergency management agencies to seamlessly and immediately communicate with first responders as well as citizens. This using any and all forms of personal communications devices such as cellular phones, wireless Personal Digital Assistants and permanently installed two-way enabled entertainment systems.

Northrop Grumman will build a national, state and local alert and warning system that uses wireless communications infrastructure and consumer devices. Global Security Systems will contribute expertise in local collection and delivery of emergency messages and its experience in deploying its Alert FM system.

The two companies believe they can offer an all encompassing national alerting framework that spans agencies and levels of government at all levels while benefiting from an installed base at emergency operations centers. They also contend that this system will provide an access point to involve mobile service providers and device integration labs.

According to the announcement, the Alert FM technology allows warnings to be sent to geographically specific areas and the control processor chip can be designed into common devices such as cell phones, pagers and even smoke detectors. It will be interesting to see if any ham radio manufacturer decides to integrate Alert FM into the next generation of ham radio gear or if they will be licensed by the technology's patent holder to do so.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles

--

The bottom line: While the FCC tries to find a way to make money selling off spectrum to companies to use to build a non money making national emergency alert and communications network, two corporations have decided to take the initiative on their own. (RW)

**

COMMUNICATIONS LAW: FCC CHAIRMAN MARTIN UNDER CONGRESSIONAL FIRE

A year-long Congressional investigation of Federal Communications Commission Chairman Kevin J. Martin is alleging egregious abuses of power. However it was unclear whether the nation's top telecommunications regulator broke any rules or laws during his leadership.

The report released on Wednesday, December 10th is titled "Deception and Distrust." It was led by Representatives. John D. Dingell who is Chairman of the Committee on Energy and Commerce, and Bart Stupak the Chairman of the Subcommittee on Oversight and Investigations. The report alleges that the FCC's Martin suppressed information and manipulated data to serve his agenda.

For some time, Chairman Martin has been criticized by his own FCC staff members for pushing his proposals to free up media ownership rules and pushing requirements for a la carte pricing of cable television. This, through such tactics as suppressing agency studies that do not support his plans.

FCC spokesman Robert Kenny said that the agency's review of the report indicated the it did not violate any rules, laws or procedures, but Congress will ultimately have the final say in this matter. (W8HDU, others)

RADIO LAW: A DECISION IN THE MILLS TOWER CASE

A zoning board in a Pennsylvania suburb has rendered its decision on the fate of a tower owned by Chuck Mills, W3YNI. Amateur Radio Newsline's Mark Abramowicz, NT3V, has been following the matter and has the latest:

--

By a vote of 5-0, the Penn Township Zoning Hearing Board in southwestern Pennsylvania voted to uphold the permit issued to W3YNI for a 53-foot-tower on his property.

"I'm very eager to continue my hobby and continue to serve the community when I'm called upon to do so."

That's Chuck Mills in a telephone interview with Amateur Radio Newsline immediately following the board's decision.

Mills has been battling neighbor John Ducar who simply didn't want a ham radio tower erected next to his property.

Mills says he did everything the township asked him to do, including provide proper screening. But it was PRB-1 and Pennsylvania's recently enacted tower law called Act 88 which bolstered his case.

While Ducar has the right to appeal, Mills says he's hopeful this battle has come to an end.

"I've learned to never say never, but I'm optimistic at this point that this will be the end of it," Mills says.

Michael Lazaroff, K3AIR, a volunteer American Radio Relay League legal counsel, has been with Mills throughout the process. He says Pennsylvania's new, ham-friendly tower law, went into effect Dec. 8, just three days before the board's decision was issued.

"To the best of my knowledge, this is the first case that's been considered under Act 88 of 2008 and if so, it's very good news," Lazaroff says.

As for Mills' neighbor, Lazaroff says, he, too, is confident the dispute has come to a legal end.

"He appears to be rather upset that the zoning hearing board ruled against him," Lazaroff says. "He does have the right to file an appeal with the county common pleas court. He has 30 days to do so. However, the standard of review is pretty strict.

"If he appeals, in order to prevail, he will have to prove that the township zoning hearing board either abused their discretion or made an error of law in denying his appeal. I don't believe he can prove either point."

Lazaroff says it's time to move on.

"I'm hoping that this neighbor will finally realize that it's over and he needs to move on with his life and get over it," Lazaroff says.

The attorney says the decision actually has much broader implications.

"This is an important decision, an important victory for private property rights and for PRB-1 and Act 88," Lazaroff says. "We've seen in this country a very steady erosion of private property rights in the last few years. And, I'm glad to see that at least in this case that that erosion has come to a stop."

For his part, Mills says he has been very appreciative of the backing received from hams in his area and throughout the country.

"Support from the ham community was tremendous both in terms of moral support, financial support, and just a collective 'Thank you' to all of them," Mills says.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia

--

This is not the only tower and antenna issue being faced by hams. We will have more for you on them in future Amateur Radio Newsline reports. (ARNewsline(tm), NT3V)

**

ENFORCEMENT: THE $51,500 FAX FINE

Another heavy fine for sending out unsolicited fax's. This, as the FCC notifies Hot Lead LLC of Addison and Plano Texas and Las Vegas, Nevada of its Apparent Liability for Forfeiture in the amount of $51,500 for delivering at least nine unsolicited advertisements to the telephone facsimile machines of at least nine consumers. That works out to be a fine of $5722 per unsolicited fax. The company was given the customary 30 days to pay or to file an appeal. (FCC)

**

ENFORCEMENT: YOU HAVE TO PUT IT IN PRINT

The FCC has also notified Multi-Tech Systems, Inc. of its Apparent Liability for Forfeiture in the amount of $4,000. This, for marketing a radio frequency device without including the required consumer disclosure in the user manual.

Multi-Tech is a manufacturer of communications and device networking products that provide voice and data services over internet protocol networks. One of its products, the CallFinder Global System for Mobile Communications is a cellular gateway that enables users to connect to a private branch exchange trunk line, PBX extension line, or a single public switched telephone network line and route incoming and outgoing calls through a GSM wireless network.

Because the CallFinder is a Class A digital device, Multi-Tech must verify that it complies with the requirements contained in Part 15 of the Rules and must distribute it with a customer notice informing users of the potential for harmful interference. It failed to do the latter and that's the reason for the proposed $4000 fine. (FCC)

**

RESCUE RADIO: HAMS IN SCOTLAND PROIVIDE EMCOM AT CAR CRASH

A family in Scotland left stranded with at least one person injured when their car skidded off a rural country road has been rescued. This thanks to the quick thinking of two United Kingdom amateur radio operators.

The drama unfolded Friday morning, December 5th. That's when Barry Horning, GM4TOE, came across the couple and their three children ina wreck on the Dufftown-Tomintoul road. Unable to get a cellular telephone phone signal near the accident scene, GM4TOE took to ham radio for medical assistance for the injured female driver.

Using the services of a local repeater, Horning's plea was picked up 20 miles away in the town of Longmorn by Jon Coulter. Coulter, who was not identified by call sign notified police and gave them the information needed for an emergency medical response. A short time later an ambulance arrived at the accident scene to provide on site treatment and then transported the victim to a local medical facility.

According to Horning the ambulance crew was impressed by the way he and Coulter were able to provide them exact coordinates for the accident site. They told him that it saved them a lot of time in responding to the scene.

Coulter says that he's not heard from Horning since the QSO to report the accident so he has no word on the current condition of those who were injured in the mishap. (Northern Scot)

**

RESCUE RADIO: WICHITA KS. NEWSPAPER HONORS SKYWARN

The Wichita, Kansas Eagle newspaper has recognized the key role that ham radio operators play in providing an early warning of approaching severe weather. In its December 7th story titled Skywarn volunteers see what radar can't the paper notes that when severe weather threatens the region, dozens of volunteer amateur radio operators and weather spotters work together to provide information to the Weather Service. Writer Tim Potter calls the Skywarn hams the eyes on the ground for the National Weather Service in Wichita. In the Wichita region, Skywarn covers 26 counties. The article is on-line at http://www.kansas.com/news/state/v-print/story/623024.html (Kansas.com)

**

RESCUE RADIO: RENO TV STATION HONORS HAM RADIO EMCOMM

Ham radio operators providing emergency communications was also the theme of a 2 minute news report over NBC television affiliate KRNV in Reno Nevada. One of those featured was Amateur Radio Newsline's Don Carlson, KQ6FM., who explained to reporter Lemor Shlomof the way in which hams helped loved ones learn about the health and welfare in a disaster area. The story also featured Jack Goetz, WA2FDK, who has been a ham since 1934 reminiscing about the old days of the hobby. This was a very positive story about ham radio at a truly fun time of year. Our thanks to KRVN for permission to use the audio clips heard in this report. (KRNV)

**

NAMES IN THE NEWS: GET WELL WISHES TO WA6MHZ

Get well wishes to past ARRL San Diego Section Manager Pat Bunsold, WA6MHZ, who is and is recovering from heart surgery. Pat was operated on last Thursday at haro Grossmont Hospital in La Mesa California. Hes now at home and those that know Pat are well aware that he particularly enjoys discussing vintage radio and even runs a ham radio museum at his QTH. Get well wishes can go to WA6MHZ at his Callbook address or e-mail listed on QRZ dot com. (CGC Communicator)

**

HAM AWARDS: THE LEWIS AND CLARK AWARD PROGRAM

The Pacific Northwest V H F Society has announced the creation of its new Lewis and Clark awards program. The goal is that of promoting V H F and U H F activity throughout the Pacific Northwest. The awards and certificates of this program are specific to the culture and pioneering spirit of rams residing in the North-Western states. However, the sponsors say that with modern communications technology it should also be obtainable by radio amateurs outside of that local geographic region. More information is on the society's webpage at www.pnwvhfs.org (VHF Reflector)

**

HOLIDAY RADIO: OPERATION SANTA CLAUSE IN SOCAL

Operation Santa Clause has begun. This as members of California's Moreno Valley Amateur Radio Association, provided an opportunity for children to ï¿½Talk to Santa' via amateur radio at the 10th annual Lake Perris State Recreation Areaï¿½s, ï¿½Lights on the Lake' holiday season celebration, held on
Saturday, December 6th.

Some 15 members of the Moreno Valley club participated along with members of the City of Moreno Valley RACES organization. Each child received a name tag identifying their radio contact and entitling them the opportunity to personally meet Santa following the evening finale of the parade of boats.

Alan Pearson, KB6DMZ, is a spokesperson for the club. He says that the overall success of the event was gauged by the long lines of children making their Christmas wishes known to Santa at the groups lakeside amateur radio station. (AF6HR)

HAM RDIO IN SPACE: AN ARISS CONTACT BETWEEN FRIENDS

Its not often when two friends hold a space to ground Q-S-O so that the one on-orbit can talk top kids in a classroom. But that's what happened so that students at a southern Illinois grade school could get their chance to vicariously go into space. Amateur Radio Newsline's Bill Pasternak, WA6ITF, is in the newsroom with the details:

--

Monday, December 8th was just another day at the Ellis Elementary School in Belleville, Illinois. The students came to class. They got their daily education. And oh yes, they also got to talk to Astronaut and Flight Engineer Sandra Magnus, KE5FYE, on board the International Space Station. Take a listen:

--

Student: "My name is Austin. What was the first thing you did when you got into space?"

KF5FYE: "You know Austin, the first thing I did was also the most fun. I actually opened up my seatbelt and let myself float out of my seat and that's how I knew I was back on orbit. Over."

--

The QSO between Ellis Elementary and Sandra Mangus was a direct contact. It was made possible by ARISS -- amateur Radio on the International Space Station in conjunction with the Saint Clair Amateur Radio Club of nearby Saint Louis, Missouri. Its callsign K9GXU was used to establish contact with KE5FYE who was operating from the space station as NA1SS:

--

Control Station: "NA1S, NA1SS, this is K9GXU, over."

KF5FYE: "K9GXU, this is NA1SS. How do you copy?"

Control Station: "We've got you perfect."

--

Once the two way circuit was established the real fun began. This, as student after student quizzed KF5FYE on what it was like to ride to orbit and live on board the I-S-S:

--

Student: "Hi, my name is Ashley. How long does it take to get from Earth to the ISS?"

KF5FYE: "Ashley, the ISS is only up about 200 to 250 miles but we use about three days to get here because of the way that the shuttle flies to the station. So I'm really not that far away. Over."

Student: My name is Allison. "How funny do you think a bird would look if it was flying inside the
ISS-would it fly like a bird on Earth?"

KF5FYE: "Well Allison, that's a good question because I don't know what kind of sensors that birds have that sense gravity. In the environment (here) there is air it can fly in but I don't know how it would feel without gravity. Over.

Student: "My name is Felix. What are some of the fun experiments you are doing?"

KF5FYE: "Well Felix, my most fun one I am watching. We have a couple of spiders up here and they are learning how to build webs in zero gravity. As a matter of fact, you guys sent us the names for the spiders -- Elmo and Spiderman. And thank you for that., over."

--

On hand to record the event was ham radio's own Mr. Audio, Bob Heil, K9EID. After the contacts were concluded Bob got a chance to chat with the third grade teacher spearheading the project. She is Jennifer May who just happened to be a longtime friend of Flight Engineer Sandy Magnus, KE5FYE:

--

K9EID: "How great was this for you today"

May: "Oh this was wonderful. The children have been working on this for the past couple of weeks. They formed their questions. They had everything prepared. They decorated the room and they really enjoyed themselves and especially hearing Sandy on the radio.

K9EID: "You and Sandy have been friends for a couple of years, as I understand."

May: "Yes, we have."

K9EID: "How long have you been working together on this project?"

May: "Its not just this project. We've been pen-pals and friends for about 13 years.

K9EID: "It has to have been real exciting?"

May: "Yes. Especially to see all of the and the (antennas) go on top of the roof and everybody working together. We could not have pulled this off without everyone."

--

Bob also got a chance to speak with the ham radio operator who made the technical end of the contact happen. Chris Pixson, KC9EIZ:

--

K9EID: "Chris, what did you thing of this operation?"

KC9EIZ: "Well, the fact that it was successful was the most important thing and not for the amateur radio side. Rather for the 26 third graders at the Ellis Elementary School who had a once in a lifetime experience of talking to the International Space Station.

"The amateur radio gear that we had worked flawlessly and the hundreds and hundreds of man hours that were put in by amateurs to make this happen is the key to the success of this whole endeavor."

--

Not only was this contact between the Ellis Elementary School an overwhelming success, the kids even learned how Santa Clause gets to space. Well at least how Christmas presents get there:

--

Student: "My name is Tim. Since you are going to be on the ISS for Christmas, how are you going
to get your presents?"

KF5FYE: "Tim, actually, our presents arrived on the last Progress vehicle last Sunday, but I haven't opened them.. I'm going to wait until Christmas to open them so it will be a surprise. Over."

--

And on that happy holiday note we say well done to all who made this ARISS contact both a fun and educational time for the students at the Ellis Elementary School, in Brellville, Illinois.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.

--

Our sincere thanks to Bob Heil, K9EID, of Heil Sound Limited for recording the event and making the sound available to us for this story. (ARNewline(tm) with audio provided by K9EID)

**

WORLDBEAT: NEW EUROPEAN DRM SERVICE LAUNCHES IN 2009

Early 2009 is the target for a new joint radio service that will serve European audiences on shortwave using Digital Radio Mondiale technology. That's when the BBC World Service and the English-language division of Deutsche Welle will begin targeting Western and Central Europe, with digital content that will include global news and current affairs, analysis, documentaries and cultural programs.

BBC World Service is a U.K.based international radio and online broadcaster; Deutsche Welle is Germany's international broadcaster. Digital Radio Mondiale was developed in Eueope as the digital broadcasting system for bands below 30 MHz. With the exception of North America where In Band On Challel or IBOC is trying to gain a foothold, Digital Radio Mondiale has been almost universally embraced worldwide as the preferred medium for broadcast services to use on these bands. (RW)

**

DX

In DX, WJ2O, will once again be active from VP5JM's location on Providenciales Island during the ARRL DX CW Contest on February 21st and 22nd. His call will be VP5DF and he will operate as a single-operator all-band entry. QSL via his home callsign

And Japanese special event station 8J1UEC90 is on the air until 12th January. This, in commemoration of the 90th anniversary of the University of Electro-Communications. QSL only via the bureau.

The 4M5DX Group will activate Toas Island from December 9th to the 12th using CW, SSB and RTTY on 160 through 6 meters. QSL via IT9DAA, either direct or via the bureau.

Lastly, listen out for G7OCD operating from the Maldives as 8Q7AK from January 11th to the 27th. This will be his fifth time on from that location and he plans to operate 40 through 10 meters on SSB and CW every day. Times are approximately 0730 to 0830, 0900 to 1030, 1300 to1500 and 1730 to 1800 hours UTC. For QSL information please check 8Q7AK- on QRZ dot com.

(Above from various DX news sources)

**

THAT FINAL ITEM: THE SAINT OF AMATEUR RADIO

And finally this week, the story of a ham radio operator who was killed by the Nazi's during World War 2. Graham Kemp VK4BB, is here with the story of SP3RN:

--

GI70MY writing in the 30 meter psk yahoo group says that during the WW2 German occupation of Poland, a Ham radio Priest, Fr. Maximilian Kolbe, SP3RN was arrested by the Germans. The Germans believed his amateur radio activities were somehow involved inespionage and he was transferred to Auschwitz on May 28, 1941.

After some prisoners escaped in 1941, the Germans ordered that 10 prisoners be killed in retribution.. Fr. Kolbe was martyred when he volunteered to take the place of one of the condemned men.

On October 10, 1982 he was canonized by Pope John Paul II as Saint Maximilian Kolbe, Apostle of Consecration to Mary and declared a Martyr of charity. He is now considered the Patron saint of Amateur Radio Operators.

For the Amateur Radio Newsline, I'm Graham Kemp, VK4BB, of the WIA News in Australia.

--

A bit of history about a ham who truly cared about his fellow man. One who cared enough to forfeit his own life to save another. (WIA News)

==> CONGRESSIONAL COMMITTEE MEMBERS RELEASE REPORT LAMBASTING FCC CHAIRMAN KEVIN MARTIN

On Tuesday, December 9, the House Committee on Energy and Commerce -- the congressional committee that oversees the Federal Communications Commission -- released its majority staff report "on the bipartisan investigation of the FCC's regulatory processes and management practices." The report -- "Deception and Distrust: The Federal Communications Commission under Chairman Kevin J. Martin" -- stated that

the investigation was prompted "by allegations to the effect that [FCC] Chairman Kevin J. Martin has abused FCC procedures by manipulating or suppressing reports, data and information" <http://www.arrl.org/news/files/FCC_Report120908.pdf>.

"Our investigation confirmed a number of troubling allegations raised by individuals in and outside the FCC," said Representative Bart Stupak (D-MI), Chairman of the Subcommittee on Oversight and Investigations. "The Committee staff report details some of the most egregious abuses of power, suppression of information and manipulation of data under Chairman Martin's leadership. It is my hope that this report will serve as a roadmap for a fair, open and efficient FCC under new leadership in the next administration."

Representative John D. Dingell (D-MI), Chairman of the Committee on Energy and Commerce echoed Stupak's concerns: "Any of these findings, individually, are cause for concern. Together, the findings suggest that, in recent years, the FCC has operated in a dysfunctional manner and Commission business has suffered as a result. It is my hope that the new FCC Chairman will find this report instructive and that it will prove useful in helping the Commission avoid making the same mistakes."

The report said that "in an investigation of this nature," the Committee would usually hold hearings "to receive testimony from witnesses and to further examine the issues." But due to what the Committee called "the climate of fear that currently pervades the FCC," the report said the Committee found that key witnesses "were unwilling to testify or even have their names become known." For that reason, they issued a report in place of a hearing "to protect the many honest people who came forward under a promise of protection or anonymity." Chairman Martin was invited to meet with the Committee to discuss matters addressed by the investigation, but the report said he "ignored [the Committee's] invitation," as did his Chief of Staff Daniel Gonzalez and Chief of Public Safety and Homeland Security Bureau Derek Poarch.

In its 110-page report, the Committee described 12 allegations, ranging from retaliation against FCC employees who differed with the Chairman's policies to enhanced 911 wireless services to broadband over power lines (BPL). To go along with the 12 allegations, 22 exhibits were attached to the report, such as internal e-mails, e-mails from FCC commissioners to their staff, statements made by FCC commissioners and letters to and from commissioners (including Chairman Martin). Not all 12 allegations were substantiated by the Committee.

* Broadband over Power Lines

Concerning BPL, the report alleges that FCC officials "ignored complaints of radio frequency interference caused by BPL high-speed Internet technology, delayed an enforcement investigation for two years and improperly withheld engineering data regarding BPL from the public."

The report found that in October 2004, as then-Chairman Michael Powell issued his final rule "defining BPL access and setting technical and administrative requirements to protect licensed radio operators from harmful interference," the FCC "withheld from the public certain engineering reports on which it relied in promulgating the rule" from the final rule and order.

Even though the BPL rules were adopted during Powell's tenure, the report found that "it was under Chairman Martin that the Enforcement Bureau and the General Counsel continued to withhold the redacted engineering reports and insisted on doing so in the course of the ensuing litigation [with the ARRL]" <http://www.arrl.org/news/stories/2008/04/25/10064/>.

The report goes on to say that on April 25, 2008, the US Court of Appeals for the DC Circuit found that the FCC, in the case filed by the ARRL, "violated the Administrative Procedure Act when it played 'hide and seek' with engineering data used in its support of the order and 'cherry-picked' a study on which it had relied" <http://pacer.cadc.uscourts.gov/common/opinions/200804/06-1343-1112979.pdf>.

"The fact that the FCC withheld the required engineering reports in this matter," the report concluded, "indicates poor judgment and an attempt to hide critical weaknesses in its decision. Ironically, the FCC's attempts to hide this information only served to provoke suspicion and its handmaiden, litigation. This case [filed by the ARRL] illustrates the extent to which a culture of secrecy has developed at the FCC that is as counterproductive as it is unnecessary." The report states that this "particular situation" has been corrected by the courts and technological issues arising from BPL have been "rendered largely moot over time due to improvements" in BPL technology.

"It is distressing, but unfortunately not surprising," said ARRL Chief Executive Officer David Sumner, K1ZZ, "to read that the FCC's mishandling of the BPL issue was simply a part of a broad pattern of dysfunction at the Commission. This is a relatively recent development and is unprecedented in the ARRL's long experience with the FCC -- an association that dates back to the very creation of the agency, 20 years after the founding of the ARRL. While the marketplace failure of BPL and the steps taken voluntarily by the few companies that have deployed BPL systems have combined to minimize interference, the regulatory issue is by no means moot. The rules remain inadequate."

Sumner continued: "More than seven months after the Court remand, the FCC has done nothing to correct its errors, nor has it complied with the very specific instructions from the United States Court of Appeals. These instructions included the disclosure of the studies that it intentionally withheld from the public, but upon which it relied in adopting its rules. Indeed, the only step the Commission has taken since the Court's remand order is to mount an unsuccessful effort to oppose our claim for reimbursement of the printing costs for the briefs in the case -- a small fraction of the expenses incurred by the ARRL in our

appeal -- expenses that would not have been necessary had the Commission followed the law in the first place" <http://www.arrl.org/?artid=8338>.

* Other Findings by the Committee

The report also showed instances of where Chairman Martin "manipulated, withheld or suppressed data, reports and information," and said Martin's "manipulation [of another report] may have damaged the credibility of the Commission, and certainly undermined the integrity of the staff. Moreover, it was done with the purpose of affecting the congressional decision-making, in that it was issued as a report to Congress."

Saying that FCC matters have not been handled in an "open or transparent manner," the report said the FCC "rais[ed] suspicions both inside and outside the Commission that some parties and issues are not being treated fairly." The report stated that the Committee's impressions were "confirmed" when it discovered that Chairman Martin made a "preemptory reversal" of [a report's] conclusions and that Martin did not seek "further public comment or conduct further studies" thus giving the impression "that the issue was not handled fairly or openly."

The report also found that Chairman Martin's "heavy-handed, opaque and non-collegial management style has created distrust, suspicion and turmoil among the five current Commissioners." The report states that Martin does not afford his fellow Commissioners "direct and unfettered access to the Commission staff and their expert advice, thereby hindering the ability of other Commissioners to carry out the duties of their offices and the work of the Commission."

The report also found that Commission staff have not been "effectively managed." When Martin first became Chairman, he "imposed a major reshuffling of FCC staff throughout the agency." While the report said that a "certain amount of reorganization is not unprecedented" when a new Chairman begins his term, the reorganization "was highly unusual in both its breadth (nearly every senior position at the agency changed hands) and its depth (even a number on non-management line staffers found themselves inexplicably reassigned)." Calling it a "waste of resources, the report pointed out that senior employees with "extensive experience and expertise" were reassigned to junior-level positions; as a result, "it appears that some important Commission proceedings were delayed."

* Committee Methodology

Over the course of its investigation, the Committee staff reviewed "several hundred thousand documents, including 95 boxes of paper documents; conducted 73 interviews of current and former FCC employees and individuals associated with the telecommunications industry; solicited and received e-mails from FCC employees and contractors at a secure e-mail address established for this purpose, and reviewed dozens of allegations." The report pointed out that since the investigation, Chairman Martin has taken "some small steps" to address some of the

problems outlined in the report.

The Committee also emphasized that not everything they found is included in its report: "A few allegations were received so recently that they have not been investigated and are not included [in the report]. We have also excluded matters that seemed trivial per se. Still, other allegations have not been adequately investigated because the FCC has not yet produced all of the records requested by the Committee."

==> ARRL 10 METER CONTEST MEANS HF FUN FOR TECHNICIANS, TOO!

This weekend brings an opportunity for Technician licensees to exercise their HF privileges and have fun at the same time. The ARRL 10 Meter Contest is set to begin at 0000 UTC on Saturday December 13 (this is Friday evening in the US) and runs through 2359 UTC on Sunday, December 14 <http://www.arrl.org/contests/rules/2008/10-meters.html>.

"Anyone having tuned across 10 meters lately might think the band is uninhabited," said ARRL Contest Branch Manager Sean Kutzko, KX9X, "but on Friday afternoon, activity will increase dramatically. We're at the bottom of the solar sunspot cycle, so the worldwide band openings of a few years ago won't be happening, but the 10 Meter Contest brings hundreds -- or more! -- of stations to the band."

Kutzko said that the contest "concentrates the activity, so all sorts of interesting contacts take place via local line-of-sight, sporadic-E and all kinds of scatter modes -- even meteor scatter!"

If you would like to try your hand at HF operating, Kutzko recommends a radio that can operate SSB (and CW, if you know Morse code) from 28.000 to about 28.500 MHz, as that's where most of the contest activity takes place; SSB activity will be between 28.300-28.500 MHz (listen to beacon stations located between 28.200-28.300 MHz to check for band openings).

If you need an antenna for 10 meters, ARRL Contributing Editor H. Ward Silver, N0AX, suggests using a full-size CB mobile whip trimmed to about 98 inches in length, but a dipole is also easy to make, he explains: "Cut two pieces of wire (any size from #12 to #20) to a length of 98 inches and strip the end of a piece of RG-8X or RG-213 coax. Solder the shield braid to one length of wire and the center conductor to the other. Stretch out the wires and attach each free end to an insulator, such as a piece of PVC pipe or Plexiglass. You've just made a dipole!" You should then attach some thin cord or rope to the opposite side of each insulator and then hoist the dipole up in the air between a couple of trees or whatever supports you have -- it doesn't have to be very high. Check out this article on how to make dipoles on the ARRL Web site.

Once you tune into the contest, Kutzko said, you'll hear stations calling "CQ Contest" and giving their call sign. Another station will call them and they'll transmit a short message called the exchange. US and Canadian amateurs give a signal report (just "59" will do fine) and their state. If you hear a DX station, likely to be from South America

or the Pacific -- they'll give the signal report and the sequential serial number (starting with 001) of the QSO in this contest (if you are their 187th QSO, you will receive "187" as part of their exchange to you). For example, if K7CEX hears W5KFT, the sequence might go like this:

CQ Contest from W5KFT
W5KFT from K7CEX
K7CEX you are 59 in Texas
W5KFT from K7CEX you are 59 in Washington
Thanks, CQ Contest from W5KFT

"Your best chances of making a contact are during the middle daylight hours of Saturday and Sunday, due to propagation considerations," Kutzko advises. "But I do have to warn you -- this simple contest can keep you busy for hours as you chase new states and even different countries!There is no need to sit on the sidelines for this fun event -- get on the air and enjoy your Technician license to the fullest!"

==> "THE DOCTOR IS IN" THE ARRL LETTER

This week, ARRL Letter readers are in luck! The ARRL's very own Doctor, author of the popular QST column "The Doctor Is IN," answers a question from his mailbag:

Dave Wright, KB9MNM, of Montgomery, Illinois, asks: I would like to try CW using my PC. I have an all mode 2 meter radio with VOX (voice operated transmit switching) How would I wire this up to the sound card of a computer? Can I use the same configuration for low power radio projects, such as the Tuna-Tin 2 transmitter or the SoftRock receiver, or will I need a special interface device?

The Doctor Answers -- The radio-to-sound card interconnect requires two audio connections: A pair out of the radio (speaker or line out) to the sound card mic (or line in), and a pair from the sound card speaker or line out to the radio mic in, (or line in if it has one).

In both cases, the line level connections are preferred (if they are available) because they don't change in level every time you adjust your volume control. If you get tired of listening to the data tones, you can turn down your speaker volume and still have enough signal from your line out to drive the sound card.

In addition, you need to have a way of switching the radio from receive to transmit. That can be using the VOX (but be careful of strange computer voices (You've Got Mail!) that can also go out over the air. In the absence of VOX, you could even use a manual switch on your push to talk (PTT) line, but that would get cumbersome.

A sound card interface provides transformer isolation on the mic line, to help avoid hum pickup. Most importantly, it picks up the transmit command from the PC serial port and switches the radio PTT line for you, so you don't need to use the radio VOX function. Some allow you to

switch between mic and sound card, and also provide a separate gain control, so you don't have to change everything every time you go back to voice mode.

So you can start out with the simple connections, but if you use it a lot, you will likely want an interface eventually. All of the above applies to your 2 meter set, as well as most HF radios.

The tuna tin I'm thinking of is just a CW transmitter and thus doesn't do sounds at all, so you're kind of stuck. The soft rock is a receiver, so you can use a single cable from the receiver audio output to your sound card input and monitor what's going on while you have a chance to get used to the software choices. I recommend starting there, in any case.

Do you have a question or a problem? Send your questions via e-mail <doctor@arrl.org> or to "The Doctor," ARRL, 225 Main St, Newington, CT 06111 (no phone calls, please). Look for "The Doctor Is IN" every month in QST, the official journal of the ARRL.

==> FCC CALLS ON AMATEUR RADIO SERVICE FOR ASSISTANCE WITH DIGITAL TV CONVERSION

Earlier this month, the ARRL received a request from the FCC asking that ARRL members provide technical educational assistance to their communities concerning the FCC-mandated digital television (DTV) conversion scheduled for February 17, 2009 <http://www.dtv.gov/>.

According to ARRL Media and Public Relations Manager Allen Pitts, W1AGP, Amateur Radio clubs across the country are being asked to develop and implement plans to provide information throughout January and February about the DTV conversion in their areas. The FCC is leaving it up to the clubs to decide how to do this, as local groups understand the communities in ways that the FCC does not. Each community is a little different, Pitts said, so plans carried out by the clubs will vary from community to community. Interested groups should contact their ARRL Section Manager.

Pitts stressed that hams should not make "house calls," sell any equipment or do actual installations; the request is only to distribute technical information and FCC materials. He commented: "As we all know, some folks just never get the message until too late. Materials for presentations, education and many other activities are available online <http://www.dtv.gov/outreach.html>. Beginning early January, FCC staff will contact Section Managers and leaders of interested clubs and, where possible, arrange to meet to share even more information, audio, visual and printed materials, as well as training aids, with the clubs involved this effort. We know the time is short, but your aid in this now will be appreciated."

In early January, Pitts said that the FCC will ask Section Managers for the names and contact information of the volunteering groups. The FCC staff will then make contact with the groups, learn their plans and

provide them with the media, brochures or other materials groups may need in this effort. FCC regional staff members may even come and visit with larger groups to aid in implementation of the group's plans.

"I really appreciate the willingness of the ARRL to actively participate in helping Americans with the transition to DTV and your helpful suggestions," said George Dillon, FCC Deputy Bureau Chief for Field Operations. "The DTV transition will be an historic moment in the evolution of TV. Broadcast television stations can offer viewers improved picture and sound quality and new programming choices. All-digital broadcasting also will allow us to significantly improve public safety communications and will usher in a new era of advanced wireless services such as the widespread deployment of wireless broadband. Our goal is to engage the amateur community on a cooperative basis to help with the DTV outreach and to educate consumers."

Dillon continued that local Amateur Radio clubs might consider offering technical advice to consumers via telephone to those consumers who may encounter difficulty with the installation and setting up of their converter box. "Any assistance...will greatly help in the efforts of the FCC to ensure a smooth transition to DTV on February 17, 2009."

Pitts advises interested groups to keep in mind that they are to provide technical educational help only: "At no time should the hams enter someone else's home or install equipment. They should not broker or sell conversion boxes in any way. Clubs can provide such things as a call-in telephone number for technical help, make presentations at meetings, do demonstrations at malls or give talks to other groups -- whatever works in their community."

==> FLEXRADIO DONATES SOFTWARE DEFINED RADIO TO W1AW

Thanks to the generosity of the crew at FlexRadio Systems <http://www.flex-radio.com/>, W1AW, the Hiram Percy Maxim Memorial Station, now boasts a software-defined radio (SDR) -- a FLEX 5000A <http://www.flex-radio.com/Products.aspx?topic=F5Ka_details>. FlexRadio Vice President John Basilotto, W5GI, visited ARRL Headquarters on December 8 to present the radio.

"We are delighted that FlexRadio's generosity makes it possible for visitors to W1AW to experience the exciting direction in which SDR technology is taking radio communication," said ARRL Chief Executive Officer David Sumner, K1ZZ. The radio, located in one of the three W1AW operating suites, will be available for guests to use when they visit W1AW.

According to Basilotto, the 5000A at W1AW is the first prototype (or beta unit) of the radio. Although the hardware in current production units is nearly the same as the first unit, Basilotto said that the beta 5000 is "a much better performer because of a continued stream of software updates."

W1AW Station Manager Joe Carcia, NJ1Q, said he is excited to receive this new piece of equipment: "I really want to thank John and all the folks at FlexRadio for donating this nifty rig to W1AW. I know those hams who make the trek here to Newington will be lining up to use this new radio, especially when they can see what it is capable of doing. It will definitely be used a lot and I know our visitors will enjoy using the latest in ham radio technology."

Basilotto said that in recognition of what he called the ARRL's "considerable influence on Amateur Radio," FlexRadio Systems felt that W1AW should be equipped with the latest in software defined radio technology. "We believe that the FLEX 5000A will provide an enjoyable experience for the ARRL staff and guest operators for many years to come," he said.

==> ARRL THANKS DONORS WITH PUBLICATION GIFT CERTIFICATES

It's that time of year when we remember those people and organizations that are important to us all year long. "The generosity of members who support the ARRL with contributions to fund programs not covered by member dues are vital to the financial strength of the ARRL," said ARRL Chief Development Officer Mary Hobart, K1MMH. "Thank you if you've made a recent contribution. If you've already made a contribution in 2008, I hope you'll consider making an additional gift before December 31."

"When you make a contribution of $25 or more to any ARRL fund before December 31, we will express our thanks and appreciation with a $10 ARRL Gift Certificate* that you can apply toward your next publication sales purchase," Hobart said. She noted that in these final weeks of 2008, a contribution of $25, $50, $100 or more will have a significant impact on the ARRL.

Place your contribution on our secure Web site <http://www.arrl.org/donation>, by mail or phone at 860-594-0397, and we'll send your $10 ARRL Gift Certificate right away; you can also click on the "Donate Today" button, located on the ARRL home page <http://www.arrl.org/>. However you choose to make your donation, you can designate your contribution to be allocated to any of the following ARRL funds:
* The ARRL Diamond Club <http://www.arrl.org/diamondclub>
* The Spectrum Defense Fund
* The Education and Technology Fund
* The Lab Fund
* The Historic Preservation Fund
* The ARRL General Fund

If you have any questions or require more information, please contact Hobart via e-mail <k1mmh@arrl.org> or by phone at 860-594-0397.

* About ARRL Gift Certificates: After making your contribution of $25 or more, your $10 ARRL Gift Certificate will be promptly mailed to you. Certificates must be redeemed by April 30, 2009. It is easy to redeem your certificate online, by mail or phone! This offer is valid on all

sale and regular-priced ARRL publications.

==> ARRL MEMBERSHIP NEWSLETTERS, BULLETINS AND NOTIFICATIONS

Did you know the ARRL offers more newsletters than just The ARRL Letter? One of the many ARRL membership benefits includes other newsletters, such as the ARRL Contest Update (a bi-weekly contest newsletter), the ARES E-Letter (sent monthly, containing public service and emergency communications news), the ARRL Club News, the ARRL Instructor/Teacher E-Letter and the VE Newsletter, just to name a few.

You can also elect to receive news and information from your Division Director and Section Manager (keep in mind that not all Divisions/Sections send notices), as well as W1AW bulletins that relate to DX, propagation, satellites and Keplerian reports. The ARRL also offers a free notification service to members, letting them know when their membership and license are due to expire.

Sign up for these newsletters, bulletins and notifications on the Member Data page of the ARRL Web site <http://www.arrl.org/members-only/memdata.html>.

==>SOLAR UPDATE

Tad "The Sun to me is dark and silent as the moon" Cook, K7RA, this week reports: Finally! A sunspot group appeared this week, about three weeks since the last group disappeared. The first spotless day after sunspot group 1008's last appearance was Tuesday, November 18; the last spotless day before group 1009 emerged was Tuesday, December 9. As expected, this was another Solar Cycle 24 group, emerging far south of our Sun's equator. Sunspot numbers for December 4-10 were 0, 0, 0, 0, 0, 0 and 13 with a mean of 1.9. The 10.7 cm flux was 69.6, 68.8, 69.1, 69, 68.5, 68.7 and 70.8 with a mean of 69.2. The estimated planetary A indices were 6, 10, 7, 6, 5, 0 and 2 with a mean of 5.1. The estimated mid-latitude A indices were 4, 7, 14, 6, 1, 1 and 2 with a mean of 5. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by John Milton's "Samson Agonistes" <http://www.dartmouth.edu/~milton/reading_room/samson/drama/index.shtml> .

==>IN BRIEF:

* This Week on the Radio: This week, the ARRL 10 Meter Contest on December 13-14. The NA High Speed Meteor Scatter Winter Rally is December 11-15. The MDXA PSK DeathMatch is December 13-14 and the SKCC Weekend Sprintathon is December 14. Next week, the AGB-Party Contest and the Russian 160 Meter Contest are on December 19. The OK DX RTTY Contest

and the Feld Hell Sprint are December 20. On December 20-21, look for the International Naval Contest and the Croatian CW Contest to be on the air. The Lighthouse Christmas Lights QSO Party starts December 20 and goes through January 4. The ARCI Holiday Spirits Homebrew Sprint is December 21, the Run for the Bacon QRP Contest is December 22 and the SKCC Sprint is December 24. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, December 21, 2008, for these online course sessions beginning on Friday, January 2, 2009: Amateur Radio Emergency Communications Level 1, Radio Frequency Interference, Antenna Design and Construction, Technician License Course, Analog Electronics and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cep@arrl.org>.

* ARRL Headquarters Closed for Christmas, New Year's Holidays: ARRL Headquarters will be closed Thursday, December 25 and Thursday, January 1 in observance of Christmas and New Year's Day. There will be no W1AW bulletins or code practice transmissions those days. There will be no ARRL Letter or ARRL Audio News on Friday, December 26 or January 2. Headquarters will be open during regular business hours on Friday, December 26 and Friday, January 2. We wish everyone a safe and joyful holiday season and a prosperous 2009.

* Former Wisconsin Section Manager Roy Pedersen, K9FHI (SK): Former Wisconsin Section Manager Roy A. Pedersen, K9FHI, passed away on December 3 from lung cancer. He was 84. Pedersen served as Section Manager from 1973-1984 and from 1996-1999. First licensed as KN9FHI in 1961, he loved camping and visiting hamfests and swapmeets around Wisconsin and going to meetings of the Wisconsin Nets Association to promote Amateur Radio and the ARRL. A QCWA member, Pedersen was active on many Wisconsin phone nets and served as a Net Control and traffic

handler. He also served as Assistant Emergency Coordinator for the ARES group in Dodge County, as well as an Official Relay Station, Official Emergency Station and ARRL Volunteer Examiner. Pedersen is survived by his wife Beryl, KA9BAC, and sons Gary, KA9BAE, and Michael, N9QMV. -- Information provided by former Wisconsin Section Manager Richard Regent, K9GDF

* Former Eastern Pennsylvania Section Manager Allen Breiner Sr, W3TI (SK): Former Section Manager in the ARRL Eastern Pennsylvania Section Allen R. Breiner Sr, W3TI, passed away on November 19, 2008. He was 88. Breiner was first elected as Section Communications Manager -- as the SM job used to be known -- in 1959 and held that post for 12 years. He was elected as SM in 1995 and re-elected in 1998 and 2000, but stepped down in December 2000. Breiner also served as EPA Public Information Officer from 1999-2000, Official Observer from 2001-2002 and Official Emergency Station from 1996-2000. "Allen was very active in Amateur Radio," said current EPA Section Manager Eric Olena, WB3FPL. "His presence will be missed by many." Breiner is survived by son Allen R Breiner Jr, W3ZRQ, daughters, Sylvia Seely and Linda Kunkel, and brother Eugene.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:

ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

I know from direct experience that some people will try to blame you for anything they can if they know you're there. (Of course for every one of these there are probably more long suffering nice people).

I once had a "neighbor" about a half mile away that called FCC enough times to report me and result in a nice little letter from them. It seems that the neighbor was upset that I was disrupting his television service every morning around 0600 when he parked his kids in front of the one eyed babysitter. Needless to say, I was somewhat puzzled because I'm almost never on at that hour because I just don't get up that early and when I do it's to get ready for an early work schedule or go somewhere else for a Field Day...

After responding to the not-so-local office, I paid the neighbor a visit. Right away, I noticed his greenhouses had a lot of odd looking lights, and some of them were cycling on and off even at 0630 when I showed up. The AC wiring to them looked like it was cobbled together with whatever was left over from construction sites, and there wasn't even any visible ground connection for his power panel... (inside or out). I tried to explain that improper power to the grow lights could cause him the sort of problem he complained about, but he was adamant that it had been a problem, particularly during a two week period when I was on vacation and not even home.

I called the local building inspector and the power company and gave them the address, indicating that the wiring didn't appear to be to code and was likely causing conducted interference to others... Within a few weeks somebody had evidently been out to look, as the greenhouses were dark, and when they were lit again, the lights were all working and the cabling between the house and the greenhouses looked like it had been changed. I called him up and told him I sold the radio (about the time the greenhouses went dark) and he said the interference went away. Funny but it never came back when I transmitted, and I still have that radio I "sold"...

Of course, whether someone connects amateur operation to momentary outages of digital TV is another question, but I've had more than one person that claimed they had problems because an amateur antenna went up in the neighborhood...

The common wisdom when I was using six meters in the Sixties was that
you had to wait two weeks after putting up a new skyhook, so that you
could shame anyone who complained by proving it wasn't connected yet.

I don't really have a handle on this either.

Do note that the "low-band" channels 54-88MHz are NOT going away with digital -- there will still be digital TV stations on RF channel 2. Not nearly as many as there are analog stations today, but there *will* be some.

(and we really don't know what's going to happen in a year or two when the FCC lifts the freeze on applications for new TV stations. It will be

possible to allot a bunch of new stations in this 54-88MHz band -- will anyone think they can make any money that way?)

Thank you for sharing that nugget of information <sigh>. I didn't look; silly me, I thought that someone had learned from problems caused by the proximity of channel 2 and the 6-meter amateur band.

I'm inclined to think that all the new digital programming streams have taken care of any demand for new channels for a good long time. One of our local public TV stations is maintaining four separate digital channels. I'm not complaining, but I am a bit surprised that they expanded as much as they did.

Then there's the pressure from cable. If someone thinks that they can make money by attracting humans to their programming, it's more likely that they'll start a new cable station with a huge potential viewing audience than start a new traditional TV station with only a limited potential audience. In fact, I wouldn't be surprised to see local stations folding over the next few years just as we are seeing local newspapers in trouble.

Does anyone have a scan or a copy of the original "Hatlow's They'll do
it every time." comic where someone is complaining about the local ham
messing up the doctor's diathermy machine?

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations | campaigns will not be permitted. Relatively unbiased announcements or | reviews of new amateur radio-related products or services may be | permitted at the discretion of the moderators. Such posters are asked | to disclose their financial or professional interest, if any, in such | products or services. |

Mentions of small amounts of free items for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. | However, a pointer to a website or other external source of information | is permitted and encouraged in cases where it is relevant to an existing | thread, with appropriate context being given in the post. A URL with no | information about what a user should expect to find there will be | rejected. A pointer to information that is off-charter for | rec.radio.amateur.moderated will be rejected, as will a pointer which | itself does not meet the rec.radio.amateur.moderated guidelines (such as | a URL containing embedded name-calling). |

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar

government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

- The last approved thread of discussion about this topic on our newsgroup from October 2008:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/19770b88ec527aff/8dcee92de293f615?hl=en#8dcee92de293f615

You might have heard; there's a small party scheduled on the National Mall
on 20 January. Depending on who you ask, 2 to 5 million people are expected.
[DC is frantically looking for parking for 10,000 tour buses, is borrowing
four thousand cops, etc.]

Now consider that some significant percentage of them will be carrying cell
phones; and likely calling each other or home... not to mention trying
to send pictures...

While the cell carriers are running PR about how they'll bring in mobile
cellsites on wheels, etc; I suspect that the systems will fall over just
trying to poll all those units and carry the registrations, much less
carrying any traffic.

"May you live in interesting [RF] times.." seems applicable.

Bring your 2-mtr handheld. I bet it will work better...

Oh yeah, that little upcoming party. :-)

>Now consider that some significant percentage of them will be carrying cell
>phones; and likely calling each other or home... not to mention trying
>to send pictures...

Anyone here know offhand what the bandwidth is (on average; I imagine
that resolution varies from phone to phone) for photos vs. voice on a
cell phone?

>While the cell carriers are running PR about how they'll bring in mobile
>cellsites on wheels, etc; I suspect that the systems will fall over just
>trying to poll all those units and carry the registrations, much less
>carrying any traffic.

Perhaps you've already answered this question with your comments about
polling and registration, David (I'm not up on all the cell phone
terminology), but does it exacerbate the problem for the carriers if
most of the phones are roaming rather than in their home areas? Does
it take more time for the cell software to figure out who's making
a connection and what to do with it if it's not a local phone?

>"May you live in interesting [RF] times.." seems applicable.
>
>Bring your 2-mtr handheld. I bet it will work better...

I hope that anyone from this group who attends the inauguration
(or gets within a couple miles of it!) will post reports on how
their HTs did vs. their cell phones. That would be interesting!

A few months ago, I was going through security at Parliament in
Ottawa, and after my purse went through the X-ray machine, a guard
pulled out my eight-year-old cellphone and asked whether it was a
radio. ;-) Not a dumb question, considering that it had a stub
antenna sticking out of it, which none of the current models do.
I finally broked down and bought a new phone a few weeks ago. :-)

There are multiple protocols and bandwidths in use, so this is a
difficult thing to answer. Needless to say, the spectrum space is a
limited resource and usually the "digital" or data modes run in much
lower priority than your avarage voice circuit. SMS and MMS messages
get stored and sent when possible. That's not to say a voice circuit
would be more reliable. When conditions are such that there is more
demmand than call slots, voice calls will be routinely dumped (i.e.
disconnected).

>

All this happens at the MSC that is responsible for the cell tower your phone happens to be using and it is generally done once when the phone shows up in the MSC's area. What happens is the MSC sends out a query to the your carrier asking for your billing information. This information is maintained in your HLR (Home Location Register) who's address can be determined by the information contained in your phone's ID. Once your billing information is located (and validated), the MSC puts it in a VLR (Visitor Location Register) that it maintains of any handsets it is currently servicing. The HLR keeps a record of where your handset is so any incoming calls can be routed to you.

All this VLR/HLR stuff happens before you ever see any signal show up on your phone display, so when you start making a call, there is not much to do but assign your call a slot, connect the voice path, time the call and then cut the billing record when you are done.

I'm just guessing, but I'll bet that voice cell service will be very spotty at best for a number of reasons. First, the system will be overloaded as you expect. But second I'd be suprised if the service isn't jamed for security reasons along with most of the spectrum space. Yes, the secret service can do that you know.

Third, I'll bet that SMS (AKA Text) and MMS messages will be more reliable means of communicating. These things get stored and forwarded as traffic permits, so they won't be cut off when you walk 10 feet and move to a cell that doesn't have any call slots left and get cut off. The message will be stored until the MSC can find a time to get it to your handset.

I'll bet that if you have an HT, it will be far more ueseful on voice than the cell phone in your pocket. If they don't jam those frequencies too. :)

Source record: 2295

I would wager a lot that no intentional government jamming will take
place because a whole lot of Government people will be using the system
including some that have been provided with priority access codes by the
Department of Homeland Security. There calls will go through because
the system will dump any regular cell phone call that it needs to in
order to give a priority coded call access to the system. Priority
access codes have to be invoked call by call so having a code does not
give you priority access unless you invoke the codes transmission
manually by using a memory recall function on your handset. Fire
Chiefs, Police Chiefs, and local government Chief Executives are
examples of persons who are eligible to have a priority code issued to
them. Misuse can cause your code to be disabled.

I have personal friends and colleagues that are uniformed Secret Service
and US Park Police officers and they say they have never heard of the
secret service jamming anything. These are guys I have carried patients
out of three floor walk ups with because they were members of my
volunteer fire department or worked for the same private ambulance
company as I did low these many years ago. If they were forbidden to
talk about it they wouldn't lie to me they would just say "I'm not
allowed to talk about that."

I do expect that we will be running a directed net on the KV3B,
146.955-, no CTCSS required, repeater that has a slave receiver site
just south of the national mall. When all of our equipment is working,
as it is right now, we have HT coverage of the entire mall and downtown
Washington, DC area at street level. Repeater description is available
at <www.marcclub.org>.

Amateur Radio Newsline(tm) Report 1636 - December 19, 2008

Ladies and gentlemen, with some thank-you's to our listeners, here's amateur Radio Newsline's Support Fund Administrator Andy Jarema, N6TCQ:

--

During the 3-month period of January through March of 2008 we heard from our regular contributors Benton Bonney, W4PE of Orlando, Florida; Joseph Bartzi, Jr., KC8DKF of Columbus, OH; Frank Hemko of Harrods Creek KY; William Walters, WA2IBM, and Scott Hensley of the Area Communications Team, both in San Jose, California; Stephen Perluss and the South Orange County Amateur Society in Mission Viejo, California.

We also heard fro the Greensboro, North Caolina ARS, W4GSO; the Tampa Florida ARC; t he Reading, PA ARC, W3BN; K6OX, the Antelope Valley ARC in Lancaster and the Conejo Valley ARC based in Thousand Oaks, California who passed the hat on our behalf at their holiday party.

During this season of giving and thanks we at Newsline are thankful of our listeners who give. Give to keep these up-to-the minute newscasts on the air. We've made it easy for you to do so through PayPal at our website arnewsline.org. Or you can help directly at our address which will be given at the end of this newscast. Either way, you will help continue a 31 year tradition of getting you the news of Amateur Radio first.

I'm Andy Jarema, N6TCQ, and the very best of holidays to you.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1636 with a release date of Friday, December 19th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The ARRL Antenna Defense Fund donates $5000 to help a California ham in his suit against a the city of Palmdale, Switzerland gives it hams access to 6 meters, South Africa to host 2011 I-A-R-U Region One conference, go Q-R-P with a tree -- and -- a musical trip to a rare DXpedition spot highlight Amateur Radio Newsline(tm) report number 1636 coming your way right now.

(Billboard Cart Here)

**

RADIO LAW: ARRL ANTENNA DEFENE FUND MAKES $5000 DONATION TO WB6X LAWSUIT

The ARRL's Amateur Radio Legal Defense and Assistance Committee has voted to contribute $5,000 toward the costs of a lawsuit against the City of Palmdale California. This, after the city forces a ham to take down his antenna after issuing a permit for him to put it up. Amateur Radio Newsline's Bruce Tennant, K6PZW, has been following this case and has the latest:

--

The suit against the city of Palmdale was filed by ARRL Volunteer Counsel Len Shaffer, WA6QHD, on behalf of Alec Zubarau, WB6X. Zubaru, who lives in the city located about 55 miles north-east of Los Angeles was forced by to remove an antenna tower erected under a previously issued and valid building permit. The permit revocation followed complaints of radio frequency interference by some of Alec's neighbors. Those complaints were never substantiated and, in any case, are a matter of federal preemption and not within the jurisdiction of the city.

Over $1,500 had already been contributed by clubs and their members from throughout the ARRL's Southwestern Division. This contribution from the League-managed Antenna Defense Fund is meant to further help defray the expenses of preparing for the February, 2009 court date. Even with attorney Len Shaffer performing the legal work free of charge, just compiling the record to present in court can be costly.

The Chairman of the ARRL Defense Committee is Jay Bellows, Kï¿½QB. Bellows noted that, although the case has not yet reached the appellate level, the egregious nature of Palmdale's actions, including ordering removal of a previously approved antenna tower, the potential impact on a large number of amateurs and the existence of substantial local financial support from the ham community were significant factors in the Committee's decision to provide support for this case.

Meantime it appears as if Palmdale is trying to play a political get even game with its local ham radio community over the Zubaru matter. Shortly after issuing the WB6X permit revocation order, the City of Palmdale began drafting an amended antenna ordinance. One that places severe restrictions on all Amateur Radio antennas. This includes a height limit of only one inch above a buildings roof.

The draft was released just before Thanksgiving, and a hearing was scheduled for December 4th. At the request of ARRL Vice-Director Marty Woll, N6VI, who attended the Palmdale Planning Commission meeting along with about a dozen local hams and supporters, ARRL General Counsel Chris Imlay, W3KD, wrote a lengthy letter to the City Attorney pointing out numerous flaws in the proposed ordinance. Imlay's letter also explained why many of its provisions are unenforceable due to federal and state preemption. Thanks to help from Keith Hoyt K6GXO, Eugene Humphreys KG6SLC and others in the Antelope Valley Amateur Radio Club, Woll has an opportunity to meet with management of the Palmdale Public Safety Department, which is supportive of hams. He and Hoyt are also scheduled to meet with the Planning Department and Assistant City Attorney in early January.

Unfortunately, the restrictive nature of the proposed ordinance has made it a hot topic on ham radio Internet chat sites. Much of the information appears to be hearsay. Some of it is simply opinions that others consider to be fact even though many of the posters live thousands of miles away and really have no idea of what the situation is.

Obviously they can have no idea of the organized effort that local hams in concert with ARRL officials are working on to bring the matter to a positive conclusion for the hams of Palmdale. As such far better way for those outside of the region to show support for the Palmdale ham radio community is to make a donation to the W6BX Defense Support Fund. Checks should be made payable to Leonard J. Shaffer, Esq. P.O. Box 570936, Tarzana, CA 91357. Make certain to include the words "WB6X Defense Fund" on the memo line.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

If we at Newsline may be permitted to express an editorial comment. With local hams along with ARRL division and national representatives devoting considerable time and resources toward resolving the issue, any direct intervention by outsiders can only put Palmdale into a position where, politically, it cannot back away from its hard line stand. If that happens it could very easily force the Palmdale ham radio community to spend thousands if not tens of thousands of dollars in litigation fees fighting the matter in the federal courts. And that's the last thing the hams of Palmdale want to have happen. Please respect their wishes as you would want them to respect your. End of editorial. (ARNewsline(tm) from information supplied by ARRL Southwestern Division)

**

RADIO LAW: SAN DIEGO TOWER HEIGHT ISSUE

Still in California, the City of San Diego has also proposed a modification of its antenna zoning rules. Up to now, ham antennas have not been subject to the height restrictions applicable to buildings and other structures. Under the modification, however, those restrictions will apply unless the amateur obtains a time-consuming and cost-prohibitive Process Three Site Development Permit.

A Three Site Development Permit requires very specific site plans, engineering studies, public hearings, and perhaps hiring a land use attorney. And after all of this an applicant may be denied the request for a height increase.

Attorney Larry Serra, N6NC, San Diego DX Club President Glenn Rattmann, K6NA, Section Manager Steve Early, AD6VI, and others are staying on top of this proposal, which has a short comment deadline of January 2, 2009. The San Diego ham community has also engaged the services of a prominent local land-use attorney to prepare and file a comment on their behalf. Also, ARRL General Counsel Chris Imlay, W3KD, is preparing a formal League response to the City.

More on both of these issues in future, Amateur Radio Newsline reports. (ARNewsline(tm) from information supplied by ARRL Southwestern Division)

**

RESTRUCTURING: SWITZERLAND ALLOCATES 6 METERS TO HAM RADIO ON JANUARY 1

Some good news for hams in Switzerland. Swiss telecommunications authorities will allocate the 50 MHz band to amateur radio on a secondary basis beginning January 1, 2009.

Swiss and foreign CEPT class licensees will be permitted to transmit with up to 100 watts PEP on 50 to 52 MHz without any antenna restrictions. The one caveat is that primary users may not be disturbed. This includes some TV stations active on the VHF band I in Northern Italy. (Southgate)

**

WORLDBEAT: SOUTH AFRICA TO HOST 2011 IARU REGION 1 CONFERENCE
Sun City in South Africa will host the next IARU Region 1 Conference in 2011. The Deutscher Amateur Radio Club website reports that the IARU Region 1 Conference meeting in Cavtat, Croatia held a ballot to choose the venue for 2011. Of the 47 votes cast, there were 22 to Sun City, 15 to Malaga and 10 votes to Hatfield.
According to the DARC's website. newly elected secretary Dennis Green, ZS4BS was visibly surprised. He's quoted as saying that the delegates would be welcome in South Africa. (IARU, Southgate)

**

BREAK 1

Wishing you a most joyous holiday season, from Auckland New Zealand and Los Angeles California, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the Peace River Repeater Association system serving Punta Gorda Florida.

(5 sec pause here)

**

KIDS IN THE NEWS: YACHT RECRUITS ITS FIRST INTERNATIONAL MEMBERS

A contest club for youngsters has its first members overseas. Rebecca Bruce has the details:

--

The Young Amateur Contest Ham Team, better known by the acronym yacht has invited to young South African amateurs to join their group. 11 year old Mitchell Mynhard, ZU6M, and his 9 year old sister Melinda, ZU6MM will be the groups first international members.

The Young Amateur Contest Ham Team was founded by Ed Engleman, KG8CX, of Memoniee, Michigan. Its purpose is to generate interest in contesting

among younger hams and to foster a greater appreciation of the role that younger license holders play in the overall hobby of amateur radio.

For the Amateur Radio Newsline, I'm Rebecca Bruce, in Los Angeles.

--

More information on The Young Amateur Contest Ham Team is at the groups website. Its on-line at www.wd8dx.com /yacht.htm (YACHT)

**

HAM HAPPENINGS: ARMAD RECEIVES SPECIAL FLAG

The sponsor of Amateur Radio Military Appreciation Day -- better known as ARMAD -- has received a flag that flew over Camp Fallujah, Iraq by U.S. Marines, and other United States service members.

The December 14th delivery of the flag to ARMAD though its founder Emory McClendon, KB9IBW, was made possible by Mary Ellen Wooten of the organization "From Us To You." This is a military support group that sends packages to our Troops that are deployed.

ARMAD has worked with "From Us To You" and the Albamarle Amateur Radio Club over the past few years on several projects. Among its involvement it has set up a live station at one of their events using amateur radio. This, so that U.S. troops could hear the voices of Americans expressing support for them.

You can learn more about "From Us To You" on the Web at www dot fromustoyou dot us. More information regarding ARMAD at www.armad.net. (ARMAD)

**

RESCUE RADIO: HAMS ASSIST DURING NORTHEAST ICE STORM

Ham radio was called out the evening of Thursday, December 11th into Friday December 12th. This as a major ice storm accompanied by freezing rains hit the New England states. Called into action were ARES, RACES, SKYWARN and MARS. All four groups responded to calls for assistance from served agencies and then participated in the recovery phase of the storm. Hardest hit were Western, Central and Northeast Massachusetts, as well as parts of New Hampshire and Maine. A full report on what hams did is on line at the ARRL website at www.arrl.org. (ARRL)

**

RESCUE RADIO: NEW RAC ARES OPERATIONS TRAINING MANUAL

The recently introduced Radio Amateurs of Canada A-R-E-S Operations Training Manual has met with widespread approval from the amateur radio community and is even being requested by Emcomm groups in other countries. Because of this plans are that it will be printed in a handy and portable hard copy form early in 2009. Once published, the new training resource will be offered for sale on the Radio Amateurs of Canada on-line

store. It will continue to be available for downloading, free of charge, at www.rac.ca/fieldorg/RACARESTrainingManual.htm. (RAC)

**

RESCUE RADIO: RAC ANNOUNCES EMCOMM E-MAIL ALERT SYSTEM

The Radio Amateurs of Canada Field Services Organization has also created an ARES-Alert system for Radio Amateurs who are part of the Amateur Radio Emergency Service or other Canadian Emcomm unit. The e mail based system is being provided as a means to alert Canadian radio amateurs of emergencies or disasters, or threat of same, where ham radio emergency services are or may be required. It will also serve to advise stations of the need to avoid or monitor frequencies that are being used in an emergency event anywhere in the world. (RAC)

**

HOLIDAY HAM RADIO: OPERATION SANTA CLAUS IN FLORIDA

Operation Santa Claus continues as Christmas Approaches and it was recognized this week by a Florida news service. The Tampa Bay 10 Connection says that the Bay Care Emergency Amateur Radio group in Tampa recently used amateur radio to connect kids at St Joseph's Children's Hospital with Saint Nick so that they could put in their special gift requests.

Len Calahan who is the Senior Maintenance Mechanic for the hospital and a member of the radio club. He told Tampa Bay 10 that the north pole's a long way away and cell phones up there. So he and other club members use ham radio as substitute.

Another club member is Bob McElroy, who goes room to room letting kids make Christmas requests through a two way hand held. He says that whether they understand the technology or not, they are hearing Santa Claus and that's making a little bit of a difference in their lives.

This is the first year the St. Joseph's Children's Hospital has had ham radio connect kids to Santa. The call signs of the hams involved were not included in the Tampa Bay 10 Connection report. (eHam, TampaBay 10 Connection)

**

D-STAR NEWS: SUPPORT NET EXCEEDS 600 AND GROWING

There are now more than 600 radio amateurs world-wide posting to the D-Star on-line forum and the number seems to increase every day.

Since the introduction of www.dstarforum.com earlier this year, membership and site usage has been increasing drastically. D-Star usage has also shown a marked increase since the introduction of the DV Dongle giving hams a relatively inexpensive and easy way to gain the benefits of D-Star from home.

www.dstarforum.com holds a weekly D-Star net on reflector 5A on Saturdays at 19.00 UTC. This net, chaired by G0KSC and all D-Star enthusiasts are invited to join in. (News release)

**

WORLDBEAT: CHU CANADA TO CHANGE FREQUENCY TO 7850 KHZ

After seventy years of broadcasting Canada's official time, shortwave station CHU will move the transmission frequency for the 7335 kHz transmitter to 7850 kHz. This, to avoid interference to its operations as the result of band allocation changes approved by the International Telecommunications Union back in April 2007.

CHU is a part of Canada's National Research Council's system for disseminating official time throughout that nation. It broadcasts 24 hours a day from a location approximately 20 kilometers south-west of Ottawa. Transmissions include tones to mark the seconds, voice to announce the time in French and English, and digital data to interface with computers.

The frequency change to CHU change will occur on January 1st, 2009 at 0000 UTC. More is on-line at www.nrc-cnrc.gc.ca (W8HDU)

**

WORLDBEAT: UK TIME STATION CLOSED FOR MAINTENANCE

The UK based M-S-F 60 kHz time and frequency signal broadcast was to be shut down from 1000 UTC to 1400 UTC on December 11th. The interruption to the transmission was required to allow scheduled maintenance work to be carried out. Additional information is on their website at www.npl.co.uk/time. (RSGB, Southgate)

**

ON THE AIR: NORTH AMERICAN TRAFFIC AND AWARDS NET RETURNS

After an absence of more than three decades the North American Traffic and Awards Net is returning to the ham bands. The net resumes operation on New Years Day, January 1, 2009 at 11 p.m. Eastern Standard Ttime.

In addition to its normal operations, the net will also be handling formal message traffic at the outset of each session and welcome all stations with messages to be passed to join it nightly on 3 point 905 MHz. The net has also created an award to recognize stations for bringing and passing message traffic.

The North American Traffic and Awards Net was founded back in 1976 to assist hams trying to earn the ARRL Bicentennial Worked All States Award. Its new goal is to assist in the ARRL's new Triple Play Award announced by the League a few weeks ago. (Press release)

**

BREAK 2

This is ham radio news for today's radio amateur. This week, from beneath the Southern Cross, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RADIO SAFETY: EMI MAY HAVE CAUSED AIRPLANE TO DIVE

Electromagnetic interference can make it impossible for hams to communicate, but aviation authorities want to know if it almost caused a Quantas airline flight almost falling out of the sky. Amateur Radio Newsline's Don Wilbanks, AE5DW, reports:

--

WORLDBEAT - AUSTRALIA: EMI MAY HAVE CAUSED AIRPLANE TO DIVE

This the incident occurred last month as a Qantas Airbus A330 flew off West Australians coast en route from Singapore to Perth. A preliminary report into the incident, by the Australian Transport Safety Bureau, says that there is a possibility that transmissions from the Harold E Holt Naval Communications Station interfered with aircraft onboard electronic systems.

The review board is also investigating the possibility that passenger electronic devices aboard the aircraft caused the problem but admits that both are unlikely. That said, it cannot rule either out at this stage.

--

Experts in the field of electromagnetic interference are deeply divided on whether or not random EMI could cause an incident such as this. (Science On_line)

**

EMERGING TECHNOLOGY: NEW NAND FLASH MEMORY SYSTEM FROM MICRON

Micron Technology has introduced a new serial NAND flash memory technology. One that the company said will enable easier and more cost- effective expansion of storage capacity for embedded applications in products like television set-top boxes, DVRs, printers and even automobile navigation systems.

The technology, with a chip density starting at 1 gigabit, improves on traditional NOR flash, which typically tops out at a density of 128 megabytes. Company officials said that as many embedded applications transition from merely decoding information to more sophisticated operations like managing multimedia, photos and other data-intensive content, the need for cheap and easy storage expansion is increasingly important. (Press Release)

**

EMERGING TECHNOLOGY: THEY CALL IT TREE POWER

Imagine being able to run a QRP station by powering it from a near-by tree. Sound strange? Well that's one of the possible uses for an emerging
technology called tree power. Jim Linton, VK3PC of the WIA News explains:

--

A voltage difference exits between a tree and the ground. Researchers have found that the metabolism of a tree works to maintain the voltage difference, whether it's day or night, rain or shine all year round.

Up to two volts is available, enough to trickle-charge a battery or power a wireless transmitter.

Tree-power will be helping to collect improved local climate data that is essential for computerized fire modeling.

The United States Forest Service is about to field test a tree-powered wireless network. It looks like being an alternative to installing intrusive solar panels in a forest.

The bio-energy source may have other applications too, such as border security and managing agriculture.

Could this lead to self-illuminated Christmas trees or even radio amateurs tapping in it for QRP operation.

Anyone pine for the day that this kind of energy becomes poplar?

For the Amateur Radio Newsline I'm Jim Linton VK3PC.

--

A rather cute play on words from our friend in Australia, VK3PC. (WIA News)

**

HAM RADIO IN SPACE: L-BAND EXPERIMENT ON THE ISS

Another experiment using the ham station on board the International Space Station. From December 28th through January 3rd ARISS plans to reconfigure the on-orbit crossband repeater for test of its L-Band uplink capability, which, to date, has not been proven out.

Plans call for an for an uplink of 1269.65 MHz and downlink on the standard frequency 145.80 MHz. The system will be in low power transmit. Given the substantial cable losses of the L-band system, ARISS hopes that some big gun stations on the ground will be able to penetrate through, keep up with Doppler, and make a contact. (ANS)

**

HAM RADIO IN SPACE: AMSAT TO OFFER DXPEDITION LOANER GEAR

The AMSAT North America Operations Team is in the process of acquiring a few sets of basic loaner gear that will be available to DXpeditions and other groups. This, as a way to promote activity on the satellites from rare locations around the globe..

Initially these loaner packs will consist of simple FM portable stations including a full duplex dual band HT and an Arrow or other suitable antenna. Depending on the success of the program, AMSAT says that it will likely expand it to include the all-mode transponder and digital satellites as well. They also expect to be able to integrate AO-51 into this program at a future date. (ANS)

**

HAM RADIO IN SPACE: W5KWQ SPACE MOBILE QSL CARD UPDATE

Those of you lucky enough to hold a QSO with Richard Garriott, W5KWQ, when he was on-board the International Space Station can receive an ARISS QSL card using the normal process as outlined at www.ariss.org. But that's not
al. W5KWQ is also planning a personal card which is in development. Once it is ready, it will be shipped to the ARISS international QSL volunteers for distribution.

Those that have already sent in for an ARISS QSL card will also get a Richard Garriott personal card once it is available. If you made a contact with W5KWQ but have not sent in your QSL, and would like Richard's personal card, please stand by until the that card is ready. The distribution of this special QSL will parallel how we are distributing the 25th anniversary certificate. (ANS)

**

RADIOSPORTS: THE 2009 CQ DX MARATHON.

The fourth running of the CQ DX Marathon begins at 0000 UTC on January 1, 2009, and runs through 2359 UTC on December 31, 2009. The goal, as always, is to work as many countries and CQ zones as possible at least once during the calendar year.

The only change from the 2008 rules is that the prohibition on assistance, such as lists and passes, for the Unlimited Class is deleted however this limitation remains in effect for the Formula Class.

Once again they will use a downloadable Microsoft Excel template which may be filled in and e-mailed to a special address as your log entry. For complete details, please visit the website at:
http://cq-amateur-radio.com/DX%20Marathon%20Rules%20Dec08.pdf (CQ, OPDX)

**

DX

In DX, G3SWH and G3RWL will be active from Mayotte here between February 26th and March 5th. Both operators will use the single callsign of G3SWH

portable FH. Their activity will be mainly on CW on 80 through 10 meters with a possibility of CW on 160 as well. . QSL via G3SWH, either direct with a self addressed stamped envelope and adequate return postage.

Lastly, HA9RE, and a team of operators will be active from Wallis Island as FW0RE early in 2009. The group is expected to arrive on the island January 26th and may begin operation as early as the 28th. Activity will be on 160 through 10 meters, including 30, 17 and 12 meters, using CW, SSB and RTTY.

(Above from various DX news sources)

THAT FINAL ITEM: CHRISTMAS ISLAND - THE SONG

And finally this week, its not likely that Broadway, television and motion picture entertainer Kristin Chenoweth ever dreamed that she would be mentioned in a ham radio newscast. But guess what. This week she is and Bill Pasternak, WA6ITF, is here to tell us why:

--.

No, Kristin Chenoweth is not a radio amateur. But her new holiday CD titled "A Lovely Way To Spend Christmas" contains a song that radio amateurs in general and DX'ers in particular will likely want to embrace.

The tune, written by Lyle Moraine, is titled "Christmas Island." It musically tells of the fun one can have spending the upcoming holiday on that Indian Ocean rock located some 1600 miles northwest of the Western Australian city of Perth. And while it may not make you want to immediately pack your bags and head out to operate, anyone who is knowledgeable about Christmas Island will be left smiling.

Because its music, we cant play it for you here. However you can get to hear it and the rest of Kristin Chenoweth's new holiday CD on her own website at www.kristin-chenoweth.com. Just click on the words "Launch Player" next to the advertisement for the album right at the top of the page. Then sit back and enjoy the magic of the season as songstress Kristin Chenoweth vicariously transports you across the oceans for a true DX holiday treat.

Enjoying the holiday season, I'm Bill Pasternak, WA6ITF, in the studio in Los Angeles.

--

For those not aware, Christmas Island ranked as number 66 on the 2007 DX News most wanted countries list. (ARNewsline(tm))

==> RESTRICTIVE LOCAL ZONING ORDINANCE PROPOSED AS COURT DATE IN CALIFORNIA ANTENNA CASE NEARS

As his February 2009 court date approaches, Alec Zubarau, WB6X, of Palmdale, California, gets ready to battle his town after being ordered to dismantle his previously approved antenna system. The City of Palmdale has widened its opposition to Amateur Radio antennas by

proposing an ordinance written to thwart the installation of antenna support structures throughout the city <http://www.arrl.org/news/files/Palmdale_Antenna_Ordinance_DRAFT.pdf>.

In 2005, Zubarau applied for a building permit to erect an antenna support structure on his property. The City approved his request, and building permit in hand, Zubarau installed a 22 foot tall crank-up tower (with an ultimate height of 55 feet), but did not place an antenna atop the structure. He also installed a 23 foot tall mast on his house, for a total mast height of 43 feet; he installed an inverted-V on the mast. In January 2007, he placed a 4 element 20 meter SteppIR antenna on the crank-up tower, and the neighbors started complaining to the City.

ARRL Southwestern Division Vice Director Marty Woll, N6VI, said that the neighbors' assertions consisted of what he called "the typical complaints: Aesthetic impact, diminution of property values and RF interference. The RFI complaints were general in nature; no direct evidence was shown of actual RFI, but the City's Planning Commission staff took the position that based on anecdotal evidence presented by the homeowners, the transmissions occurring from the antenna are causing interference with electrical equipment in the surrounding neighborhood."

Woll said that after Zubarau installed the StepIR in 2007, the City of Palmdale, acting on a petition signed by almost 70 of Zubarau's neighbors, voted to revoke Zubarau's original building permit after he had relied on it in putting up his tower. "In order to gain a continuance, Zubarau told the Planning Commission he would remove the SteppIR, in essence, reverting his antenna configuration back to the way to it was before he installed the antenna" said Len Shaffer, WA6QHD, Zubarau's attorney. "At the next hearing, he was ordered to remove not only the antenna, but the support structure, as well."

The City's planning staff also pointed out that Zubarau's recently erected horizontal array extends three feet into the required 10 foot sideyard setback, and that the active array exceeds thirty feet in height beyond the limit in the ordinance.

"Because Zubarau's permit referred to the support structure as 'an antenna with cage (the base)' and the Planning Commission called it a tower antenna, everyone assumed it was indeed an antenna," Shaffer recalled. "When I pointed out to the Planning Commission that it was nothing more than a support structure and did not radiate, they were surprised. They asked if the support structure functioned as an antenna without the horizontal element. I told them it did not. Judy Skousen, Palmdale's Assistant City Attorney, told the Commission did not matter -- the permit and application was for a tower antenna and that is what it was. It did not matter if the nomenclature was added by city employees rather than Zubarau."

"After exhausting his administrative remedies, Zubarau challenged the action in the courts, aided by Shaffer," Woll said "The court date has been set for early February 2009." Woll continued, saying that the

planning staff is placing the burden on Zubarau, saying that he has not submitted a site-specific engineering study showing that the operation or transmission from his house is not interfering with residential uses. The staff also notes that the FCC has failed to resolve RFI complaints in this matter, inferring that the City must act to solve them.

* Palmdale Proposes Rewrite of Amateur Radio Antenna Ordinance

Shortly after issuing the permit revocation order, ARRL Southwestern Director Dick Norton, N6AA, said that the City of Palmdale began drafting an amended antenna ordinance that placed severe restrictions on all Amateur Radio antennas. "The draft was released just before Thanksgiving, and a hearing was scheduled for December 4," Norton said. "Prior to that hearing and at the request of Vice Director Marty Woll, N6VI -- who attended the Palmdale Planning Commission meeting along with about a dozen local hams and supporters -- ARRL General Counsel Chris Imlay, W3KD, wrote a lengthy letter to the City Attorney pointing out numerous flaws in the proposed ordinance and explaining why many of its provisions are void or unenforceable, being pre-empted by federal or state law."

In his letter, Imlay explained to the City that it is without authority to resolve RFI complaints; the jurisdiction is solely that of the FCC, as stated in the Communications Act of 1934, as amended. "The Federal Communications Commission has exclusive jurisdiction over radio frequency interference (RFI) matters, and technical matters specifically," he said.

Imlay pointed out that the "first specific concern in the draft ordinance is the statement that 'an Amateur Radio antenna, the operation of which causes unreasonable interference with electrical equipment in the surrounding neighborhood, is not compatible with that neighborhood.'"

This is "patently false," Imlay said, stating "there is no correlation between the presence of an outdoor Amateur Radio antenna, its height, configuration or placement and radio frequency interference (RFI) to home electronic equipment. As a matter of technical fact, the higher an antenna, the lower the electrical field in the horizontal plane of the home electronic equipment, and the less the likelihood of RFI in that equipment. Furthermore, the 'cause' of RFI is not the power of an Amateur Radio station, or the presence of an antenna, but rather the inability of home electronic equipment to reject unwanted signals. FCC regulations clearly obligate most home electronic equipment to accept any interference from licensed radio services as a condition of the permitted marketing and operation of that equipment."

Furthermore, in a Conference Report from the 97th Congress in 1982, Imlay explained that Congressional report "...is further intended to clarify the reservation of exclusive jurisdiction to the Federal Communications Commission over matters involving RFI. Such matters shall not be regulated by local or state law, nor shall radio transmitting

apparatus be subject to local or state regulation as part of any effort to resolve an RFI complaint. The Conferees believe that radio transmitter operators should not be subject to fines, forfeitures or other liability imposed by any local or state authority as a result of interference appearing in home electronic equipment or systems. Rather, the Conferees intend that regulation of RFI phenomena shall be imposed only by the Commission."

Saying that the Conference Report went on to clarify "that the exclusive jurisdiction over RFI incidents (including preemption of state and local regulation of such phenomena) lies with the FCC," Imlay told the City of Palmdale that "Obviously, state or local regulations based on interference from one radio service to another would directly frustrate the intention and goals of the Communications Act of 1934, as amended."

Imlay said that in 1985, the FCC said that the "federal power in the area of radio frequency interference is exclusive; to the extent that any state or local government attempts to regulate in this area, [its] regulations are preempted." Imlay explained that the FCC concluded that the Federal regulatory scheme is so pervasive that it is reasonable to assume that Congress did not intend to permit states to supplement it.

According to Shaffer, the City of Palmdale does not think antenna support structures are "compatible" with the town's image: "The Mayor told the Council that while, if a house was built that was not compatible with the neighborhood, they would not bulldoze it to the ground, this is 'just an antenna,' and they can get rid of it if they want to," Shaffer said.

* Going to Court

Norton said that the ARRL's Amateur Radio Legal Defense and Assistance Committee has voted to contribute $5000 toward the cost of Zubarau's lawsuit against the City of Palmdale. "More than $1500 has already been contributed by clubs and their members from throughout the Southwestern Division, and this contribution from the League-managed Antenna Defense Fund will further help defray the expenses of preparing for the February 2009 court date," Norton said. "Len Shaffer is performing the legal work pro bono, but even just compiling the record to present in court can be costly."

ARRL Defense Committee Chair Jay Bellows, K0QB, said that although the case has not yet reached the appellate level, "The egregious nature of Palmdale's actions -- including ordering removal of a previously approved antenna tower -- the potential impact on a large number of amateurs and the existence of substantial local financial support from the ham community were significant factors in the Committee's decision to provide support for this case."

Bellows said he has participated in nearly 100 tower and antenna matters, from working with local hams and municipalities on tower ordinances to individual tower issues including litigation at the local

and appellate level over the past 20 years. "If I've learned anything," he said, "I learned that a simple, clear explanation of who we are, what we do and why the antenna is needed are essential. Even if those steps are perfectly executed, the local authority (in this case, the City of Palmdale) has to be convinced that: 1. Federal law trumps the local zoning interests either generally or in the particular case; 2. The amateur is going to be politely persistent despite opposition from the locality; 3. The cost to the locality in time and treasure will exceed any political benefit in 'protecting its citizens from the scourge and despoliation of ugly Amateur Radio antennas.' Still, the single most important factor is that the amateur should always be the guy in the 'white hat,' no matter how reprehensible or offensive the actions of the locality or the opposing neighbors."

Norton went on to say that Woll has met with Palmdale hams and the management of the Palmdale Public Safety Department, who he described as "supportive of hams." Woll and Keith Hoyt, K6GXO, will meet with Palmdale's Planning Department and Assistant City Attorney in early January. "The proposed ordinance has been the subject of considerable discussion in Amateur Radio circles," Norton said. "Local hams, [as well as] Division and National League representatives are devoting considerable time and effort toward resolving the issue."

==> HAMS STAND BY TO HELP AS NEW ENGLAND RECOVERS FROM ICE STORM AND PREPARES FOR MORE

The major ice storm that hit New England December 11 has pretty much gone away <http://www.arrl.org/news/stories/2008/12/15/10506/?nc=1>, but with forecasters calling for more winter weather in the next few days, hams are still on the job. During the storm, Amateur Radio operators from all over the area responded to calls for assistance from various served agencies, and local leadership does not expect the need for the hams to lessen anytime soon.

According to Eastern Massachusetts Section Emergency Coordinator Rob Macedo, KD1CY, almost 400,000 customers in Massachusetts lost power at the height of the storm. Phone service, particularly landline service, was disrupted in some areas. Crews have been working hard to restore power to residents, Macedo said: "As of late Sunday evening, almost 140,000 were without power in Massachusetts with over double that number in New Hampshire. On Wednesday, the number of homes without power had dropped to 45,000-50,000 in both states." Southern New England received 2-4 inches of rainfall; isolated higher amounts caused river, stream and urban flooding. Strong winds in the region resulted in tree and wire damage, as well as coastal flooding along the shoreline.

In Western Massachusetts, Section Emergency Coordinator John Ruggerio, N2YHK, reported that ARES units in his Section responded to calls for assistance from local EOCs. "EOC operations in Worcester were secured on Monday evening, as the shelters were closed and power was restored to most areas at that time," Ruggerio said.

"Amateur Radio operators from the North and South Shore of Eastern Massachusetts assisted with operations in Western Massachusetts, fulfilling needs from Saturday night into Monday morning," Ruggerio recounted. "ARES units in the Western Massachusetts Section provided support during the day on Monday for the town of Gardner in Franklin County. An additional team from Eastern Massachusetts -- including one ham from the Rhode Island/Massachusetts border -- came in on Monday evening. That team helped out in Gardner until 12:30 Tuesday afternoon when the shelters and communications for the local hospital were no longer required, as power was restored to much of the area."

Ruggerio said that the local hospital in Gardner lost phone service for much of the day starting Monday morning. "They got service back later that evening, but until then, Amateur Radio was the only means of two-way communications between the hospital and EOC." Message traffic on prescription fills and other priority, but non-emergency traffic, were fulfilled during that timeframe, he said.

"The Gardner operation was the largest Amateur Radio Emergency Services Mutual Aid Team (ARESMAT) that Eastern Massachusetts ARES has supplied since the September 11 terrorist attacks," Macedo said. "Including the one amateur provided for the Worcester EOC, a total of 16 hams assisted for all the ARESMAT needs in Western Massachusetts."

Macedo said the ARES unit in Franklin County completed its support in the town of Heath on early Monday Morning: "Many of the Franklin County ARES team also assisted with Gardner, providing an additional seven hams to the operation. More than 200 man-hours were logged just in the Gardner ARESMAT alone -- this does not include State Emergency Operations Center operations or the National Weather Service response phase operations."

Support for the Massachusetts State Emergency Operations Center also continues, Macedo said. "Massachusetts State RACES Radio Officer Tom Kinahan, N1CPE, told us that support was required at least through Wednesday evening for the aftermath of the storm. We will continue to provide support for as long as requested to support the State EOC." Eastern Massachusetts ARES supplied three Amateur Radio operators to support the state EOC during the storm.

Throughout the storm, Section leadership from across the region met in twice-daily conference calls with ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD. In a call on Tuesday, New Hampshire Assistant Section Emergency Coordinator David Colter, WA1ZCN, told Dura he had just got his power back early that morning. "I spoke to the ECs for Hillsborough and West Rockingham Counties last night," Colter said, "and they continue to staff two shelters and EOCs. Apparently, neither site has an available landline. There is cell service in the area, but it's spotty. The Milford animal shelter folks have been using ham radio for coordination in a limited way for several days as they retrieve chilly animals. The temporary animal shelter is co-located at the Milford people shelter."

According to American Red Cross Communications Volunteer Tom Carrigan, NE1R, the Disaster Operations Center (DOC) at the Central Massachusetts Chapter of the American Red Cross is a "beehive of activity trying to cover all the demands for services from the many towns still operating shelters and for mobile feeding operations throughout the affected area. We are still sending cots and blankets, as well as water, heater meals and snacks to New Braintree, and other towns. Nearly every Worcester County town north of Worcester and west of the Wachusett Reservoir has received services from the ARC. Mobile feeding has continued in Worcester, Paxton, Rutland, Gardner, Leominster and many other communities where utility workers and public safety workers have been working long hours outdoors. Several shelters have been supported by Red Cross volunteers during the over-nights, as well as days, and Red Cross volunteers from Massachusetts, Connecticut, Pennsylvania and New Jersey have joined the effort."

Carrigan said that as "thousands of people remain without electric power as the weather turns colder and messier, we expect that some who have been toughing it out at home may give in and come to a shelter."

Macedo noted that the bad weather is just beginning for New England, as the active storm pattern shows no signs of abating: "Another major winter storm is expected on Friday that could dump a significant amount of snowfall on the region. Another major storm is also possible Sunday night into Monday. We have been advised that the State EOC could be back in operation on Friday and we are preparing staffing for those needs. We will leave ARES on standby status through Monday, pending the impact of these storms on our region, as well as the weakened infrastructure that remains from the impact of the ice storm."

==> 75TH SWEEPSTAKES MUG, PIN ORDERS ACCEPTED THROUGH JANUARY 31, 2009

The dust has settled from the 2008 ARRL November Sweepstakes and the log submission deadline has passed. How did you do? If you submitted a log with more than 100 QSOs, you qualify for a Sweepstakes Participation pin! If you submitted a log with a Clean Sweep -- working all 80 ARRL/RAC sections -- you qualify for a Clean Sweep coffee mug! According to ARRL Contest Branch Manager Sean Kutzko, KX9X, pins and mugs have a long-standing tradition as trophies in the November Sweepstakes. "This year's participation pin will feature the colorful 75th year logo," he said. "They are stamped with either CW or SSB, so be sure to tell us what mode you want in your order. The Clean Sweep mugs this year are quite special indeed; for the 75th running, this year's mugs are fine etched glass and will really stand out on your shelf or operating desk. We won't be offering etched glass mugs again anytime soon, so these are truly collector's items."

If you would like to order a Sweepstakes pin or mug, you can either send a copy of your Sweepstakes summary sheet (if you filed a paper log) or a copy of the first page of your Cabrillo file (if you submitted an electronic log via e-mail) with your check for the correct amount by January 31, 2009. You can also call Kutzko at 860-594-0232 and he can take your credit card information over the phone. Sweepstakes

Participation pins are $6; Clean Sweep mugs this year are $16. All costs include shipping charges.

Kutzko advises that these items are not in stock. "We will make our order to our supplier once we know how many requests we have," he explained. "Mugs and pins will likely be shipped in late March. The 75th running of the November Sweepstakes was a great event, with lots of participation and fun! Be sure to commemorate your effort with a pin or mug this year. All orders for Sweepstakes mugs and pins must be received by January 31, 2009."

==> ARISS FINALIZES PLANS FOR SILVER ANNIVERSARY OF AMATEUR RADIO FROM SPACE

The Amateur Radio on the International Space Station (ARISS) <http://www.rac.ca/ariss/oindex.htm> team is currently celebrating the silver anniversary -- 25 years -- of Amateur Radio operations from space. According to ARISS International Chairman Frank Bauer, KA3HDO, the crew on the International Space Station (ISS) has configured the radio to support cross-band repeater operations. They have also supported some SSTV downlinks and participated in a special test of 9600 baud packet radio operations on the simplex frequency of 145.825 MHz. After December 19, Bauer said he expects the ISS ham radio system to be on the 145.825 MHz frequency supporting 1200 baud packet. If PCSAT is configured during the week, he said double hop APRS is possible.

"During the week of December 21-26, we plan to support the cross-band repeater mode with a twist," Bauer said. "Our intent is to configure the radio for 145.99 MHz uplink -- including CTCSS tone of 67.0 and 437.80 MHz down. This will be performed in low power mode. We should also note that an extra-vehicular activity (EVA) is planned for that week -- Expedition 18 Commander Mike Fincke, KE5AIT, and Flight Engineer Yury Lonchakov, RA3DT, plan to perform a spacewalk on December 22. As per standard procedure, the ISS ham radio system will be turned off for the EVA."

Bauer said that from December 28-January 3, the cross-band repeater will be reconfigured for what he called "a special experiment. This will be a test of our L-Band uplink capability, which, to date, has not been proven out. Plan for an uplink of 1269.65 MHz and a downlink on the standard frequency of 145.80 MHz, using low power," he said. "Given the substantial cable losses of the L-band system, we hope some 'big guns' are able to penetrate through, keep up with Doppler and make the connection."

A special certificate is being developed for those who communicate with the ISS from November 30, 2008 to January 15, 2009. This certificate will be awarded to those who have had two-way communications with the ISS on voice, packet (APRS) or through the voice repeater. Those who hear the ISS from space in any of the ARISS operations modes -- voice, SSTV, school contact, voice repeater or digital - will also be eligible to receive a certificate.

To receive the certificate, Bauer said to note the ARISS mode of operation (such as SSTV, voice or school) on your QSL and whether the contact was one-way (receive only) or two-way. "You should send your self-addressed, stamped envelope to the normal ARISS QSL volunteer distributor in your area of the world," he explained. "On the outside of the QSL envelope, please include the words '25th Anniversary Certificate.' Make sure your envelope is big enough to accept an 8.5 x 11 inch certificate and includes the proper postage." If you do not know where to send your QSL, check the ARISS Web site <http://www.rac.ca/ariss/oindex.htm#ARISS_Update--25th_Anniversary_of_Ham_Radio_in_Space> to find the one that serves your part of the world.

"We will be sending your certificate to the volunteer distributors in bulk after the event is over," Bauer said. "This saves workload and money. So do not expect to see it until 1-2 months after the event closes on January 15."

Bauer reminded hams that due to ISS flight requirements related to spacewalks and vehicle activity, the radio onboard the ISS may be off for some portion of this schedule. School contacts and general QSO opportunities by the crew will also preempt this schedule for short periods of time. "But remember that if you hear these," he said, "you still qualify for a commemorative certificate. Enjoy the ARISS ops on ISS!"

==> FREQUENCY CHANGE FOR CANADIAN TIME TRANSMISSION STATION CHU

After 70 years of broadcasting Canada's official time, the National Research Council's shortwave station CHU <http://inms-ienm.nrc-cnrc.gc.ca/time_services/shortwave_broadcasts_e.html> will move the transmission frequency for the 7335 kHz transmitter to 7850 kHz. The change goes into effect at 0000 UTC on January 1, 2009.

Broadcasting 24 hours a day, CHU is a part of NRC's system for disseminating official time throughout Canada. Listeners hear tones to mark the seconds, a voice to announce the time in French and English and digital data to set computers. The atomic clocks at CHU are part of the ensemble of clocks in the time and frequency research laboratories at the National Research Council Canada in Ottawa. The NRC clocks are used in conjunction with clocks in the time laboratories of other countries to construct the internationally accepted scale of time, UTC (Coordinated Universal Time). Time transmissions on 3330 and 14670 kHz are not affected and will continue as before.

In April 2007, the ITU reallocated the 7300-7350 kHz band from the fixed service to the broadcasting service. Since then, the NRC said there has been a lot of interference on the 7335 kHz frequency from many information broadcasters around the world. "CHU listeners in Canada and around the world who have for so long considered the 7335 kHz frequency exclusively for time signals, are very vocal about this interference," said Raymond Pelletier, Technical Officer at the NRC-Institute for National Measurement Standards, who oversees the CHU facility. "We have heard from Amateur Radio operators, watchmakers, astronomers and

navigators who use the tones and voice signals. We also received comments from those who use the carrier as a calibration source at a distance for their equipment."

Pelletier noted that a leap second <http://inms-ienm.nrc-cnrc.gc.ca/faq_time_e.html> will be added at the end of December 2008; this will be indicated in the digital code until the time of the leap second. DUT1 will go from -0.6 to +0.4 seconds and will be indicated by double tones near the start of the minute and in the broadcast code <http://inms-ienm.nrc-cnrc.gc.ca/time_services/chu_e.html>.

==> NEW SECTION MANAGER APPOINTED IN ARKANSAS

J.M. Rowe, N5XFW, of Hot Springs, has been appointed as the new ARRL Arkansas Section Manager with a term to begin on December 22, 2008. Rowe is taking over the Section Manager reins from David Norris, K5UZ, who was elected Vice Director of the ARRL Delta Division in November; Norris assumes his office on January 1, 2009.

When Norris announced that he was stepping down from the Section Manager post he has held since April 2005, he recommended Arkansas Section Emergency Coordinator Rowe for the position. Rowe was already scheduled to become Arkansas Section Manager on April 1, 2009, since he was the only nominee for the next term of office when the petition deadline passed on December 5.

According to the Rules and Regulations of the Field Organization, when a vacancy in the office of Section Manager occurs between elections, the position is filled by appointment by the Membership and Volunteer Programs Manager, in consultation with the Director. MVP Manager Dave Patton, NN1N, consulted with outgoing Delta Division Director Henry Leggette, WD4Q, and with Mickey Cox, K5MC, the incoming Delta Division Director; Cox, like Norris, will begin his term January 1, 2009.

Rowe has been Arkansas Section Emergency Coordinator for nearly four years. He was first appointed Emergency Coordinator in 2000 and was promoted to District Emergency Coordinator in 2001, a position he continues to hold. Rowe also served as an Assistant Section Manager from 2002-2005. Rowe's term of office as Section Manager continues through March 31, 2011.

==>SOLAR UPDATE

Tad "We twa hae paidl'd in the burn frae morning sun till dine" Cook, K7RA, this week reports: Last week's sunspot group was only visible for three days, December 10-12. The average daily sunspot number for all of 2007 was 12.8; if we see no sunspots for the rest of 2008, the average for this year will be 4.7. By comparison, the yearly averages of daily sunspot numbers during the last solar minimum (1995-1997) were 28.7, 13.2 and 30.7. This solar minimum is much lower than the one about 12 years ago. Sunspot numbers for December 11-17 were 12, 14, 0, 0, 0, 0 and 0 with a mean of 3.7. The 10.7 cm flux was 70.2, 71, 69.7, 68.8,

68.9, 69.4 and 68.8 with a mean of 69.5. The estimated planetary A indices were 3, 2, 1, 0, 1, 4 and 5 with a mean of 2.3. The estimated mid-latitude A indices were 4, 2, 1, 1, 1, 4 and 3 with a mean of 2.3. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Robert Burns' "Auld Lang Syne" <http://www.rabbie-burns.com/the_poems/auldlangsyne.cfm.html>.

==>IN BRIEF:

* This Week on the Radio: This week, the AGB-Party Contest and the Russian 160 Meter Contest are on December 19. The OK DX RTTY Contest and the Feld Hell Sprint are December 20. On December 20-21, look for the International Naval Contest and the Croatian CW Contest to be on the air. The Lighthouse Christmas Lights QSO Party starts December 20 and goes through January 4. The ARCI Holiday Spirits Homebrew Sprint is December 21, the Run for the Bacon QRP Contest is December 22 and the SKCC Sprint is December 24. Next week, the DARC Christmas Contest is December 25 and the RAC Winter Contest are December 26. On December 27-28, look for the Stew Perry Topband Challenge and the Original QRP Contest to be on the air. The RAEM Contest is December 28. The SARTG New Year RTTY Contest and the AGCW Happy New Year Contest are both on January 1. Looking ahead, the ARRL RTTY Roundup and the EUCW 160 Meter Contest are on January 3-4. The Midwinter Contest (CW) is January 10 and the Hunting Lions in the Air Contest, the MI QRP January CW Contest and the North American QSO Party (CW) are all on January 10-11. The SKCC Weekend Sprintathon, the NRAU-Baltic Contest (CW), Midwinter Contest (Phone), the NRAU-Baltic Contest (SSB) and the DARC 10 Meter Contest are scheduled for January 11. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, December 21, 2008, for these online course sessions beginning on Friday, January 2, 2009: Amateur Radio Emergency Communications Level 1, Radio Frequency Interference, Antenna Design and Construction, Technician License Course, Analog Electronics and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may

access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cep@arrl.org>.

* ARRL Headquarters Closed for Christmas, New Year's Holidays: ARRL Headquarters will be closed Thursday, December 25 and Thursday, January 1 in observance of Christmas and New Year's Day. There will be no W1AW bulletins or code practice transmissions those days. There will be no ARRL Letter or ARRL Audio News on Friday, December 26 or January 2. Headquarters will be open during regular business hours on Friday, December 26 and Friday, January 2. We wish everyone a safe and joyful holiday season and a prosperous 2009.

* The January/February NCJ Hits the Streets: The current issue of NCJ is loaded with everything today's contester needs. After you check out a solution for a vertical array for your next DXpeditions, take a peek inside the files of the N3HBHX antenna case in Maryland. Discover why nylon rope can be a contester's best friend and how an inexpensive gain antenna can help. We're all getting older -- how is your age affecting your score? When will propagation allow US amateurs to get to Europe on 10 meters? All this and more in the January/February issue of NCJ. NCJ is published by the ARRL and is a bi-monthly publication; it is edited by Al Dewey, K0AD. Subscribe at <http://www.arrl.org/ncj/>.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

>the contacts needed?

My $0.02 worth is that in cases like the County Hunters' net, which is more of a social group than a real award-earning effort, I don't mind there being a centralized place for people to gather to pick up the QSOs they need. (It would probably be difficult to run across 3,000 counties without it!) But for the most part, I think nets are a cop-out. I don't know the details about the net you cited from the news story, but I got a Bicentennial WAS award with my porch awning antenna, so it wasn't very hard to do!

1129. SHE CUE, SHE CUE, SHEESH, OOPS! HIC!*&%

Newsgroup: rec.radio.amateur.moderated
Date: 2008-12-22 05:41:48 UTC
From: KØHB <kzerohb@gmail.com>
Message-ID: <gin9af$a09$1@news.motzarella.org>
Source record: 2300

Dear Friends,

It becomes my painful duty to write you a letter
of apology instead of sending you the Christmas remembrance
that I had intended for you.

Knowing so well the appetites, likes and dislikes
of my close friends, I made up a list of twelve of my best
friends and went down and bought twelve quarts of "Royal
Canadian" seven-year-old whiskey. Nothing but the very
finest for my friends. I took this home and put it in my
closet and intended to put it up in nice Christmas packages
and send it out to you just before Christmas.

My wife, K0CKB, got to fumbling around in the
closet and found the liquor and didn't understand just
what I intended to do with it. So she came up and told
me to empty the contents of every bottle down the sink,
or else. So I proceeded with the unpleasant task.

I withdrew the cork from the first bottle and poured
the contents down the sink, with the exception of one glass
which I drank. I extracted the cork of the second bottle
and likewise poured the contents down the sink, with the
exception of the glass which I drank. I pulled the sink from
the next bottle from the cork of the next and drank one sink
out of it and threw the rest down the glass. I pulled the
sink out of the next glass and poured the cork from the bottle.
Then I corked the sink with the glass, bottled the drink and
drank the pour.

When I had everything emptied, I steadied the house
with one hand and counted the bottles, corks, glasses, and
sinks with the other, which were twenty-nine. And, as the
houses came by, I counted them again and finally had all
the houses and bottles and corks and glasses and sinks counted,
except one house which I drank.

So this accounts, dear friends, for your not
receiving a more stimulating Christmas present than this
letter. I sincerely hope that from some other source you
get all the joys and happiness that come from Christmas
remembrances.

"May the Lord take care of you, but not too soon."

73, Hans, K0HB, & Colleen, K0CKB

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Amateur Radio Newsline" Report 1637 - December 26, 2008

Ladies and gentlemen, once again with thank-you's to those listeners who have supported these newscast in the past year, here is Amateur Radio Newsline's Support Fund Administrator, Andy Jarema, N6TCQ.

--

In the month of April, besides some of our monthly contributors we heard from Dr. Eric Stoll, K2TO of Teaneck NJ, Frank Donough, W3PMV of Monroeville, PA, Lloyd Willever, K9LJW in Fishers, IN. Tom Hise, NC0O of Shellsburg, IA. And Steven Blaisdell, W0PER in Englewood, CO.

Moving to California, Steven Gibson, K6KGO in Lake Almanor, with a very pretty card, Ray Day, N6HE and Donna, W6DLD in Rancho Palos Verdes, Steven Rhodes, KF6JIN in Orange, The Western Amateur Radio Association in Fullerton and Alvin Borne, W6IVO in Hermosa Beach. Via PayPal there was. Adalberto Castelo.

It's appropriate that we heard from these people in April, as I'm sure some had just completed their taxes. No doubt a number of you thought that you'd better increase your deductions for 2008. Well, the end of the year is fast approaching, and you still have time to pen that check or get online to our website: arnewsline.org and do it through PayPal. Newsline is a 501(c)3 not-for profit organization, and your donations are tax-deductible.

I'm Andy Jarema, N6TCQ, sending you the best wishes for a new year.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1637 with a release date of Friday, December 26th, 2008 to follow in 5-4-3-2-1.

The following is a QST. The future of a famed New York City ham radio exhibit is in doubt as the Hall of Science tells its radio club namesake to get ready to move out. Also, wireless headphones are confiscated after they are found to be jamming a repeater and the North Pole Network activates to help jolly old Saint Nick. Find out the details on this year end edition of the Amateur Radio Newsline" in report number 1637 coming your way right now.

RADIO IN THE PUBLIC EYE: NYC HALL OF SCIENCE TO OUST ITS NAMESAKE HAM RADIO STATION

The future of WB2JSM, the club station operated inside New York's Hall of Science museum is cloudy. This, after the group which operates it gets an order to begin dismantling it. Amateur Radio Newsline's Mark Abramowicz, NT3V, has the story:

--

Thomas Tumino, N2YTF, who is taking the reins as president of the Hall of Science Amateur Radio Club in New York, doesn't want to have the distinction of being the last president of the organization.

Tumino been a member and officer for a number of years and has been serving as a volunteer at the WB2JSM operation inside a building in Flushing Meadows on the site where the World's Fair was held in the mid-1960s.

Tumino, who has been vice president of the group for the past year, got word from the president of the New York Hall of Science that repairs to the roof would require the temporary removal of the club's antennas.

Tumino says the the group moved antennas during the summer to the ground and continued operating. Then, the club received blueprints to mark out new locations on the roof for new antennas.

Tumino says all looked good until about two weeks ago when he was summoned to a meeting where the group was told because of renovations there was no room for amateur radio inside the museum.

To say he and the club were shocked by the news might be an understatement.

"We asked several times why there was no more space in the museum," says Tumino. "We were told there was a renovation going on and that because of the renovation there was limited space in the museum.

"And I asked if we could return once the renovation was complete and they said, no."

Tumino says he pressed further and was told there was an avenue of appeal.

"We were told we could appeal it to the museum president, the new museum president, and she has granted us a meeting for the first week in January," Tumino says.

She is Dr. Margaret Honey, the new president and chief executive officer of the New York Hall of Science.

Tumino says he plans to make a case to her that amateur radio - from CW to SSB, PSK-31 and EchoLink, IRLP and working through satellites - should be an important part of the museum's exhibits.

Tumino says the New York Hall of Science is missing a golden opportunity. He says science museums in the U.S. and Canada with amateur radio stations are promoting them and using them as part of their programs.

"Those museum stations are promoted by their museums and cherished by their museums in a way that the shows that their museum staffs have great vision and a great sense of marketing," Tumino says. "And, I think for the past

several years at the Hall of Science, I don't think management has really had that kind of vision.

"When the Hall of Science Radio Club runs a JOTA station - Jamboree on the Air station - it is just the radio club that publicizes the event. Same with our Field Day, same with Kids' Day. The museum does not publicize these events, we're not included on their website."

He's right. WB2JSM isn't even listed on the museum's website. It, ham radio or amateur radio, doesn't even come up on a keyword search on the site.

Tumino says the club has launched a petition campaign on the web and is asking for electronic signatures at www-dot-tinyurl-dot-com forward slash h-o-s-a-r-c. (www.tinyurl.com/hosarc).

If you didn't get that address, you can go to the text version of this week's show to find it.

There have been hundreds of signatures already posted and lots of comments as well.
Tumino says there's also a box on the site that asks for other contributions.

"I'm asking for thoughtful comments as to why we should involve our children in amateur radio to show how important amateur radio is in children's science education," Tumino says.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

We'll have a follow-up report on the future of the Hall of Science ham radio station in the coming weeks. (ARNewsline")

**

ENFORCEMENT: WIRELESS PC HEADPHONES INTERFERE WITH VK REPEATER

From down-under comes word that Australia's telecommunications regulator ACMA has confiscated a consumer device that was wreaking havoc on a 2 meter repeater. The unit turned out to be a pair of wireless headphones, with a talk back-channel, designed to be used with a PC online.

The headphones carried a brand label Omni model WEP-910D. It turned out that they use the 2 meter frequency of 147.000 MHz as to deliver audio to the headphones. This explains why hams in range of the repeater being jammed heard endless hours of whatever was being processed through the offending PC's sound card.

Now, here's the kicker. Not knowing that the unit was in a ham radio band the users of these headphones complained that on some occasions they heard "voices talking to them" on their personal computer system.

As there may be more of these units in use anywhere in the world, hams need to keep an ear out for them. Most appear to operate on 147.000 MHz +- about 15 kHz, so users listening to repeaters on or near 147.000 MHz are

more likely to be affected by these units. (WIA News)

**

DXCC NEWS: MOUNT ATHOS WANTS HELP KEEPING SY PREFIX

A decision by Greek telecommunications authorities may cause confusion in then DXCC program and the Monks at Mount Athos monastery are asking your help to sort it all out.

According to Monk Appolo, a recent change in regulations made by the Greek Ministry of Communications has re-designated the longtime Mount Athos SY prefix to special call status and has made it available to any Greek ham who wants it. Monk Appolo says that those at the Ministry do not understand the importance of Mount Athos as a separate DXCC entity to the world of amateur radio and to the DXCC program itself. .

To help reverse the decision, Monk Apollo is asking hams world-wide to send an email to the Greek telecommunications ministry at yme@otenet.gr. He says to request that they act to once again reserve the SY prefix solely for the use of Mount Athos. This, to eliminate any confusion to the DXCC

RADIO IN SPACE: SATELLITE CONFIRMS CRACKS IN EARTS MAGNETIC SHIELD

Recent satellite observations have revealed the largest breach yet seen in the magnetic field receded to date.

Scientists have long known that the Earth's magnetic field is similar to a drafty old house that sometimes lets in charged particles from the sun. These breaches cause the brilliant auroras but can also disrupt satellite and ground communications.

The discovery was made last summer by a fleet of five small NASA satellites known as Themis. Their observations showed the Earth's magnetic field occasionally develops two cracks that allows a stream of charged particles spewing from the sun to penetrate the Earth's upper atmosphere.

Last summer, Themis calculated a layer of solar particles to be at least 4,000 miles thick in the outermost part of the Earth's magnetosphere. This is the largest tear of the planets protective shield found so far.

**

HAM RADIO IN SPACE: W5KWQ TALK ABOUT HIS ARISS EXPERIENCE

Space traveler Richard Garriott, W5KWQ, ha been interviewed by science fiction writer Tracy Hickman about Garriott's recent visit to the International Space Station. During the session, W5KWQ talked about his experience of operating amateur radio on orbit and conversing with the ham community worldwide.

The entire interview is 2 hours and 45 minutes in duration. Its available in 3 installments. You will find it at

http://feeds.feedburner.com/Dragonhearth (Southgate)

**

BREAK 1

With sleigh bells in the air and a hearty ho-how-ho, from the United States of America, I'm Don Wilbanks, AE5DW, and this is the holiday 2008 edition of the Amateur Radio Newsline. Its being heard on bulletin stations around the world including the W4BS repeater serving Memphis, Tennessee.

(5 sec pause here)

**

PUBLIC SERVICE: THE WARNER ROBINS SANTA PATROL

Hams in Warner Robins, Georgia calling themselves the Santa Patrol have received praise from a local newspaper. This, for their work with police and 911 dispatchers to offer extra sets of eyes and ears to law enforcement during the holiday season. Bill Pasternak, WA6ITF, is in the Newsroom with more:

--

According to a Macon Sun News story, the 15 member radio equipped group calling itself the Santa Patrol spreads out mostly in store parking lots. There they monitor the surroundings looking for suspicious activity during the holiday season. They are especially on the lookout for people who appear to be following shoppers out to their cars or folks going through parking lots peering into car windows.

The majority of Santa Patrol members simply sit in their vehicles and watch. For the most part they look like a typical husband waiting on his wife to come out of the store.

But some members are more visible. These hams walk through the parking lots with his hand-held radio in plain sight. If they spot someone suspicious they radio back to a ham stationed at the Houston County 911 Center, where the sheriff's office has a desk set up for the Santa Patrol. The 911 operators and police then decide whether to send out a police officer.

For the Amateur Radio Newsline, I'm Bill Pasternak, in the Newsroom in Los Angeles.

--

The complete article on the Warner Robins ham radio Santa Patrol including quotes from some of the ham operators involved makes great reading. Its on-line at www.macon.com/197/story/563630.html (Macon On Line)

**

RESCUE RADIO: FEMA ANNOUNCES IPAWS CONTRACTOR HUNT

The Federal Emergency Management Agency is looking for vendors to help implement the future generation version of Emergency Activation System better known by the acronym EAS.

FEMA recently published a request for information on implementing the Integrated Public Alert and Warning System known by its own acronym of IPAWS. According to the news release IPAWS will use mobile media such as cell phones, pagers, laptop computers and other personal communications devices to warn people of dangerous situations. This through live or pre-recorded audio, video and text messages in multiple languages and with support for American Sign Language and Braille.

Responses to the government solicitation are due by January 30, 2009. A fascinating article about the IPAWS system and its role in future rescue radio operations is on-line at www.fema.gov/emergency/ipaws/#0 (FEMA, RW)

**

TELECOM LAW: DEMOCRATS MAY SEEK EXPANDED FAIRNESS DOCTRINE

According to news reports Republican Minority Leader John Boehner is concerned about Democratic Representative Anne Eshoo's statements to the Palo Alto Daily Post. This, where Eshoo says that she will push Congress to reinstate and expand the so-called Fairness Doctrine to other FCC regulated services. Bruce Tennant, K6PZW, has more:

--

The Fairness Doctrine was a policy of the Federal Communications Commission that for many year s. It required the holders of broadcast licenses both to present controversial issues of public importance and to do so in a manner that was in the Commission's view honest, equitable, and balanced. It was scrapped by the FCC as unconstitutional in 1987. Congress tried to revive it, but President Ronald Reagan vetoed it once and pledged at the time that he would block it again if congress tried to re-impose it.

The doctrine's demise is credited with the rise in conservative talk radio. Hosts including Rush Limbaugh and Mark Levin have expressed concerns that the new Democratic controlled Congress will try to reinstate the doctrine as a way to silence its critics.. The office of House Speaker Nancy Pelosi has also raised the idea of its return.

President-elect Barack Obama has twice told Broadcasting and Cable Magazine that he is opposed to its return. Boehner has now called on him to speak out against any congressional effort to limit free speech.. Regardless, Eshoo says that he will work on bringing it back adding that she would want it to apply to other services rather than just radio and television.

For the amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The Fairness Doctrine should not be confused with the Equal Time provision. The Equal Time rule only deals with giving the same access to the airwaves

to political candidates running for office. (Published news reports)

**

D-STAR NEWS: ANOTHER NEW MACHINE ON THE AIR IN THE UK

D-Star continues to grow in popularity as an alternative to analog F-M for ham radio utility communications. No where is more evident than in the United Kingdom where the start-up of yet another D-Star repeater has been announced with more than a bit of fanfare.

This one is in London and operates under the callsign GB7OK. The system is located in Bromley. It has an output on 145.7125 MHz and the input 600 kHz lower on 145.1125. The new machine serves both greater London and Kent and is being called by some as an early Christmas present to the hams of that region. (Southgate)

**
EMERGING TECHNOLOGY: THE FUTURE IS LED LIGHTING

Science OnLine says that innovations in photonics and solid state lighting will lead to trillions of dollars in cost savings, along with a massive reduction in the amount of energy required to light homes and businesses around the globe. This, according to a paper published by two professors at Rensselaer Polytechnic Institute.

The paper suggests that a new generation of illuminating devices based on light-emitting diodes or LED's will supplant the common light bulb in coming years. In addition to the environmental and cost benefits of LEDs, the technology is expected to enable a wide range of advances in areas as diverse as healthcare, transportation systems, digital displays, and computer networking.

Researchers say that they are able to control every aspect of light generated by light-emitting diodes, allowing the light sources to be tweaked and optimized for nearly any situation. In general LED's will require 20 times less power than today's conventional light bulbs, and five times less power than compact fluorescent lamps. (ScienceOnLine)

**

EMERGING TECHNOLOGY: FOX TV TO GO ALL HD BY 2010

Fox's television network group plans to distribute all of its cable and networks exclusively in high-definition within two years. It will also eliminate standard-definition feeds with an infrastructure upgrade the company expects will double its satellite capacity.

As part of the project, Fox will convert its encoding and satellite transmission infrastructure to Motorola equipment, covering all cable networks and the national broadcast network. The change will require all cable, satellite and other distributors to install new satellite receiver and decoder units from Motorola, although Fox for the time being will continue to offer the high-definition feeds in the widely used MPEG-2

encoding format.

Fox will begin the switch to the Motorola-based high definition gear on March 1, 2009. Its aiming to migrate all networks by the end of 2010. (MultiChannel News)

**

HAM HAPPENINGS: CTU 2009 DAYTON REGISTRATION.

Turning to the ham radio social scene, word that Contest University 2009 registration is now open.

The event is slated for on Thursday, May 14th, 2009 in Dayton, Ohio a day prior to the opening of the Dayton Hamvention. It features some of the best contest operators and station builders as teachers. They will present state of the art contesting in way to increase your knowledge and fun.

Again this year the events primary sponsor will be Icom America. Others supporters include CQ Magazine, DX Engineering, Comtek Systems, SuperBertha Antennas and W9ZRX.

This day long event is one that any ham into radio sporting won't want to miss. For Contest University 2009 registration please visit www.contestuniversity.com on the World Wide Web. (Press release)

**

HAM HAPPENINGS: STRAIGHT KEY NIGHT ON OSCAR 2009

Ray Soifer, W2RS extends an invitation to all radio amateurs worldwide to participate in AMSAT's Straight Key Night on OSCAR 2009.

The event takes place between 0000 and 2400 UTC on January 1st, 2009. Its C-W only and you must use a straight hand key.

Participating is easy. There really are no rules, no scoring and no need to send in a log. Just operate CW through any OSCAR satellite and have a good fun and safe New Years Eve. (ANS)

**

NAMES IN THE NEWS: N5XFW IS NAMED NEW ARKANSAS SM

J.M. Rowe, N5XFW, of Hot Springs, has been appointed as the new ARRL Arkansas Section Manager with a term that began on December 22nd. He takes over the Section Manager reins from David Norris, K5UZ, who was elected Vice Director of the ARRL Delta Division in November. Norris assumes his office on January 1st, 2009. (ARRL)

**

BREAK 2

Wishing you a joyous holiday season. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only

official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: HIGH POWER AUDIO TO THWART PIRATES AT SEA

A British firm is spearheading use of a high-tech "sonic laser" to beat bandits on the high seas. Burt Hicks, WB6MQV, has the details on this new media based unit:

--

About the size of a domestic satellite dish, the long range acoustic device blasts the target with a precise beam of sound. This could include warning messages, noise or sirens that can be tuned to excruciatingly painful levels should an attacker get too close.

The sound source for the unit is any standard off the shelf MP3 player. The device has shown to be very effective at up to 1,000 meters and excruciating if you get within 100 or 200 meters. At full power it would result in permanent hearing damage.

For the Amateur Radio Newsline, I'm Burt Hicks, WB6MQV, in Los Angeles.

--

According to reports, the device has been tested in an actual attack and the pirates were driven off. (WIA News)

**

RADIO IN SPACE: NEXT LUNAR LANDER MISSION DELAYED TWO YEARS

Another wait before there will be more pictures radioed back to Earth from Mars. This as NASA says that it will delay the launch of the next-generation Mars rover two years due to technical difficulties and cost overruns. Jim Meachen, ZL2BHF, has the details:

--

The mission, which was originally scheduled for late next year, is now slated for 2011. This next generation of automated explorer will be known as the Mars Science Laboratory. Its primary mission will be to try to determine habitability on Mars now and in the past.

According to a report in The Los Angeles Times, the new target date was the earliest available because missions to Mars can only be launched every 26 months when the Earth and Mars are properly aligned. In the interim, NASA says that it plans to try to contact the Phoenix lander in the Martian springtime.

The Phoenix, which landed on Mars last May, last communicated with the Mars Odyssey orbiter on November 2nd. That's when it lost power and shut down

due to sub-freezing temperatures on the red planets surface.

For the Amateur Radio Newsline, I'm Jim Meachen, ZL2BHF

--

If NASA can revive the Phoenix, it will have a continuing flow of Mars data until the next probe arrives. (NASA)

**

WORLDBEAT: SOUTH AFRICA ON TRACK FOR EXPANDED 40 METER BAND

The South African Radio League has received assurances from that nations telecommunications regulator that the issue of making 7 100 to 7 200 kHz available to radio amateurs as of March 8, 2009, should be finalized by the end of January.

The various changes have been included in the South African national table of frequency allocation. Its expected to be published for comments in the near future.

In the final process, the Minister of Communication will have to approve the table of frequency allocation before it is implementation. The new rules also will carry a correction of the Zed R allocation in the 20 meter band. (Southgate)

**

WORLDBEAT: 17TH IARU REGION 1 ARDF GAMES ANNOUNCED FOR BULGARIA

The Bulgarian Federation of Radio Amateurs will host the 17th IARU Region 1 ARDF Championships to be held in Bulgaria September 16th to the 21st. The group is inviting Amateur Radio Direction Finding teams from IARU Region 1 and guests from around the world to participate in the event. The Bulgarian Federation of Radio Amateurs also notes that this event also marks the anniversary of 50 years of Amateur Radio Direction Finding activity in Bulgaria. It began way back in 1959. More is on-line at www.ardf2009.eu (BAFA)

**

WORLDBEAT: MEXICO CONTEST AND DX CLUB 4TH ANNIVERSARY

Members of the Mexican Contest and DX group will celebrate their 4th anniversary by using the special callsign 4A1DXXE between December 25th and January 6th of the new year. Activity will be on 160 through 6 meters using CW, SSB and RTTY. QSOs with this station are good for the DXXE Award. QSL via N7RO and the Logbook to the World. For more information visit www.dxxe.org. (OPDX)

**

DX

In DX, word that a team of six Italian team have been grated a license to operate from the region called Palestine territory from January 1st to the -11th. They will use the callsign E44M and will be active on 160 through 2 meters using CW, SSB, RTTY and all the digital modes with a maximum power of 1 kilowatt on each band. Operations will be focused on RTTY and the other digital modes, as well as the low bands and 30, 17 and 12 meters. The operators plan to pay special attention to stations outside Europe when the propagation will allow it. Pilot stations will be announced later. More is on line at www.dxcoffee.com/e44m

F4EGX, as FT5Y has been heard from the French scientific station "Dumont D' Urville." Nicolas doesn't know if he will spend Christmas at the station or on the boat headed home. He will be back in France around the New Year. If you worked him, QSL as directed on the air.

JA8BMK has gone QRT as T31DX from Central Kiribati and is now headed back to Christmas Island. He should be there around by the end of the week. Look for him to be active as T32YY again once he arrives. QSL direct to JA8BMK.

(Above from various DX sources)

**

HELPING HAMS: CHRISTMAS AND THE NORTH POLE NETWORK

And finally this week, it seems that radio propagation to the northern latitudes is always especially good near the end of December. That gives hams the chance to connect hospitalized children to a very special inhabitant of the frozen north. Newsline's Joe Moell K0OV has a report on this year's North Pole Network.

--

K0OV: When you talk with a station 'way up north at this time of year, do you hear the cold wind and the sound of reindeer hoofbeats? Well, the kids at Childrens Hospital of Orange County do, and they have been hearing it for 33 years.

WA6OPS: North Pole station, are you still on the air, Santa? This is WA6OPS.

SANTA (with cold wind): Ho, ho, ho, Santa copies you loud and clear at the North Pole station.

K0OV: And what happens next is pure magic. Santa already knows who is in the hospital that day, thanks to hard work by his elves.

WA6OPS: Hey Santa, signals are holding up well today. We're in room 316, do you happen to know who's in here with me?

SANTA: Ho, ho, ho, Santa certainly does. And I'm very happy because I want to say a very Merry Christmas to Cody Waters. Santa knows that he's going home today and Merry Christmas to his Mom and Dad also.

WA6OPS: You're Cody? That's great, do you want to say hi to Santa?

CODY: Hi Santa Claus!

SANTA: Merry Christmas Cody, and you have a very nice voice.

CODY: Merry Christmas to you too Santa Claus.

WA6OPS: Hey as long as we've got Santa on the radio and he's got his computer up, here's your chance to get in your last minute wishes.

CODY: "Piranha Panic," a board game please.

WA6OPS: Santa do the elves work on that stuff?

SANTA: Ho, ho, ho, oh yes, and Santa wants to say hello to Stacy [the nurse] also.

NURSE: Santa, he's been good for me today.

WA6OPS: Just today?

NURSE: Well I've just had him today, but I've heard from the other nurses and he deserves his piranha game.

WA6OPS: OK, so Cody's on the good list, right Santa?

SANTA: Ho, ho, ho, oh yes definitely, and a Merry Christmas to the nurse and thank you for being so good and kind to all the boys and girls at the hospital.

K0OV: Note that Santa has involved more than just the child. He's also talking to the family members and caregivers. Then he has to deal with some very noisy elves.

WA6OPS: What do you think about those elves, they're noisy aren't they? But you know, you look like you could be a good elf. Would you like to work up there? Yeah, he'd be a good elf worker, wouldn't he?

SANTA (with noisy elves): Ho, ho, ho, yes, he certainly would, and the elves would love to have him up here to help test out the toys before I get to deliver them. Every once in a while Santa has to go out in the workshop and tell them to calm down.

WA6OPS: Yeah, they get a little carried away. Santa, thanks for talking to us and from Cody and all the friends in the room ...

ALL: Merry Christmas!

SANTA: Merry Christmas to the Waters family.

K0OV: North Pole Network at Childrens Hospital began back in 1976 and hasn't missed a year since. This year, there were dozens of kids and it took seven hours to go from room to room and see them all, including the ones in the Pediatric Intensive Care Unit. It's a project of the Hospital Disaster Support Communications System, an ARES group that serves all 35 hospitals in the county when communications fail. This is the same group that helped evacuate respiratory patients from a hospital in Brea during the recent southern California firestorm.

From southern California, this is Joe Moell, K-zero-Oscar-Victor, for Amateur Radio Newsline.

--

You can read about the groups rescue radio work and the North Pole Network at the group's Web site, www.hdscs.org. That's short for Hospital Disaster Support Communications System, with a dot org. Click on North Pole to see photos from this year and all the way back to the beginning. (K0OV, ARNewsline")

>
> Dee, N8UZE

Dee,

You can avoid the problem: just take some sheet copper, some sheet zinc (preferably amalgamated), and an unglazed porcelain cup. Wind the zinc on the inside of the porcelain cup, and the copper on the outside. Immerse them both in sterile water, and then mix some copper sulphate in the water on the outside of the copper plate.

Short the zinc to the copper, wait an hour or three, and then you'll have a 1 volt primary cell that will outlast anything else you can buy.

HTH.

I want to mount a Yaesu FT-1500M 2-meter mobile
http://richbonnie.com/Radio.JPG (a photo I took)
http://tinyurl.com/9xyw5h (goes to yaesu's web site)
into my wife's 2004 Buick LeSabre. The dashboard is finished with
plastic panels everywhere, as you can see from these photos of the
interior:
http://richbonnie.com/Left.JPG
http://richbonnie.com/Right.JPG
There is no unfinished under-dash area as there used to be in older
cars.

I am looking for suggestions on how to mount the radio with minimum
damage to the vehicle, so that it is not in the way of people's legs,
but it is within easy reach to control the radio.

Maybe on the floor nearly vertical?

Dick, AC7EL

Can you do without the ash tray? Most of them slide out completely and leave a good-sized hole with reasonable access to something structural to mount to. I've had rather nice installations based on ash-tray openings in a couple of vehicles.

Don't think it will fit into my watches.

Dick,
I faced the same problem. In my Subaru Forester there
seemed to be no good place to put it in mounted fashion.

I solved the problem in an unusual way. I only have "passengers" in
about 10% of my driving and typically don't use the radio when I
have a passenger.

I made a "mounting platform" that would sit on the passenger seat
and that would allow me to see the front of the unit from the
seat of an old wood chair. It was heavy enough to prevent it
from sliding on an unexpected stop. Further, it with radio and
all cables can easily be put in the back seat without being
disconnected (and restored to its rightful place when no
passengers are present). Should I have passengers in
both front and back, I have only to disconnect antenna and power
cables and put it in the "way-back". Total cost: $0 for the
"platform".

Build a console in place of the Ash tray to the floor. You can use thin wood panels and metal angle stock and finish in grey naugahyde over foam padding. Beware of plastic air ducting under the carpet though and be shure to make it easily removable for upgrades and repair and allow for airflow and cooling to the rig. That way you can also move the power ports to the console and make cup holders.
